EN	When installing equipment with a voltage exceeding the low voltage in the distributor door, the cross-section of the continuous protective conductor connection depends on the largest cross-section of the supply line for the equipment installed in the door	DE	Bei Einbau von Betriebsmitteln höherer Spannung als Kleinspannung in die Verteilertür muss sich der Querschnitt der durchgehenden Schutzleiterverbindung nach dem größten Querschnitt der Zuleitung zu den in der Tür angebrachten Betriebsmitteln richten
FR	Lorsque des appareils de tension supérieure à la très basse tension sont montés dans la porte de l'armoire de distribution, le diamètre du conducteur de protection sortant doit être dimensionné en fonction du diamètre du câble d'alimentation des appareils installés dans la porte.	ES	Si en la puerta del armario de distribución se monta material eléctrico para una tensión superior al nivel de muy baja tensión, entonces la sección ininterrumpida de la conexión al conductor de protección deberá ser similar a la mayor sección del cable de alimentación que va al material eléctrico montado en la puerta
IT	Per l'installazione di apparecchiature nella porta del quadro di distribuzione che hanno una tensione maggiore della bassissima tensione, la sezione del conduttore di terra deve essere scelta in funzione della sezione più grande del cavo di alimentazione alle apparecchiature installate nella porta.	PT	Em caso de montagem de meios operacionais com uma tensão mais alta do que a baixa tensão na porta do quadro de repartição, a secção transversal da ligação contínua do condutor de proteção tem de estar em conformidade com a maior secção transversal do cabo de alimentação para os meios operacionais instalados na porta
TR	Düşük gerilimden daha yüksek gerilimdeki işletme araçlarının dağıtıci kapısına takılması durumunda, boydan boyanın topraklama iletkeni bağlantısının kesiti, kapıya takılan işletme araçlarının besleme hattının en büyük kesitine göre belirlenmelidir	RU	При установке электрооборудования с более высоким напряжением, чем малое напряжение в двери распределительного щита, поперечное сечение проходящего соединительного провода защитного заземления должно соответствовать наибольшему поперечному сечению питающей линии электрооборудования, установленного в двери распределительного щита.
PL	W przypadku, gdy w drzwiach rozdzielacza montowane są urządzenia robocze o napięciu wyższym niż napięcie małe, przekrój niedzielnego połączenia przewodu ochronnego musi być dopasowany do największego przekroju przewodu doprowadzającego do zamontowanych w drzwiach urządzeń roboczych	中	如果安装的运行设备的电压高于配电盘门所带的低电压，那么整个 PE 线的横截面必须与连接安装在门上的运行设备的最大导线横截面对应。
