Summary of Changes

This publication contains the following new or updated information. This list includes substantive updates only and is not intended to reflect all changes.

Topic	Page
Updated accessory selection and specification information	throughout
Added accessories for Bul 700-FE timing relays	103
Added accessories for Bul. 700-N relays	173

Rockwell Automation recognizes that some of the terms that are currently used in our industry and in this publication are not in alignment with the movement toward inclusive language in technology.

We are proactively collaborating with industry peers to find alternatives to such terms and making changes to our products and content. Please excuse the use of such terms in our content while we implement these changes

Timing Relays

Relay Type	Contact Arrangement	Contact Style	Contact Material	NEMA Pilot Duty	AC and DC Switching Capability													
					1 mA	10 mA	50 mA	100 mA	1 A	3 A	5 A	10 A	20 A	25 A	30 A	35 A		
700-FE	1 N.O.	single	AgCdO	D300			10V	AC DC (24V Max)										
700-FS	1, 2 form C	single	AgCdO	B300			10V	AC DC (24V Max)										

General Purpose Relays

Relay Type	Contact Arrangement	Contact Style	Contact Material	NEMA Pilot Duty	AC and DC Switching Capability													
					1 mA	10 mA	50 mA	100 mA	1 A	3 A	5 A	10 A	20 A	25 A	30 A	35 A		
700-HA	2, 3 form C	single	AgNi	B300			10V	AC DC (24V Max)										
700-HAX	2, 3 form C	bifurcated	Au/AgNi	B300	6V	AC DC (24V Max)												
700-HB	2, 3 form C	single	AgNi	B300			10V	AC DC (24V Max)										
700-HC14	4 form C	single	Ag/Au	C300 Q300	10V	AC DC (30V Max)												
700-HC22	2 form C	single	AgNi	B300 Q300		10V	AC DC											
700-HC24	4 form C	single	AgNi	C300 Q300		10V	AC DC (30V Max)											
700-HD	2, 3 form C	single	AgCdO	B300			10V	AC DC (24V Max)										
700-HF	2, 3, 4 form C	single	AgCdO	B300			10V	AC DC (30V Max)										
700-HG	1 form X, 1 form C, 2 form A, 2 form C	single	AgNi	A600			10V	AC DC (28V Max)										
700-HHF45	1 form X	single	AgNi	A600			10V	AC DC (28V Max)										
700-HHF62	2 form C	single	AgNi	B600			10V	AC DC (28V Max)										
700-HHF73	3 form C	single	AgNi	B300			10V	AC DC (28V Max)										

General Purpose Relays (Continued)

Relay Type	Contact Arrangement	Contact Style	Contact Material	NEMA Pilot Duty	AC and DC Switching Capability											
					1 mA	10 mA	50 mA	100 mA	1 A	3 A	5 A	10 A	20 A	25 A	30 A	35 A
700-HJ	1, 2 form C	single	AgCdO	—			10V	AC DC (24V Max)

NEMA Definitions for Contact Arrangements

Contact Arrangement	Description	Diagram
Form A	A Form A contact arrangement is one that has single-pole, single-throw, normally open contacts. The function of this arrangement is to close a circuit when actuated.	
Form B	A Form B contact arrangement is one that has single-pole, single-throw, normally closed contacts. The function of this arrangement is to open a circuit when actuated.	
Form C	A Form C contact arrangement is one that has single-pole, double-throw contacts with three terminals - one for normally open, one for normally closed, and one common. The function of this arrangement is to transfer a circuit when actuated.	
Form X	A Form X contact arrangement is one that has single-pole, single-throw, normally open double-make contacts. The function of this arrangement is to close a circuit when actuated.	
Form Y	A Form Y contact arrangement is one that has single-pole, single-throw normally closed double-break contacts. The function of this arrangement is to open a circuit when actuated.	
Form Z	A Form Z contact arrangement is one that has single-pole, double-throw, contacts with four terminals – two for normally open and two for normally closed. The function of this arrangement is to open one circuit and close the other.	

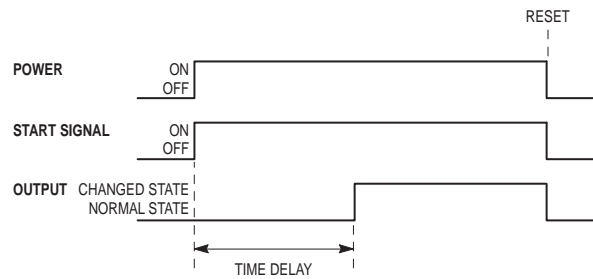

Timing Relay Selection Criteria

Single-function Timers: Timers that have only 1 timing mode (for example, On-delay or OFF-Delay).

Multi-function Timers: Timers that have 4...8 timing modes that are selected by turning the mode selection switch.

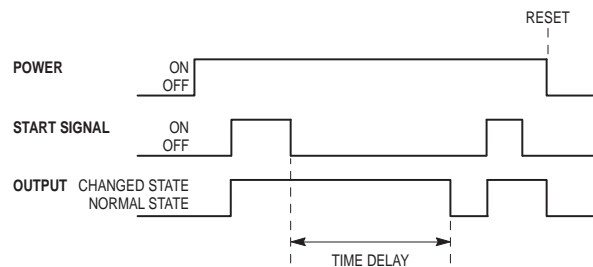

On-delay or (Delay on Operate)

When power is applied continuously (or when power and a start signal are applied), the timing cycle begins. The output contacts change state after the time delay is completed. The contacts return to their normal state when a reset signal is applied or power is removed.

OFF-Delay or (Delay on Release)

Power is applied continuously. When a start signal is applied, the output contacts change state immediately. When the start signal is removed, the timing cycle begins. The output contacts return to their normal state once the time delay is completed. Reset occurs when a reset signal is applied or power is removed.

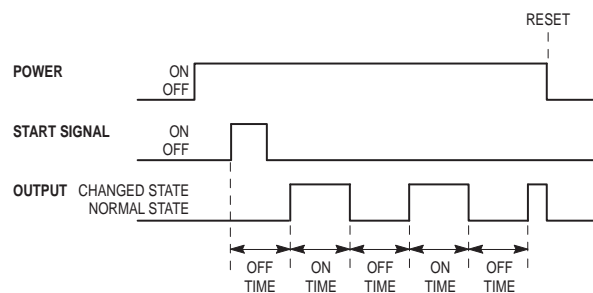

One Shot or (Repeat Cycle)

Power is applied continuously. When a start signal is applied, the output contacts change state immediately and the timing cycle begins. The output contacts return to their normal state once the time delay is completed. Reset occurs when a reset signal is applied or power is removed.

Repeat Cycle or (Flicker)

Power is applied continuously. When a start signal is applied, the timing cycle begins. When the time delay is completed, the output contacts change state and the next timing cycle begins. This cycle repeats until a reset signal is applied or power is removed.

Flexibility

Mounting – Timing relays are available in several different models. They can be plugged into the same socket as the relay, or use a separate plug-in socket mounting.

Contacts – The contacts are of various types and ratings. See the appropriate specification pages for more details.

Functionality – Timing relays with multi-range and multi-function capability are available. This capability lets you stock one relay to cover a wide variety of applications.

External Trigger Switch – OFF-Delay, One-Shot, and other timer functions require an external trigger switch (from a relay or push button) to control the timing function. The external trigger switch causes the timing function to start. In OFF-Delay, the trigger switch closes to energize the output and when the trigger switch opens the OFF-Delay starts to time out. At the end of the time delay, the output is de-energized and the output contacts return to their shelf state.

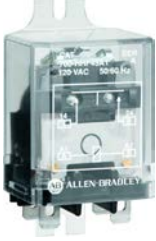

Surge Suppression Information

Photo	Cat. No.	For use with	Suppression Technique	Max Relay Contact Dropout Time	Max Transient Voltage Relative to System Voltage

700-HA General-purpose Relays

- 10 A contact rating
- DPDT, 3PDT
- Pin-style terminals
- Standard ON/OFF flag indicator
- Options: LED, push-to-test and manual override, socket-mounted surge suppressor module, or multi-function timer
- Contact choices: standard silver nickel, or bifurcated silver nickel with gold plating

Certifications	<ul style="list-style-type: none"> cURus Recognized (File No. E14843, Guide NRNT2/NRNT8) CE Marked
Standards Compliance	<ul style="list-style-type: none"> UL508, CSA C22.2 No. 14 EN 61810-1

Timing Chart

Terms:

- **U** is Power Input
- **R** is Relay Output
- **S** Signal, +A1 Socket, B1 Timer
- **t** is the resulting Time Delay (Red light-emitting diode)

700-HT3 Multi-function Time Module (t = Time Range 0.05 s...100 h)

Timing Mode	Description	Timing Chart	DIP Switch Selection	Wiring
1. Power On-delay	Apply power (U) to timer. Relay contacts (R) change state after time delay (t) is complete. Contacts return to their shelf state when power is removed. Terminal B1 is not used in this mode			
2. Power On One-shot	Apply power (U) to timer. Relay contacts (R) change state immediately and the time delay begins. When the time delay (t) is complete, contacts return to their shelf state. Contacts return to their shelf state when power is removed. Terminal B1 is not used in this mode.			
3. Power On Repeat Cycle, On Start	Apply power (U) to timer. Relay contacts (R) change state immediately and the time delay (t) begins. When the time delay is complete, the contacts return to their shelf state for time delay (t) (time on = time off). This cycle repeats until the power is removed. Terminal B1 is not used in this mode			
4. Signal On-delay and Signal Off-delay	Apply power (U) to timer. When the signal (S) is closed the time delay (t) begins, after the time delay is completed the relay contacts (R) change state. Opening the signal starts the time delay. After the time delay is completed, the contacts return to their shelf state. If the signal is closed or opened before the time delay is complete, the time delay is reset. Contacts return to their shelf state when power is removed.			
5. Signal Off-delay	Apply power (U) to timer. When the signal (S) is closed, the relay contacts (R) change state immediately. When the signal is opened, the time delay (t) begins. If the signal is closed before the time delay is complete, the time delay is reset and the relay remains energized. When the time delay is complete, the contacts return to their shelf state. Contacts return to their shelf state when power is removed.			
6. Signal On One-shot	Apply power (U) to timer. When the signal (S) is closed, the relay contacts (R) change state immediately and the time delay (t) begins. After the time delay begins, opening or closing the signal does not reset the time delay. When the time delay is complete, the contacts return to their shelf state. Contacts return to their shelf state when power is removed.			
7. Signal Off One-shot	Apply power (U) to timer. When the signal (S) is closed and then opened, the relay contacts (R) change state immediately and the time delay (t) begins. After the time delay begins, opening or closing the signal does not reset the time delay. When the time delay is complete, the contacts return to their shelf state. Contacts return to their shelf state when power is removed.			
8. Signal On and Signal Off Watchdog Monitor	Apply power (U) to timer. When the signal (S) is closed, the relay contacts (R) energize immediately and the time delay (t) begins. If the signal is opened before the time delay is complete, the relay remains energized and the time delay is reset. When the time delay is completed, the contacts return to their shelf state. If the signal is opened after the time delay is complete, the relay contacts energize immediately and the same time delay begins. Continuous cycling of the signal at a rate that is faster than the time delay causes the relay contacts to remain energized. Contacts return to their shelf state when power is removed.			

Approximate Dimensions

Approximate dimensions are shown in millimeters (inches). Dimensions are not intended for manufacturing purposes.

700-HK Slim Line Relay

- 8 A/16 A contact ratings
- Retainer clip with sockets
- Standard ON/OFF flag indicator
- Relay faceplate accepts optional Bulletin1492 snap-in markers
- Options: LED, push-to-test and manual override, socket-mounted surge suppressor module, or timer module
- DPDT/SPDT
- Plug-in blade-style terminals (2.5 x 0.5 mm)
- Maximum duty version available
- Choice of standard silver/nickel contacts or silver/nickel with gold plated contacts

700-HL Terminal Block Relay

- Relay and socket assembled interface modules for high-density interposing or isolation applications
- Screw terminal and spring-clamp bases
- 6 A relay, choice of silver or gold contacts
- 2 A solid-state relay – DC output
- 2 A solid-state relay – AC output
- SPDT (relay), 1 N.O. (solid-state)
- Built-in retainer clip and snap-in marker lever
- Standard LED, reverse polarity protection, and surge protection
- Externally replaceable relay modules
- Unique leakage current suppression version to address industry concerns of nuisance coil turn-on or contact non-drop out when connecting to PLCs with leakage current
- Available with hazardous location certification

Certifications	UL, cULus, cURus, ABS, CE			

(1) Diode surge protection provided.

(2) Reverse polarity on the output terminals of the solid-state relay results in the output being "ON" regardless of the state of the input voltage.

(3) For Gold-plated contacts: Add the letter "X" at the end of the catalog number. For example: if Cat. No. 700-HLT1Z24 is required with gold plating, the new cat. no. is 700-HLT1Z24X.

Approximate Dimensions

Approximate dimensions are shown in millimeters (inches). Dimensions are not intended for manufacturing purposes.

Figure 43 - 700-HLT/-HLS Screw Terminal Design

Single Wire: 0.14 mm²...2.5 mm² (#26 AWG...#14 AWG)
 Double wire: 2 x 0.14 mm²...2.5 mm² (#26 AWG...#14 AWG)
 Wire Type: Solid or stranded, copper only
 Strip Length: 9 mm (11/32 in.)
 Tightening torque: 0.5 N·m (4.4 lb·in)

Figure 44 - 700-HLT/-HLS Spring Terminal Design

Single Wire: 0.2 mm²...2.5 mm² (#24 AWG...#14 AWG)
 Wire Type: Solid or stranded, copper only
 Strip Length: 9 mm (11/32 in.)

Figure 45 - Cat. No. 199-DR1 DIN Mounting Rail, Series B

700-HL_N Next Generation Terminal Block Relay

- Relay and socket assembled interface modules for high-density interposing or isolation applications
- Screw terminal and push-in terminal bases
- 6 A relay, choice of silver or gold contacts
- 2 A solid-state relay – DC output
- 2 A solid-state relay – AC output
- SPDT (relay), 1 N.O. (solid-state)
- Built-in retainer clip and snap-in marker lever
- Standard LED, reverse polarity protection, and surge protection
- Externally replaceable relay modules
- Universal input voltage versions
- Available with hazardous location certification

Standard built-in Features: <ul style="list-style-type: none"> • LED • Reverse Polarity Protection for DC Inputs • Coil Surge Protection⁽¹⁾ 				
	Cat. No. 700-HLTN1_	Cat. No. 700-HLTN2_	Cat. No. 700-HLSN1_	Cat. No. 700-HLSN2_
Specifications				
Output Type	SPDT (1 C/O); $I_{th} = 6 A^{(3)}$		1 N.O. solid-state; $I_{th} = 2 A, 24V DC$ or $I_{th} = 2 A, 240V AC$	
Recommended Tightening Torque	0.5 N•m max (4.4 lb•in)			
Wire Range	Screw Terminal: 0.14 mm ² ...2.5 mm ² (#26...#14 AWG), Push-in Terminal: 0.2 mm ² ...2.5 mm ² (#24...#14 AWG)			
Approvals	UL, cULus, cURus, ABS, CE			

(1) Diode surge protection provided.

(2) Reverse polarity on the output terminals of the solid-state relay results in the output being "ON" regardless of the state of the input voltage.

(3) For Gold-plated contacts: Add the letter "X" at the end of the catalog number. For example: if Cat. No. 700-HLTNU24 is required with gold plating, the new cat. no. is 700-HLTNU24X.

Approximate Dimensions

Approximate dimensions are shown in millimeters (inches). Dimensions are not intended for manufacturing purposes.

Figure 46 - 700-HLTN/-HLSN Screw Terminal Design

Single Wire: 0.5 mm²...2.5 mm² (#21 AWG...#14 AWG)
 Double wire: 2 x 0.5 mm²...2 x 1.5 mm² (2 x #26 AWG...2 x #16 AWG)
 Wire Type: Solid or stranded, copper only
 Strip Length: 10 mm (0.4 in)
 Tightening torque: 0.5 N•m (4.4 lb•in)

Figure 47 - 700-HLT/-HLS Spring Terminal Design

Single Wire: 0.5 mm²...2.5 mm² (#21 AWG...#14 AWG)
 Wire Type: Solid or stranded, copper only
 Strip Length: 9 mm (11/32 in.)

Figure 48 - Cat. No. 199-DR1 DIN Mounting Rail, Series B

700-HL 2-pole Terminal Block Relay

- Relay and socket assembled interface modules for high-density interposing or isolation applications
- Screw terminal and spring-clamp bases
- 10 A relay, choice of silver or gold contacts
- DPDT (relay)
- Built-in retainer clip and snap-in marker lever
- Standard LED, reverse polarity protection, and surge protection
- Externally replaceable relay modules

		
Output Type	DPDT (2 C/O); $I_{th} = 10\text{ A}$	
Recommended Tightening Torque	0.6 N•m max (5.3 lb•in)	
Wire Range	Screw Terminal: 0.2...2.5 mm ² (#24...14 AWG), Spring Terminal: 0.2...2.5 mm ² (#24...14 AWG)	
Approvals	cULus, cURus, CE	

Product Selection

Input Voltages	Pkg. Quantity	Cat. No. ⁽¹⁾ (Screw Terminals)	Cat. No. (Spring Clamp Terminals)
12V DC	10	700-HLT12Z12	700-HLT22Z12
24V DC	10	700-HLT12Z24	700-HLT22Z24

Standards Compliance	<ul style="list-style-type: none"> • UL508 • CSA C22.2 No. 14, • EN 61812-1

Trigger Signal Cat. Nos. 700-HTA

Contact closure provides signal to timer. The 700-HTA alternating relay generates a low energy signal. For optimum reliability, use contacts designed for low energy switching (10V, 1 mA) (Example: Bul. 800F-X_V, 800T-X_V). No external voltage can be connected to the contact signal.

Figure 68 - Load Diagrams - 700-HTA Relays

700-FS High-Performance Timing Relay

- Adjustable function and timing range timing relays
 - Timing Ranges From 0.05 s...300 h
- DIN Rail mounted without cost of socket
- 22.5 mm wide multi-function or single functions
- Available as SPDT or DPDT contact output, 5 A
- Coil surge protection
- Hazardous location version available

Switching Capacity	Voltage: 500V AC
	According to IEC 947-5-1:
	3 A/230V AC (inductive load, AC 15)
	2 A/24V DC (inductive load, DC 13)
	According to UL 508:
	1.5 A/250V AC (B300)
	3 A/120V AC (B300)
Life	Mechanical: 30 million operations
	Electrical: 100,000 operations at AC12, 230V, 4 A
State Indicator	1 LED, combination signal

(a) Time Characteristics (according to VDE 0435, Part 2021)

Table 94 - General Data

Insulation Characteristics	2 kV AC/50 Hz test voltage according to VDE 0435 and 4 kV 1.2/50 μ s surge voltage according to IEC 947-1 between all inputs and outputs
EMC/Interference Immunity	Performance of the following requirements: Surge capacity of the supply voltage according to IEC 61000-4-5: 2 kV Burst according to IEC 1000-4-4: 6 kV 6/50 ns ESD discharge according to IEC 61000-4-2: Contact 6 kV, air 8 kV
EMC/Emission	Electromagnetic fields according to EN 55 022: class B
Safe Isolation	According to VDE 106, part 101
Relative Humidity	25... 85%
Vibration Resistance, operating	1 G
Vibration Resistance, nonoperating	4 G
Shock Resistance, operating	7 G
Shock Resistance, nonoperating	50 G
Ambient Temperature, operating	-25...+60 °C
Ambient Temperature, nonoperating	-40...+85 °C
Terminals	Tightening torque 5.31...7.08 lb•in (0.6...0.8 N•m) 1 x 0.5...2.5 mm ² (stranded) / 1 x 0.5...4 mm ² , 2 x 0.5...2.5 mm ² (solid)
Mounting	Front mounting; For snap-on mounting on 35 mm DIN Rail or screw fixing by adapter and 2 screws (M4 type)
Weight	100 g (3.5 oz)
Certifications	cULus Listed (File No. E14840, Guide NKCR/NKCR7), CE Marked
Standards Compliance	EN/IEC 60947-1, EN/IEC 60947-5-1, UL 508, CSA 22.2 No. 14

		Temp. Code T4A 2 A 32V DC max
--	--	----------------------------------

Mounting: Install the product in an enclosure constructed in accordance with the requirements of EN50021.

Approximate Dimensions

Approximate dimensions are shown in millimeters (inches). Dimensions are not intended for manufacturing purposes.

Specifications for Start, Gate, Reset Signal (Cat. Nos. 700-HR52, -HRT6, -HRV, -HRQR)

Start, Reset, and Gate signals are typically contact closures or signals from a solid-state sensor.

(R) Reset Signal

The reset signal is not required for normal operation. Reset can be accomplished by removing power from the timing relay. To reset the timer without removing power, a signal must be applied which resets the timing cycle and returns the output contacts to their shelf state. The reset signal overrides both the start signal and gate signal. The reset signal can be either momentary or maintained.

(G) Gate Signal

The gate signal is not required for normal operation. The gate signal provides a pause or retentive timing function. When the gate signal is applied, the timing cycle is momentarily interrupted. When the signal is removed, the timing cycle resumes timing at the point the cycle was interrupted and continues timing until the time delay is completed or the gate signal is reapplied.

Contact Signal – Cat. Nos. 700-HR52, -HRT6, -HRQR

Contact closure provides signal to timer. A low energy signal is generated by the 700-H timing relay. For optimum reliability, use contacts designed for low energy switching (5V, 1 mA) (Bul. 800F-X V, 800T-X V). No external voltage should be connected to the contact signal.

Contact Signal – Cat. No. 700-HRV

For use in applications where it is not possible to use contacts designed for low energy switching. Contact closure provides signal to timer. A signal is generated by the 700-h timing relay, and is the same potential as the supply voltage of the timing relay. No external voltage should be connected to contact signal. 700-HRV52TU24 supply voltage: 24...48V AC, 12...48V DC / 700-HRV52TA17 supply voltage: 100...240V AC, 100...125V DC.

Solid-state Signal – Cat. Nos. 700-HR52, -HRT6

Timing relay is suitable for use with a 3-wire NPN 12...24V DC sensor. Supply voltage potential of sensor must be the same as the supply voltage potential of the timing relay. Permissible off-state leakage current from sensor: 0.01 mA max

Solid-state Signal – Cat. No. 700-HRV

Timing relay is suitable for use with a 3-wire NPN or PNP 12...24V DC sensor. Supply voltage potential of sensor must be the same as the supply voltage potential of the timing relay. Permissible off-state leakage current from sensor: 0.01 mA max

Signal Specifications

Circuit Impedance	Circuit impedance can be used to calculate the maximum wiring distance from the signal switch to the timing relay, for example. Permissible signal-ON impedance: 1 kΩ max Permissible signal-OFF impedance: 100 kΩ min				
Power-OFF Reset	Min power-off time: 0.1 s, Reset Voltage: 10% max of rated voltage				
Signal Duration	Min pulse width: 0.05 s				
Signal Options		700-HR52	700-HRT6	700-HRV5	700-HRQR
	Start	X	X	X	—
	Reset	X	X	—	X
	Gate	X	X	—	—

Timing Charts

Mode A – On-delay

- Needs continuous input power applied.
- Timing is initiated by the leading edge of the start signal.
- Contacts change state after timing is complete.
- Additional start signals during timing don't reset timing or contacts.
- When the input power is removed contacts return to shelf state.

Mode B – Repeat Cycle, Off Start

- Need continuous input power applied.
- Timing is initiated by the leading edge of the start signal. Additional start signals during timing do not reset timing or contacts.
- For the first time period the contacts remain in their shelf state. When that time period is complete contacts change state for the same time period (time on = time off).
- This cycle repeats itself until input power is removed or reset signal is applied. When the input power is removed or reset signal is applied contacts return to the shelf state.

Mode B2 – Repeat Cycle On start

- Need continuous input power applied.
- Timing is initiated by the leading edge of the start signal. Additional start signals during timing do not reset timing or contacts.
- For the first time period the contacts change state. When that time period is complete contacts return to the shelf state for the same time period (time on = time off).
- This cycle repeats itself until input power is removed or reset signal is applied. When the input power is removed or reset signal is applied contacts return to the shelf state.

Mode C – Watchdog monitor (Trigger = Signal On/Off)

- Need continuous input power applied.
- Contacts change state immediately when start signal is applied or when start signal is removed (only if timing cycle was complete).
- Timing is initiated at the leading edge of the start signal. After the first timing cycle is complete, timing is initiated by the trailing edge of the start signal.
- At the end of the time period contacts return to the shelf state.
- Relay timing is reset when additional start signals are applied while the relay is timing. Contacts remain in energized state.
- When the input power is removed contacts return to the shelf state.

Mode D – Off-delay (Trigger = Signal Off)

- Need continuous input power applied.
- Contacts change state immediately when start signal is applied.
- Timing is initiated by the trailing edge of the start signal.
- At the end of the time period contacts return to the shelf state.
- Relay timing is reset when additional start signals are applied while the relay is timing. Contacts remain in energized state.
- When the input power is removed contacts return to the shelf state.

Mode E – One-Shot (Trigger = Signal On) 700-HR52, -HRV, and -HRT6

- Need continuous input power applied.
- Timing is initiated by the leading edge of the start signal.
- Contacts change state immediately when start signal is applied.
- At the end of the time period contacts return to the shelf state.
- Relay timing is reset when additional start signals are applied while the relay is timing. Contacts remain in energized state.
- When the input power is removed contacts return to shelf state.

Mode E – One-Shot (Trigger = Power On) 700-HRS, -HRP, and -HRT4

- a. Need continuous input power applied.
- b. Timing is initiated when the input power is applied.
- c. At the end of the time period contacts return to the shelf state.
- d. Relay timing is reset when input power is removed.

Mode G – Watchdog Monitor (Trigger = Signal ON/OFF)

- a. Need continuous input power applied.
- b. Timing is initiated by the landing edge of the start signal.
- c. After the first timing cycle is complete the contacts change state and timing is initiated by the trailing edge of the start signal.
- d. At the end of the time period the contacts return to the shelf state.
- e. Relay timing is reset when additional start signals are applied while the relay is timing.
- f. When the power is removed contacts return to the shelf state.

Mode J – Delayed One-Shot (Trigger = Power On)

- a. Need continuous input power applied.
- b. No start signal applied.
- c. Timing is initiated when input power is applied.
- d. Contacts change state after the timing for a fixed time of 1 s +/-0.5s
- e. At the end of the 1 sec period the contacts return to the shelf state.
- f. When the input power is removed contacts return to the shelf state.

Mode Star-Delta

- a. Need continuous input power applied.
- b. No start signal required. Timing is initiated when input power is applied.
- c. Star output contact changes state when input power is applied.
- d. After timing is complete star output contact returns to the shelf state then both the star and delta contacts remain in shelf states until transfer time setting is complete.
- e. Delta output contact changes state after transfer time is complete.
- f. Instantaneous contact changes state when input power is applied.
- g. All contacts return to the shelf state when input power is removed.

Mode True Off-delay (Trigger = Power Off)

- a. Continuous input power is NOT required.
- b. No start signal applied.
- c. Contacts change state immediately when input power is applied.
- d. Timing starts when input power is removed.
- e. At the end of the time period contacts return to the shelf state.
- f. Relay timing is reset when input power is reapplied while the relay is timing. Contacts remain in energized state.

Approximate Dimensions

Approximate dimensions are shown in millimeters (inches). Dimensions are not intended for manufacturing purposes.

Trigger Signal

Contact closure provides signal to timer. A low energy signal is generated by the 700-HT timing relay. For optimum reliability, use contacts designed for low energy switching (10V, 1 mA) (Bul. 800F-X__V, 800T-X__V). No external voltage should be connected to the contact signal.

Timing Diagrams

Figure 96 - Timing Diagrams for 700-HT Relays

Approximate Dimensions

Approximate dimensions are shown in millimeters (inches). Dimensions are not intended for manufacturing purposes.

	Power reset	Minimum power-opening time: 0.5 s (Except for A-3, B-1, and F mode)

Table 102 - General Ratings (Continued)

Attribute	700-HX
Control output	SPDT contact output: 5 A at 250V AC, resistive load (cosine=1) Minimum applied load: 10 mA at 5V DC (failure level: P, reference value)
External Power Supply	No
Key Protect	Yes
Memory Backup	EEPROM (overwritten 100 000 times min), which can store data for 10 years min
Accuracy of Operating Time and Setting Error ⁽¹⁾	Power-ON start: ±0.01% ±50 ms max to be rated against set value Signal start: ± 0.005% ±30 ms max to be rated against set value Signal start at transistor output model: ±0.005% ±3 ms max ⁽²⁾ If the set value is within the sensor waiting time (250 ms max)

(1) The values are based on the set value.

(2) The value is applied for a minimum pulse width of 1 ms.

Table 103 - Environmental and Construction Ratings

Attribute	700-HX	
Environmental		
Installation environment	Setup category II, pollution degree 2 (as per IEC61010-1)	
Ambient temperature	-10...+55 °C (14...141 °F), Avoid freezing or condensation	
Ambient humidity	25...85 %	
Storage temperature	-25...+65 °C (-13...+149 °F), Avoid freezing or condensation	
Altitude, max	2000 m	
Characteristics ⁽¹⁾		
Insulation Resistance	100 mΩ min (at 500V DC)	
Dielectric Strength	2000V AC, 50/60Hz for 1 min between current-carrying terminals and non-current-carrying metal parts (1000V AC for 24V AC/12 to 24V DC type), 1000 24V AC, 50/60 Hz for 1 min between non-continuous contacts	
Noise Immunity	±1.5 kV (between power terminals) for 100...240V AC, ±480V for 24VAC/12...24V DC, and ±600V (between input terminals), square-wave noise by noise simulator (pulse width: 100 ns/1 μs, 1-ns rise)	
Static Immunity	±8 kV (malfunction), ±15 kV (destruction)	
Vibration Resistance	Malfunction	
Shock Resistance	Malfunction	
Life Expectancy	Mechanical	10 million operations min (under no load at 18 000 operation/h)
	Electrical	100 000 operations min (5 A at 250V AC, resistive load at 1800 operation/h)
EMC	(EMI)	EN61812-1
	Emission Enclosure:	EN55011 Group1 class A
	Emission AC mains:	EN55011 Group1 class A
	(EMS)	EN61812-1
	Immunity ESD:	EN61000-4-2: 4 kV contact discharge (level2) 8 kV air discharge (level3)
	Immunity RF-interference:	EN61000-4-3: 10V/m
Enclosure Ratings	Panel surface: IP66 and NEMA Type 4 (indoors) ⁽²⁾	
Weight	Approx. 100 g	
Certifications	CE Certified; cURus (File No. E14843, Guide NRNTZ/NRNT8), C-Tick Marked	
Standards	EN61010-1, EN 61326, VDE0106/P 100, CSA C22.2 No. 14, UL 508	

(1) More information in the 700-HX User Manual, publication [700-UM002](#).

(2) An attached waterproof packing is necessary to achieve IP66 waterproofing between the 700-HX and installation pan.

Timing Charts

Output Mode A Mode: Signal ON-Delay (Timer resets when power comes ON.)

Timing starts when the start signal goes ON. While the start signal is ON, the timer starts when power comes ON or when the reset input goes OFF. The control output is controlled using a sustained or one-shot time period.

Basic Operation

*Output is instantaneous when setting is 0.
** Start signal input is enabled during timing.

Output Mode A-1: Signal ON-Delay 2 (Timer resets when power comes ON.)

Timing starts when the reset input goes ON and is reset when the start signal goes OFF. While the start signal is ON, the timer starts when the power comes ON or when the reset input goes OFF. The control output is controlled using a sustained or one-shot time period.

Basic Operation

*Output is instantaneous when setting is 0.

Output Mode A-2: Power ON Delay 1 (Timer resets when power comes ON)

Timing starts when the reset input goes OFF. The start signal disables the timing function (i.e., same function as the gate input). The control output is controlled using a sustained or one-shot time period.

Basic Operation

*Output is instantaneous when setting is 0.

Output Mode A-3 Power ON Delay 2 (Timer does not reset when power comes ON)

Timing starts when the reset input goes OFF. The start signal disables the timing function (i.e., same function as the gate input). The control output is controlled using a sustained or one-shot time period.

Basic Operation

*Output is instantaneous when setting is 0.

* Gate not included on any mode of this relay.

Output Mode B: Repeat Cycle (Timer resets when power comes ON.)

Sustained Output

Timing starts when the start signal goes ON. The status of the control output is reversed when time is up (OFF at start). While the start signal is ON, the timer starts when the power comes ON or when the reset input goes OFF.

Basic Operation

* Normal output operation will not be possible if the set time is too short. Set the value to at least 100 ms (contact output type).
** Start signal input is disabled during timing.

One-Shot Output

Timing starts when the start signal goes ON. The control output is turned ON when time is up. While the start signal is ON, the timer starts when the power comes ON or when the reset input goes OFF.

Basic Operation

* Normal output operation will not be possible if the set time is too short. Set the value to at least 100 ms (contact output type).
** Start signal input is disabled during timing.

Output Mode B-1: Repeat Cycle 2 (Timer does not reset when power comes ON)

Sustained Output

Timing starts when the start signal goes ON. The status of the control output is reversed when time is up (OFF at the start). While the start signal is ON, the timer starts when the power comes ON or when the reset input goes OFF.

Basic Operation

* Normal output operation will not be possible if the set time is too short. Set the value to at least 100 ms (contact output type).
** Start signal input is disabled during timing.

One-Shot Output

Timing starts when the start signal goes ON. The control output comes ON when time is up. While the start signal is ON, the timer starts when the power comes ON or when the reset input goes OFF.

Basic Operation

* Normal output operation will not be possible if the set time is too short. Set the value to at least 100 ms (contact output type).
** Start signal input is disabled during timing.

* Gate not included on any mode of this relay.

Output Mode D: Signal OFF-Delay (Timer resets when power comes ON.)

The control output is ON when the start signal is ON (except when the power is OFF or the reset is ON).
The timer is reset when the time is up.

Basic Operation

* Output functions only during start signal input when setting is 0.
** Start signal input is enabled during timing.

Output Mode E: Interval (Timer resets when power comes ON.)

Timing starts when the start signal comes ON.
The control output is reset when time is up.
While the start signal is ON, the timer starts when power comes ON or when the reset input goes OFF.

Basic Operation

* Output is disabled when the setting is 0.
** Start signal input is enabled during timing.

Output Mode F: Cumulative (Timer does not reset when power comes ON)

Start signal enables timing (timing is stopped when the start signal is OFF or when the power is OFF).
A sustained control output is used.

Basic Operation

*Output is instantaneous when setting is 0.

★ Gate not included on any mode of this relay.

Z Mode

Output quantity can be adjusted by changing the cycle time set in the adjustment level to 1 and by changing the ON duty (%) set value. The set value shows the ON duty (%) and can be set to a value between 0 and 100 (%). When the cycle time is 0, the output is always OFF. When the cycle time is not 0 and when ON duty has been set to 0 (%), the output is always OFF. When ON duty has been set to 100 (%), the output is always ON.

Z mode: ON/OFF-duty Adjustable Repeat Cycle

Timing starts when the start signal goes ON. The status of the control output is reversed when time is up (ON at start). While the start signal is ON, the timer starts when power comes ON or when the reset input goes OFF.

Basic Operation

- * Normal output operation will not be possible if the set time is too short. Set the value to at least 100 ms (contact output type).
- ** Start signal input is enabled during timing.

Output Mode S: Stop Watch (Timer resets when power comes ON)

The signal starts and stops timing. The display is held and timing is continued if the reset or gate input is received during timing operation. The timer resets if the reset or gate input is received when the timing operation is stopped.

Basic Operation

Note: Output is instantaneous when setting is 0.

Output Mode T OFF: Twin Timer OFF start

Timing starts when the start signal goes ON. The status of the control output is reversed when time is up (OFF at start). While the start signal is ON, the timer starts when power comes ON or when the reset input goes OFF.

Basic Operation

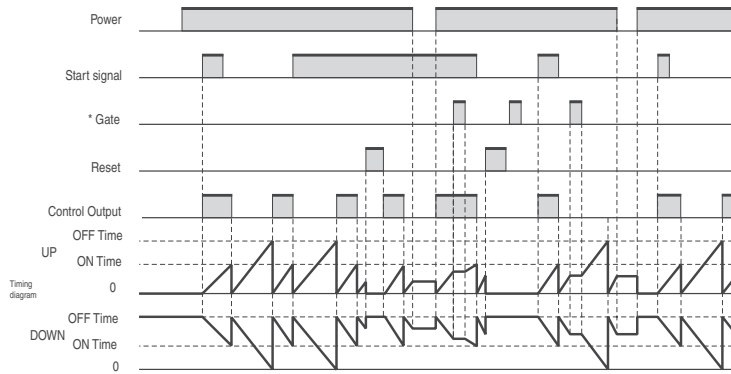

- * Normal output operation will not be possible if the ON/OFF set time is too short. Set the value to at least 100 ms (contact output type).
- ** Start signal input is disabled during timing.

* Gate not included on any mode of this Relay.

Output Mode T ON: Twin Timer ON start

Sustained Output

Timing starts when the start signal goes ON.
The status of the control output is reversed when time is up (ON at start).
While the start signal is ON, the timer starts when power comes ON or when the reset input goes OFF.

Basic Operation

* Normal output operation will not be possible if the ON/OFF set time is too short. Set the value to at least 100 ms (contact output type).
** Start signal input is disabled during timing.

Output Mode TOFF-1: Flicker OFF start 2 (Timer does not reset when power comes ON)

Timing starts when the start signal goes ON.
The status of the control output is reversed when time is up (OFF at start).
While the start signal is ON, the timer starts when the power comes ON or when the reset input goes OFF.

Basic Operation

* Start signal input is disabled during timing.

Note: Normal output operation will not be possible if the set time is too short. Set the value to at least 100 ms (contact output type).

Output Mode TON-1: Flicker ON start 2 (Timer does not reset when power comes ON)

Timing starts when the start signal goes ON.
The status of the control output is reversed when time is up (ON at start).
While the start signal is ON, the timer starts when the power comes ON or when the reset input goes OFF.

Basic Operation

* Start signal input is disabled during timing.

Note: Normal output operation will not be possible if the set time is too short.

★ Gate not included on any mode of this Relay.

Approximate Dimensions

Approximate dimensions are shown in millimeters (inches). Dimensions are not intended for manufacturing purposes.

700-P Industrial Relays

700-P – Direct-drive Convertible Contact Cartridge Relays

- NEMA and IEC ratings
- 600V maximum AC/DC
- Accessories for field installation: contact cartridges, adder decks, time delay, latching, surge suppressors, mounting strip
- Contact Ratings: (10 A) 700-CP1, (20 A) 700-CPM, (35 A) 700-CPH, (Low Power) 700-CPR
- For machine tool and other heavy-duty applications
- Can accommodate ring tongue terminals
- Integral DIN Rail mount on AC relays
- Finger-safe protection standard
- Factory supplied standard at 120V AC and 24V DC - user configurable for field assembly
- Blank relays are available in all coil voltages for field custom configuration
- Contact cartridge is convertible from N.O. to N.C. by simply turning the cartridge over.

The 700/700DC-P family of direct-drive Industrial Relays offers switching solutions ranging from 200 mA in low-energy circuits to 35 A in heavy-duty circuits. All contacts can easily be changed from the standard N.O. to N.C. configuration. The relays can be accessorized to meet the application needs with the use of time delayed contacts, mechanical latches, and NEMA enclosures. All devices are available in the most popular AC and DC control voltages. Combining different cartridges into one relay can yield a custom-tailored application solution. Relays are available without contact cartridges in all available AC and DC coil voltages for maximum flexibility.

700/700DC-P relays use standard (10 A) contact cartridges with a double-break and bifurcated design. Bifurcation provides excellent contact reliability and low-contact bounce, while the double-break contact design reduces the possibility of contacts welding and enhances the relay's ability to break DC circuits. These relays can be configured with a maximum of 12 contacts (only 8 may be N.C.).

A Modular Approach to Control Circuit Solutions

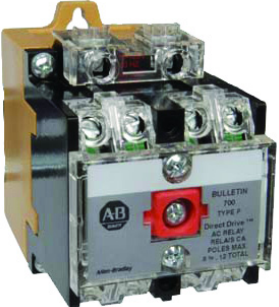

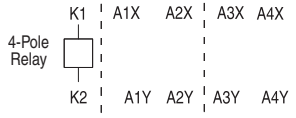

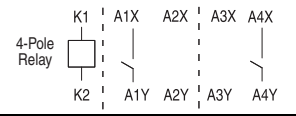

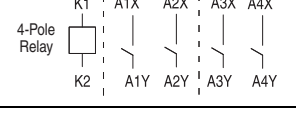

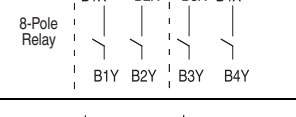

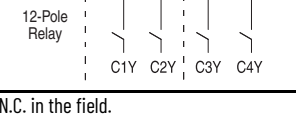

The 700-P AC control relay is factory assembled with standard 10 A contact cartridges, with all contacts as N.O. in either 2-, 4-, 8-, or 12-pole configurations with a 120V operating coil. Four-pole relays are also available at 240 and 480V AC and can have up to eight contacts added by using adder decks. The 700DC-P DC control relay is factory assembled with a standard 10 A contact cartridges, with all contacts as N.O. in either 4 or 8 poles with a 24V operating coil. The 4-pole version is also available with a 120V DC operating coil.

For control relays that require different contact ratings or control voltages we offer a modular design that is easily field configurable. A base blank relay (either AC or DC control), various contact kits, adder decks, and operating coils can be used to make an infinite number of custom control relay solutions.

- Master Control 700-PMCKIT master control cartridges provide (20 A) switching capability with large single-contact pads on each side of the spanner for twice the current rating to control heavy loads and provide for master control of a system. The cartridge also has the same double-break design as the standard 700-P relay contact cartridge. Relays can be configured with up to a maximum of 12 contacts (only 8 may be N.C.). Time delay and latching attachments are compatible with master cartridges.
- Heavy Duty Control 700-PHDKIT contact cartridges provide (35 A) switching capability through tandem contact cartridges. A jumper allows two (20 A) master contact cartridges to be connected in parallel. A maximum of six poles can be configured in a relay, only four of which can be normally closed. Time delay and latch attachments are available.
- Low Energy Control Logic Reed 700-PLRKIT contact cartridges provide switching to 200 mA @ 30V DC. These contacts are matched with standard control (10 A) contact cartridges for low energy switching applications.
- Overlapping Contact 700-POLKIT contact cartridges provide (10 A) switching capabilities with the same rating as the standard contact. These cartridge are used in pairs operate with the N.O. contact closing before the N.C. contact opens on pickup and vice versa on the dropout.

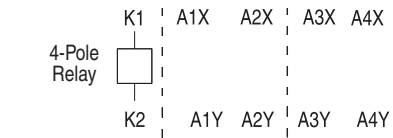

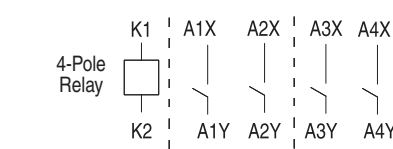

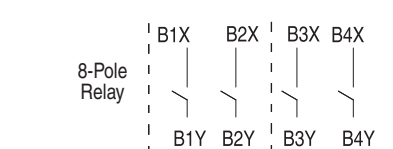

Direct-drive Convertible Contact Cartridge Relays

Master (20 A) and Heavy-duty (35 A) Contact Cartridge Options

Follow this process to order a relay that utilizes: 20 A master contact cartridges or 35 A heavy-duty contact cartridges

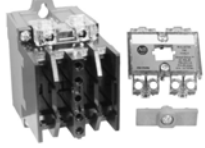

Base Blank Relay	+	Cartridge Kit	+	Adder Decks	+	Coil
	Type of Control Circuit		Cat. No.			
	AC		700-P000A1			
DC		700DC-P000Z24				

Photo	Description	Contents	Continuous Carrying Current [A]	Cat. No.
	Master Contact Cartridge	4 Master Cartridges (Cat. No. 700-CPM)	20	700-PMCKIT
	Heavy-duty Contact Kit	4 Master Cartridges and two sets of jumper terminals, rating label (makes two 35 A poles)	35	700-PHDKIT

Adder Decks—Use when you have four circuits or more than two 35 A circuits in the relay

	Device Description	Adder Decks Required Cat. No.	Additional Cartridge Kits Required
	8-Pole Device	700-PB00	1 additional kit
12-Pole Device	700-PB00 700-PC00 (Qty 1 of each)	2 additional kits	

EXAMPLE Heavy-Duty circuit (35 A) application that requires 4 circuits and 240 AC control circuit:

- Base Unit: Cat. No. 700-P000A1
- Cartridge Kits: Cat. No. 700-PHDKIT - Qty 2 (Each kit makes two circuits)
- Adder Deck: Cat. No. 700-PB00
- Coil: Cat. No. PA254

If required, see [Operating Coils](#) for coil selection.

Logic Reed and Overlapping Contact Cartridge Option

Follow this process to order a relay that utilizes: low energy contact cartridges or overlapping late make or late break cartridges

Base Blank Relay	+	Cartridge Kit	+	Adder Decks	+	Coil

(1) Coils for AC relays cannot be used in DC relays and vice versa.

(2) This coil is optimized for 115...120V, 60 Hz applications and operates satisfactorily at 110V, 50 Hz.

(3) This coil is optimized for 110...115V, 50 Hz applications and operates satisfactorily at 120V, 60 Hz.

Contact Cartridges (Convertible from N.O. to N.C. and N.C. to N.O.)

	Description	Continuous Carrying Current [A]	Arrangement	Pkg. Quantity	Cat. No.	
	Standard Contact Cartridge • AC Rating NEMA A600 • DC Rating NEMA P600	10	 or 	1	700-CP1	
	Overlap Contact Cartridges • Overlapping • Used in pairs. N.O. contact closes before N.C. contact opens on pick-up and vice versa on drop-out. ⁽¹⁾	AC Rating NEMA A600 DC Rating NEMA P150 125V DC, 138VA Make and Break	10 5	 or 	2	700-CP11Z
	Master Contact Cartridge • AC Rating Twice NEMA A600 • DC Rating NEMA N150 P600	20	 or 	1	700-CPM	
	Logic Reed Cartridge for Low-energy Circuits • 150V AC 500 mA 25VA max • 30V DC 200 mA • 6 W max ⁽²⁾	Maximum 150V AC	500 mA	 or 	1	700-CPR
		Maximum 30V DC	200 mA			

(1) Not Direct direct-drive.

(2) The 700-CPR Logic Reed cartridge must be installed only in the 2nd deck (B1X - B4X, B1Y - B4Y position) or 3rd deck (C1X - C4X, C1Y - C4Y position) of the Bulletin 700 Type P relay. It is not recommended that the 700-CPR cartridge be installed in the single deck (A1X - A4X, A1Y - A4Y position) because this may lead to improper operation.

700S-P and 700S-PK Heavy-duty Safety Control Relays

- Mechanically linked contacts meet IEC 947-5-1-L
- 2...12 poles – all mechanically linked
- Red cover for easy identification of safety circuits
- Tamper resistant cover helps prevent changes that could jeopardize safety
- IEC mechanically linked contacts symbol displayed on front
- Visual indication of contact state
- Ideal for use in safety circuits

⊗ AC Coil Voltage Code^(a)

The Cat. No. as listed is incomplete. Select a coil voltage code from the table below to complete the Cat. No. Example: Cat. No. 700S-P310 becomes Cat. No. 700S-P310A1 for a 120V AC coil.

Hz	24	115-120	230-240	460-480
60	A24	A1	A2	A4

IEC 947-5-1 Annex L has 2 requirements for a relay to meet for mechanically linked contacts:

- 1.) If a N.O. contact welds, all N.C. contacts remain open and meet a 2500V impulse test.
 - 2.) If a N.C. contact welds, all N.O. contacts remain open and meet a 2500V impulse test.
- 700S-P and 700S-DCP relays meet these requirements, including the 2500V impulse test.

The relays shown on this page are shipped from the factory with the 700-CPS safety cartridge installed and cannot be converted to N.O. or N.C. in the field.

(a) For other coil voltages, consult your local Rockwell Automation sales office or Allen-Bradley distributor.

The Cat. No. as listed is incomplete. Select a coil voltage code from the table below to complete the cat. no. Example: Cat. No. 700-N200⊗ becomes Cat. No. 700-N200A24 for 24V, 60 Hz. For other coil voltages, contact your local Rockwell Automation sales office or Allen-Bradley distributor.

Hz	24	110	120	208	220	240
50	—	A1	—	—	A2	—
60	A24	—	A1	A20	—	A2

IMPORTANT

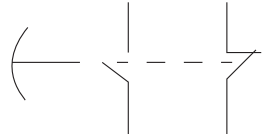

- **NORMALLY CLOSED CONTACTS:** Listed relays are supplied with all contacts normally open. These contacts can be readily converted to normally closed in the field.
- **OVERLAP CONTACTS:** Overlap contacts (normally open contact closes before the normally closed contact opens) can be supplied. See for information on kits for field installation of overlap contact cartridges.
- Location of contacts in 2-pole relays
- Permanent Magnet Latch AC Relay. Minimum Operating Time - Type NM - For reliable operation, power to the latch circuit must be maintained for a minimum time of 75 milliseconds and power to the unlatch circuit must be maintained for minimum time of 50 milliseconds.

Operating Mode

Replace the # in the cat. no. with the appropriate letter and numbers to indicate the operating mode and the fixed time delay value. See operating mode table below.

Digit	Operating Mode	Fixed Time Delay
S	On-Delay - s	Seconds -Two digits indicating the fixed time delay in seconds.
Z	Off-Delay - s	Three digits indicating the fixed time delay (first digit indicates seconds, next two digits indicate 1/100 seconds).
Y	On-Delay - min	Minutes -Two digits indicating the fixed time delay in minutes.
I	Off-Delay - min	Three digits indicating the fixed time delay (first digit indicates minutes, next two digits indicate 1/100 minutes).

EXAMPLE Cat. No. **700-RTC00Y200U1** is for a relay without contact cartridges. "Y20" indicates an On-Delay timer with a 20 minute fixed time delay. This is a "standard relay." Order the contact cartridges separately.
 Cat. No. **700-RTC42S020U1** is for a relay with 2 N.O. cartridges in the timed position and 1 N.C. cartridge in the instantaneous position. "S02" indicates an On-Delay timer with a 2 second fixed time delay.

⊗ Coil Voltage Code

The Cat. No. as listed is not complete. Select a voltage code from the table below to complete the Cat. No. Example: Cat. No. 700-RTC00100⊗ becomes Cat. No. 700-RTC00100U24. For other voltages consult your local Rockwell Automation sales office or Allen-Bradley distributor.

700-CF Control Relay

- IEC industrial relays
- Mechanically linked contact performance per IEC 60947-5-1
- Gold plated, bifurcated version for low level switching applications
- Master control relay version rated 15 A (AC-15)
- Solid-state and pneumatic timing modules
- 4...10 Poles

(1) For other operating conditions, contact your local Rockwell Automation sales office or Allen-Bradley distributor.

(2) With no side auxiliary contacts installed. Otherwise 3 N.C. Maximum.

Control Modules

Timers

	Description		Connection Diagrams	For Use With	Cat. No.					
	Pneumatic Timing Modules • Pneumatic timing element contacts switch after the delay time. The contacts on the main control relay continue to operate without delay	On-Delay	0.3...30 s		700-CF with AC coils ⁽¹⁾	100-FPTA30				
			2...180 s			100-FPTA180				
		Off-Delay	0.3...30 s		700-CF all	100-FPTB30				
			2...180 s			100-FPTB180				
	Electronic Timing Modules – On-delay • Delay of the contactor or control relay solenoid. The contactor or control relay is energized at the end of the delay time.		0.1...3 s		700-CF with 110...240V, 50/60Hz coils	100-ETA3				
			1...30 s			100-ETA30				
			10...180 s			100-ETA180				
					0.1...3 s		700-CF with 24V DC coils	100-ETAZJ3		
					1...30 s			100-ETAZJ30		
					10...180 s			100-ETAZJ180		
	Electronic Timing Modules – Off-delay • Delay of the contactor or control relay solenoid. After interruption of the control signal, the contactor or control relay is de-energized at the end of the delay time.		0.3...3 s		700-CF with 24V, 50/60Hz	100-ETBKJ3				
			1...30 s			100-ETBKJ30				
			10...180 s			100-ETBKJ180				
							0.3...3 s		700-CF with 110...240V 50/60Hz coils	100-ETB3
							1...30 s			100-ETB30
							10...180 s			100-ETB180
	Mechanical Latch • Following contactor latching, the contactor coil is immediately de-energized (off) by the N.C. auxiliary contact (65-66). • Electrical or manual release • 1 N.O. + 1 N.C. auxiliary contacts • Suitable for all Bul. 100-C contactor sizes, 9...97 A	Maximum command duration 0.03...10 s		700-CF with AC coils	100-FL11⊗					

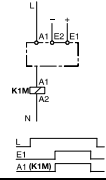

(1) Cannot be used with side-mounted auxiliary contacts on 700-CF DC relays.

⊗ **Coil Voltage Code:** The Cat. No. as listed is incomplete. Select a coil voltage code from the table below to complete the Cat. No. Example: 120V, 60 Hz: Cat. No. 100-FL11⊗ becomes Cat. No.100-FL11D

AC Voltages [V] ⁽¹⁾	24	48	100	110	120	230...240	240	277	380...400	400...415	440	480

700S-CF Safety Control Relays

The 700S-CF Safety Control Relay provides mechanically linked or mirror contact performance, which are required in feedback circuits for safety applications. Bifurcated contacts are ideal for low energy feedback safety circuits where high contact reliability is required.

- IEC industrial safety relay
- Mechanically linked contacts as per IEC 60947-5-1
- Third-party certification SUVA
- Red cover and mechanically linked contact symbol on front face
- Gold plated, bifurcated version for low level switching applications
- Permanently fixed front mounted auxiliary contact block

(1) For 16 or more strands, end ferrule is required

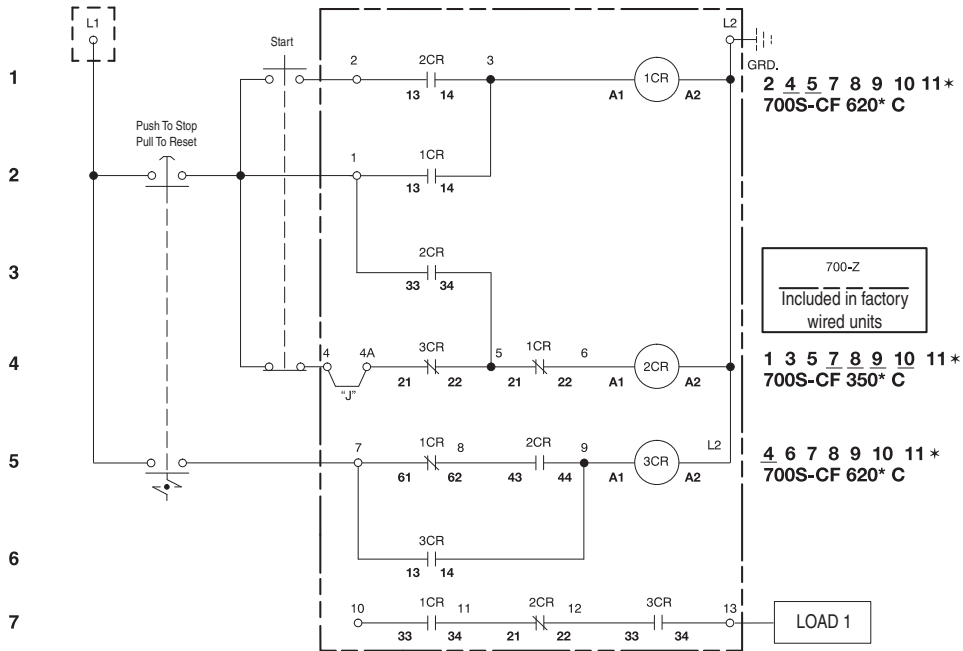

Safety Relay Circuit With 5 Safety Outputs

- Use for E-stop control. E-stop works properly if any one fault occurs (a fault could be one welded contact or one undesired open connection such as a loose wire).
- High output switching capability and long contact life.
- Circuit complies with EN 954 categories 1, 2, 3, 4.
- Helps prevent restart of the 5 safety outputs if there is a single fault anywhere in the system.
- Use three 700S-CF relays and [Figure 138](#) to construct the circuit.

Figure 138 - 700S-CF Circuit

Basic Circuit

(1) Output Circuit (3 Relays, 9 Terminal Blocks)

(5) Output Circuit (3 Relays, 17 Terminal Blocks)

* Numbers shown are the line numbers where the contacts for this relay appear. Contact your local Rockwell Automation sales office or Allen-Bradley distributor for availability.

Approximate Dimensions

Approximate dimensions are shown in millimeters (inches). Dimensions are not intended for manufacturing purposes.

700S-EF Safety Control Relays

The 700S-EF Safety Control Relay provides mechanically linked or mirror contact performance, which are required in feedback circuits for safety applications.

- IEC industrial safety relay
- Electronic coils
- Mechanically linked contacts as per IEC 60947-5-1
- Red cover and mechanically linked contact symbol on front face
- Permanently fixed front mounted auxiliary contact block

Product Selection

Safety Relay Circuit With 5 Safety Outputs

- Use for E-stop control. E-stop works properly if any one fault occurs (a fault could be one welded contact or one undesired open connection such as a loose wire).
- High output switching capability and long contact life.
- Circuit complies with EN 954 categories 1, 2, 3, 4.
- Helps prevent restart of the 5 safety outputs if there is a single fault anywhere in the system.
- Use three 700S-EF relays and [Figure 149](#) to construct the circuit.

Figure 149 - 700S-EF Circuit

(1) Pozidriv No. 2 / Blade No. 3 screw.

(2) Stranded wire only.

(3) Use same cross sections.

Table 153 - Coil Data

			700-K
Operating Limits			
50 Hz, 60 Hz, 50/60 Hz	pick-up	[x U _s]	0.85...1.1
	dropout	[x U _s]	0.2...0.75
DC (conventional)	pick-up	[x U _s]	0.8...1.1 0.7...1.25 ⁽¹⁾
	dropout	[x U _s]	0.1...0.75
Coil Consumption			
50 Hz, 60 Hz, 50/60 Hz	pick-up	[VA]	35
	hold-in	[VA/W]	5/1.8
DC (conventional)	pick-up	[W]	cold 3.0, warm 2.6
	hold-in	[W]	cold 3.0, warm 2.6
Operating Times			
AC	closing delay	[ms]	15...40
	opening delay	[ms]	15...33
With RC module	closing delay	[ms]	15...28
DC (conventional)	opening delay	[ms]	18...40
	closing delay	[ms]	6...12
With integrated diode	opening delay	[ms]	8...12
With external diode	opening delay	[ms]	35...50

(1) For 9, 12, 24, and 110V DC coils

Approximate Dimensions

Approximate dimensions are shown in millimeters. To convert millimeters to inches multiply by 0.0394. Dimensions are not intended to be used for manufacturing purposes.

Figure 153 - 700-K Control Relay and Mounting Position

Product Overview

				
Bulletin No.	700-SA		700-SC	
Type	Tube Base, Socketed		Miniature, Ice Cube Socketed	
Features	Compatible with 700-HN100, 125,108, and 204 socket, LED status, zero-cross switching		Compatible with 700-HN103 or 128 socket, LED Status, and Zero-cross AC Switching Options	
Load Type	AC (47...63 Hz)	DC	AC (47...63 Hz)	DC
Load Voltage Range	75...264V AC	3...125V DC	75...264V AC	3...52.8V DC or 3...125V DC
Load Current max (Continuous)	5 A	3 A	3 A	3 A @ 48V DC or 2 A @ 110V DC
Max Leakage Current to Load	5 mA @ 100V, 10 mA @ 200V	5 mA @ 125V	5 mA @ 100V AC	10 mA @ 200V AC, 5 mA @ 50V DC or 0.1 mA @ 100V DC
Zero Cross Load Switching	Yes	Not Applicable	Yes (optional)	Not Applicable
Equivalent Electromechanical Relay Contact Arrangement	Form A		Form A	
Rated Control (Input) Voltage	5...24V DC		5...24V DC, 100...110V AC, 200/220V AC	5...24V DC
LED Indicator	Yes		Yes (optional)	Yes (optional for 48V DC)
Mounting Method	Panel or DIN with socket		Panel or DIN with socket	
Dielectric Strength	1500V AC, 50/60 Hz, 1 min		1500V AC, 50/60 Hz, 1 min	
Certification	cURus, CE, VDE		cURus, CE, VDE	
Max Ambient Operating Temperature	-30...+80 °C (no condensation)		-30...+80 °C (no condensation)

(1) See [Table 154](#) for term definitions.

Table 154 - Solid-state Relay Glossary

Terms		Meaning
Insulation	Basic insulation	Insulation for basic protection from electric shock (IEC950 1.2.9.2)
	Supplemental insulation	Independent insulation that is provided outside of basic insulation to protect from electric shock when the basic insulation breaks down (IEC950 1.2.9.3)
	Reinforced insulation	A single-layer of insulation (IEC950 1.2.9.5) that provides the same protection from electric shock as double insulation, including both basic and supplemental insulation) according to conditions stipulated in IEC950 standards
Circuit functions	Zero cross circuit	A circuit that starts operation with the AC load voltage at close to zero-phase.
	Trigger circuit	A circuit for controlling the triac or thyristor trigger signal, which turns the load current ON and OFF.
Input	Isolated input circuit	If the external circuit is prone to generating noise, or if wires from external sources are prone to the influence of inductive noise, to help prevent malfunctions due to noise, it is necessary to electrically isolate internal circuits and external circuits (output circuits). An isolated input circuit is a circuit that isolates inputs and outputs by using components that are not connected electrically but that can transmit signals, such as contact relays or photocouplers.
	Photocoupler	A component that runs the electric signal into a light emitter (for example, LED), changes it to a light signal, and then returns it to an electric signal using a photoelectric conversion element, such as a photo transistor. The space that is used for transferring the light signal is isolated thus providing good insulation and a high propagation speed.
	Rated voltage	The voltage that serves as the standard value of an input signal voltage
	Pickup (must-operate) voltage	Minimum input voltage when the output status changes from OFF to ON.
	Input impedance	The impedance of the input circuit and the resistance of current-limiting resistors used. Impedance varies with the input signal voltage in case of the constant current input method.
	Operating voltage	The permissible voltage range within which the voltage of an input signal voltage may fluctuate.
	Dropout (Reset) voltage	Maximum input voltage when the output status changes from ON to OFF.
	Input current	The current value when the rated voltage is applied.
Output	Load voltage	This is the effective value for the power supply voltage that can be used for load switching or in the continuous-OFF state.
	Maximum load current (continuous)	The effective value of the maximum current that can continuously flow into the output terminals under specified cooling conditions (that is, the size, materials, thickness of the heatsink, and an ambient temperature radiating condition).
	Leakage current	The effective value of the current that can flow into the output terminals when a specified load voltage is applied to the SSR with the output turned OFF.
	Output ON voltage drop	The effective value of the AC voltage that appears across the output terminals when the maximum load current flows through the SSR under specified cooling conditions (such as the size, material, and thickness of heatsink, ambient temperature radiation conditions, etc.).
	Minimum load current (continuous)	The minimum load current at which the SSR can operate normally.
	Snubber circuit	A circuit consisting of a resistor R and capacitor C, which prevents faulty ignition from occurring in the SSR triac by suppressing a sudden rise in the voltage that is applied to the triac.
	Semiconductor output element (switching element)	This is a generic name for semiconductors such as the thyristor, triac, power transistor, and power MOS FET. In particular, triacs are often used in SSRs because they allow switching to be performed with one element.
	Repetitive peak OFF-state voltage (VDRM)	This is a rating for an output semiconductor that used in an SSR for AC loads.
	Collector-emitter voltage (VCEO)	This is a rating for an output semiconductor that used in an SSR for DC loads.
Characteristics	Operating (pick-up) time	A time lag between the moment a specified signal voltage is imposed to the input terminals and the output is turned ON.
	Release (drop-out) time	A time lag between the moment the imposed signal input is turned OFF and the output is turned OFF.
	Insulation resistance	The resistance between the input and output terminals or I/O terminals and metal housing (heatsink) when DC voltage is imposed.
	Dielectric strength	The effective AC voltage that the SSR can withstand when it is applied between the input terminals and output terminals or I/O terminals and metal housing (heatsink) for more than 1 minute.
	Ambient temperature and humidity (operating)	The ranges of temperature and humidity in which the SSR can operate normally under specified cooling, input/output voltage, and current conditions.
	Storage temperature	The temperature range in which the SSR can be stored without voltage imposition.
Others	Inrush current resistance	A current, which can be applied for short periods of time to the electrical element.
	Counter-electromotive force	Extremely steep voltage rise that occurs when the load switched or turned OFF.
	Recommended applicable load	The recommended load capacity that takes into account the safety factors of ambient temperature and inrush current.
	Bleeder resistance	The resistance connected in parallel to the load to increase apparently small load currents, so that the ON/OFF of minute currents functions normally. (It is also used to shunt leakage currents.)

Figure 154 - Solid-state Relay Switching Capacity

Relay Type	Equivalent EM Relay Contact Configuration	Load Voltage	Zero-Cross	Load Switching Device	Maximum AC and DC Switching Capability														
					1 mA	10 mA	50 mA	100 mA	1 A	3 A	5 A	10 A	20 A	25 A	30 A	35 A	100 A		
Solid-State	700-SA	Form A	AC	Yes	Triac					100 mA	1 A	3 A	5 A

			DC	N/A	Transistor					100 mA	1 A	2 A							

IMPORTANT * Requires a heatsink to reach maximum current value.

700-SA Tube Base Relays

- 5 A (resistive) max continuous load (output) current
- 264V AC or 125V DC max load voltage options
- Photocoupler isolation between control and load voltage
- LED indicator (standard) for input/logic ON/OFF status monitoring
- 700-HN100, -HN125, -HN 202, or -HN108 specialty socket compatible
- 700-HT2 timing module

Specifications

Table 155 - Control/Input Ratings

Cat. No.	Rated Control Voltage	Max Operating Control Voltage Range	Max Reverse Control Voltage	Impedance	Control Voltage Levels	
					Pick-up Voltage	Drop-out Voltage
700-SAZY5Z25	5...24V DC	4...32V DC	-32V DC	15 mA max ⁽¹⁾	4V DC max	1V DC min
700-SANY3Z25		4...30V DC	-30V DC	1.5 kΩ (+20% -10%)		

(1) With constant current input circuit system, SSR impedance varies with a change in input voltage.

Table 156 - Load/Output Ratings

Cat. No.	Rated Load Voltage	Maximum Load Voltage Range	Continuous Load Current (Resistive) [A]		Max Inrush Current ⁽¹⁾
			Min	Max ⁽²⁾	
700-SAZY5Z25	100...240V AC	75...264V AC	0.1	5.0	80 A, @ 50/60 Hz for 1 cycle
700-SANY3Z25	5...110V DC	3...125V DC	0.1	3.0	12 A (10 ms)

(1) If the SSR operation is continuous ON/OFF, this value should be reduced by 50%. See [Figure 156](#) for more details.

(2) Input impedance reaches its maximum at the operating voltage.

Table 157 - Characteristics

Description	Cat. No. 700-SAZY5Z25	Cat. No. 700-SANY3Z25
Load Switching Method/Device	Triac	Transistor
Pick-up Time	1/2 cycle of load power source cycle time ⁽¹⁾ + 1 ms max	0.5 ms max
Drop-out Time	1/2 cycle of load power source cycle time ⁽¹⁾ + 1 ms max	2.5 ms max
Output ON Voltage Drop	1.6V (RMS) max	1.5V max
Output Leakage Current	5 mA max (at 100V AC); 10 mA max (at 200V AC)	5 mA max (at 125V DC)
Output V_{DRM} V_{CEO} (V)	600	150
Output di/dt (V/uS)	50	—
Output dv/dt (V/uS)	500	—
Output I^2t (A ² S)	41.6	—
Output Tj (°C) max	125	150
Insulation Resistance	100 MΩ min (at 500V DC)	
Dielectric Strength	1500V AC, 50/60 Hz for 1 min	
Vibration Resistance (max)	10...55 Hz, 1.5 mm double amplitude (10 G)	
Shock Resistance (max)	1000 m/s ² (100 G)	
Ambient Temperature	Operating	-30...+80 °C (-22...+176 °F) with no icing or condensation
	Storage	-30...+100 °C (-22...+212 °F) with no icing or condensation
Ambient Humidity	45...85% (no condensation)	
Standards Compliance	UL 508, CSA C22.2 No. 14, EN 60947-1, -4-3	
Certifications	cURus Recognized (File No. E96956, Guide NMFT2/NMFT8), CE Marked, VDE Certified	
Weight	Approx. 70 g	

(1) 60 Hz full cycle time = 16.6 ms, 50 Hz full cycle time 20 ms.

Figure 155 - Cat. No. 700-SA Load Current vs. Ambient Temperature Characteristics

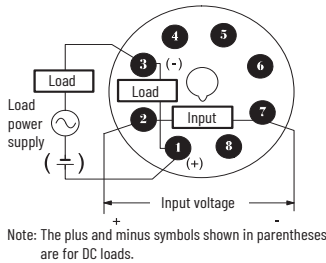

Figure 156 - Cat. No. 700-SA Inrush Current Resistivity

Inrush current resistivity is defined as the ability of an SSR to withstand a large surge current for a short period. Surges are considered non-repetitive (max repeatability once every 2...5 seconds).

Keep the inrush current to half the rated value if it occurs repetitively. Exceeding the non-repetitive inrush current damages the SSR.

Figure 157 - Terminal Arrangement (Bottom View)

Basic Application Considerations

High-Density Mounting of Multiple Solid-state Relays (SSRs)

If multiple SSRs are installed side by side, the outer case wall of the SSR serves to dissipate heat. Install the relays so that they are adequately ventilated. If poor ventilation is unavoidable, reduce the load current to half.

Protective Component

When controlling AC inductive loads, connect an inrush/surge absorbing device (varistor) across the SSR load terminals. If the SSR has built-in surge suppression (700-SE and 700-SH) and additional surge suppression is required, connect the varistor across the terminals of the load device. Select a varistor that meets the conditions of the load voltage that is outlined in [Table 158](#).

Table 158 - Relay Load and Varistor Voltage

Load Voltage	Varistor Voltage [V]	Varistor Surge Resistance
100...120V AC	240...270	1000 A min
200...240V AC	440...470	
380...480V AC	820...1000	

For additional details on solid-state relays, see the Solid-state Relay Application Guide, publication [700-ATO01](#).

Figure 158 - DC Inductive Load Wiring

For a DC inductive load, a diode should be connected parallel to the load to absorb the counter electromotive force (OFF) of the load.

Figure 159 - EMC Directive Compliance

1. AC-switching models comply with EMC Directives under the following conditions:

- Connect a varistor between the output terminals.
- Connect a film capacitor to the load power supply.
- The input cable must be less than 3 m.

2. DC-switching models comply with EMC Directives under the following conditions:

- The input cable must be less than 10 m.

Approximate Dimensions

All units in millimeters unless otherwise indicated. To convert millimeters to inches multiply by 0.0394. Dimensions are not intended to be used for manufacturing purposes.

Figure 160 - Cat. No. 700-SA Relays

700-SC Ice Cube Relays

- 3 A (resistive) max continuous load (output) current
- 264V AC, 48V DC or 125V DC max load voltage options
- 5...24V DC or 110/220V AC control (input) voltage options
- LED indicator (optional) for input/logic On/Off status monitoring
- 700-HN103, 700-HN104, or 700-HN128 socket compatible
- Compatible with 700-AT1 or 700-AT2 timer modules

Figure 161 - Load Current Versus Ambient Temperature Characteristics

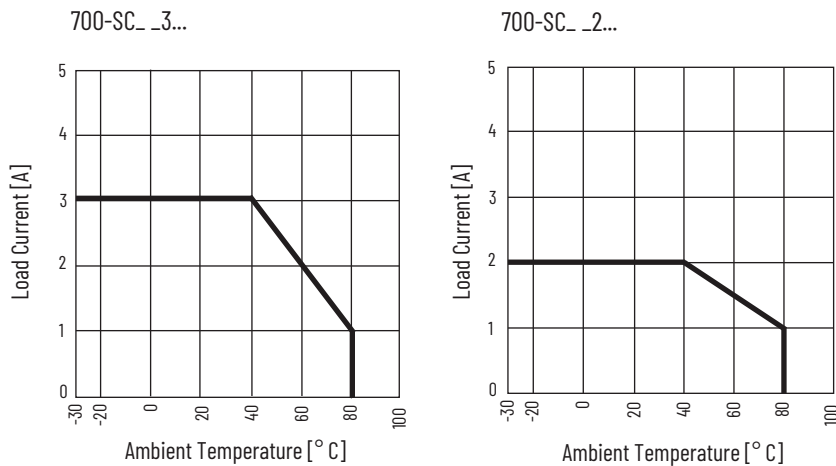

Figure 162 - Cat. No. 700-SC Inrush Current Resistivity

Inrush current resistivity is defined as the ability of an SSR to withstand a large surge current for a short period. Surges are considered non-repetitive (max repeatability once every 2...5 seconds).

Keep the inrush current to half the rated value if it occurs repetitively. Exceeding the non-repetitive inrush current damages the SSR.

Figure 163 - EMC Directive Compliance

1. AC-switching models comply with EMC Directives under the following conditions

- Connect a varistor between the output terminals.
- Connect a film capacitor to the load power supply.
- The input cable must be less than 3 m.

2. DC-switching models comply with EMC Directives under the following conditions

- The input cable must be less than 10 m.

Basic Application Considerations for 700-SC Relays

High-density Mounting of Multiple Solid-state Relays (SSRs)

If multiple relays are mounted side by side, the outer wall of each SSR works as a radiator. The SSR casing serves to dissipate heat. Install the relays so that they are adequately ventilated. If poor ventilation is unavoidable, reduce the load current by half.

Connection

For DC Load Switching, 700-SC operates properly if the load is connected to either the positive or negative SSR load terminal.

Protective Component

When controlling AC inductive loads, connect an inrush/surge absorbing device (varistor) across the SSR load terminals. If the SSR has built-in surge suppression (s 700-SE and 700-SH) and additional surge suppression is required, connect the varistor across the terminals of the load device. Select a varistor that meets the conditions of the load voltage that is outlined in [Table 162](#).

Table 162 - 700-SC Relay Load and Varistor Voltage

Load Voltage	Varistor Voltage [V]	Varistor Surge Resistance
100...120V AC	240...270	1000 A min
200...240V AC	440...470	
380...480V AC	820...1000	

For additional details on solid-state relays, see the Solid-State Relay Application Guide, publication [700-AT001](#).

Figure 164 - DC Inductive Load Wiring

For a DC inductive load, a diode should be connected parallel to the load to absorb the counter electromotive force (OFF) of the load.

Approximate Dimensions

All units in millimeters unless otherwise indicated. To convert millimeters to inches multiply by 0.0394. Dimensions are not intended to be used for manufacturing purposes.

Figure 165 - Cat. No. 700-SC Relay Dimensions and Terminal Arrangement

Note : The plus and minus symbols shown in parentheses are for DC loads.

700-SF Square Base Relays

- 3 A (resistive) max continuous load (output) current
- 264V AC or 52.8V DC max load voltage options
- 4...24V DC control/input voltage
- Photocoupler or phototriac isolation option between control and output voltage
- LED Indicator for input/logic ON/OFF status monitoring
- Cat. No. 700-HN116 socket compatible

(1) 60 Hz full cycle time = 16.6 ms, 50 Hz full cycle time 20 ms.

IMPORTANT This data is non-repetitive. Keep the inrush current to half the rated value if it occurs repetitively. Inrush current resistivity is the ability of an SSR to withstand a large surge current for a short period.

Figure 166 - Cat. No. 700-SF Load Current vs. Ambient Temperature Characteristics

Inrush current resistivity is defined as the ability of an SSR to withstand a large surge current for a short period. Surges are considered non-repetitive (max repeatability once every 2...5 seconds).

Keep the inrush current to half the rated value if it occurs repetitively. Exceeding the non-repetitive inrush current damages the SSR.

Figure 167 - Cat. No. 700-SFZ, -SFT Inrush Current Resistivity

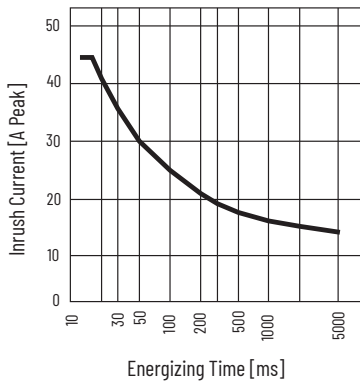

Figure 168 - Cat. No. 700-SFN Inrush Current Resistivity

Figure 169 - EMC Directive Compliance

1. AC-switching models comply with EMC Directives under the following conditions

- Connect a varistor between the output terminals.
- Connect a film capacitor to the load power supply.
- The input cable must be less than 3 m.

2. DC-switching models comply with EMC Directives under the following conditions

- The input cable must be less than 10 m.

Basic Application Considerations of 700-SF

High-density Mounting of Multiple Solid-state Relays (SSRs)

If multiple SSRs are mounted side by side, the outer case wall of the SSR acts as a radiator. The SSR case serves to dissipate heat. Install the relays so that they are adequately ventilated. If poor ventilation is unavoidable, reduce the load current by half.

Connection

For DC load switching, the Bul. 700-SF SSR operates properly if the load is connected to either the positive or negative load terminals.

Protective Component to Extend SSR Life

When controlling AC inductive loads, connect an inrush/surge absorbing device (varistor) across the SSR load terminals. If the SSR

has built-in surge suppression (700-SE and 700-SH) and additional surge suppression is required, connect the varistor across the terminals of the load device. Select a varistor that meets the conditions of the load voltage that is outlined in [Table 162](#).

Table 166 - 700-SF Relay Load and Varistor Voltage

Load Voltage	Varistor Voltage [V]	Varistor Surge Resistance
100...120V AC	240...270	1000 A min
200...240V AC	440...470	
380...480V AC	820...1000	

For additional details on solid-state relays, see the Solid-State Relay Application Guide, publication [700-AT001](#).

Figure 170 - DC Inductive Load Wiring

For a DC inductive load, a diode should be connected parallel to the load to absorb the counter electromotive force (OFF) of the load.

Approximate Dimensions

All units in millimeters unless otherwise indicated. To convert millimeters to inches multiply by 0.0394. Dimensions are not intended to be used for manufacturing purposes.

Load Connection

- For an AC load, use a power supply that is rated at 50 Hz. or 60 Hz. The maximum operating frequency is 10 Hz.
- The 700-SH has a built-in varistor for surge/inrush protection of AC loads. If additional suppression is required, connect an external varistor across the load device terminals. Select a varistor that meets the conditions of the load voltage that is outlined in [Table 172](#).

Table 172 - 700-SH Relay Load and Varistor Voltage

Load Voltage	Varistor Voltage [V]	Varistor Surge Resistance
100...120V AC	240...270	1000 A min
200...240V AC	440...470	
380...480V AC	820...1000	

For additional details on solid-state relays, see the Solid-state Relay Application Guide, publication [700-AT001](#).

Zero Cross Function

An SSR with a zero cross function operates when an AC load voltage reaches the zero point or its vicinity. This reduces clicking noises when the load is switched and minimizes the influence of an inductive load (such as, lamp, heater, or motor) on the power supply because the inrush current of the load is reduced. This can also minimize the scale of the inrush current protection circuit.

Figure 181 - Zero Cross Function

At a low applied voltage (for example, 24V AC) the load current is not fully supplied. When the unit is switched ON, the voltage required to power the unit deprives the output signal of the necessary voltage level and thus creates loss time. The lower the load voltage is, the greater the loss time is. This condition, however, does not create any serious problems.

Figure 182 - Zero Cross Loss Time

Figure 183 - DC Inductive Load Wiring

For a DC inductive load, a diode should be connected parallel to the load to absorb the counter electromotive force (OFF) of the load.

Approximate Dimensions

All units are in millimeters unless otherwise indicated. To convert to inches multiply by 0.0394. Dimensions are not intended for manufacturing purposes.

Figure 184 - Mounting Considerations

- The proper mounting orientation of the heatsink is so the heat fins run perpendicular to the floor (vertical) to maximize ventilation flow. If the fins do not run perpendicular to the floor, a 30% current derating is required.
- When attaching a heatsink to 700-SH, apply a thin layer of heat conductive grease (approximately 0.002 in. thick) on the heatsink to maximize heat transfer between the SSR and the heatsink.
 - Recommended types: Silicon based, Dow Corning 340, Toshiba YG6240; Non-silicon based, AOS company type 53300 (Cat. No. 46801-010-01).
- Tighten the SSR panel/heat sink mounting screws to a torque of 0.78...0.98 N•m (6.9...8.7 lb•in).
- Tighten the SSR terminal wiring screws as follows M4: 0.98...1.37 N•m (8.67...12.12 lb•in), M5: 1.57...2.35 N•m (13.89...20.8 lb•in).

700-SK Slim Line Relays

- High-response speed models
- Input sensor module to allow high voltage 100...240V AC or 12...24V DC sensor
- Interface to low voltage (logic) device such as a PC output module for typical SSR applications
- LED indicator
- Input modules and output modules can be used with the 700-HN121 or 700-HN221 sockets

Product Selection

Input/Sensor Module

Input-to-Output Isolation Method	Status Indicator	Response Frequency	Logic Level		Rated Input Sensor Voltage	Cat. No.

Table 175 - Characteristics

Description	Cat. No. 700-SKICA18	Cat. No. 700-SKICZ24
Pick-up time	20 ms max	0.1 ms max
Drop-out time	20 ms max	0.1 ms max
Response frequency	10 Hz	100 Hz
Output ON voltage drop	1.6V max	
Leakage current (from SSR)	5 μ A max	
Output V_{DRM} , V_{CEO} (V)	80 (ref. value)	80 (ref. value)
Output di/dt (A/uS)	–	–
Output dv/dt (V/uS)	–	–
Output I^2t (A ² S)	–	–
Output Tj (°C) max	150	150
Insulation Resistance	100 M Ω min between input and output	
Dielectric Strength	4000V AC, 50/60 Hz for 1 min between input and output	
Vibration Resistance (max)	10...55 Hz, 1.5 mm double amplitude (10 G)	
Shock Resistance (max)	1000 m/s ² (100 G)	
Ambient Temperature	Operating	-30...+80 °C (-22...+176 °F) with no icing or condensation
	Storage	-30...+100 °C (-22...+212 °F) with no icing or condensation
Standards Compliance	UL 508, CSA C22.2 No. 14, EN/IEC 60950	
Certifications	cURus Recognized (File No. E96956, Guide NMFT2/NMFT8), CE Marked, TÜV Certified	
Ambient Humidity	Operating	45...85% (no condensation)
Weight	Approx. 18 g

Ambient Humidity	Operating	45...85% (no condensation)		
Weight	Approx. 18 g			

(1) 60 Hz cycle time = 16.6 ms, 50 Hz cycle time = 20 ms.

Figure 192 - Load Current vs. Ambient Temperature Characteristics

Inrush current resistivity is defined as the ability of an SSR to withstand a large surge current for a short period. Surges are considered non-repetitive (max repeatability once every 2...5 seconds).

Keep the inrush current to half the rated value if it occurs repetitively. Exceeding the non-repetitive inrush current damages the SSR.

Figure 193 - Inrush Current Resistivity

Application Considerations of the 700-SK Relay

Connection

For DC load switching, 700-SK SSR operates properly if the load is connected to either the positive or negative SSR load terminal. The load can be connected to either positive or negative output terminals of the SSR.

Protective Element (to extend SSR life)

Because the SSR does not incorporate a surge absorption component, be sure to connect a surge absorption component when using the SSR to control an inductive load.

For additional details on solid-state relays, see the Solid-state Relay Application Guide, publication [700-AT001](#).

Approximate Dimensions

All units are in millimeters unless otherwise indicated. To convert to inches, multiply by 0.0394. Dimensions are not to be used for manufacturing purposes.

The input module (700-SKI) and output module (700-SKO) are compatible with the Cat. No. 700-HN121 socket.
