# Transition from MELSERVO-J2-Super/ J2M Series to J4 Series Handbook

---

Complete Support for Upgrading Your  
**MELSERVO-J2S/J2M to MELSERVO-J4**

# J2S

MITSUBISHI SERVO AMPLIFIERS & MOTORS

# MELSERVO

# J4

# ● SAFETY INSTRUCTIONS ●

Please read the instructions carefully before using the equipment.

To ensure correct usage of the equipment, make sure to read through this Replacement Manual, the Instruction Manual, the Installation Guide, and the Appended Documents carefully before attempting to install, operate, maintain, or inspect the equipment. Do not use the equipment until you have a full knowledge of the equipment, safety information and instructions.

In this Replacement Manual, the safety instruction levels are classified under "WARNING" and "CAUTION".

**WARNING**

Indicates that incorrect handling may cause hazardous conditions, resulting in death or severe injury.

**CAUTION**

Indicates that incorrect handling may cause hazardous conditions, resulting in medium or slight injury to personnel or may cause physical damage.

Note that the  CAUTION level may lead to a serious consequence according to conditions.

Please follow the instructions of both levels because they are important to personnel safety.

What must not be done and what must be done are indicated by the following diagrammatic symbols.

Indicates prohibition (what must not be done). For example, "No Fire" is indicated by .

Indicates obligation (what must be done). For example, grounding is indicated by .

In this Replacement Manual, instructions of a lower level than the above, such as those that do not cause physical damage or instructions for other functions, are classified under "POINT".

After reading this Instruction Manual, keep it accessible to the operator.

## 1. To prevent electric shock, note the following

### WARNING

- Before wiring or inspection, turn off the power and wait for 15 minutes or more (when 30 kW or more is used, 20 minutes or more) until the charge lamp turns off. Then, confirm that the voltage between P+ (P) and N- (N) (when 30 kW or more is used, L+ and L-) is safe with a voltage tester and others. Otherwise, an electric shock may occur. In addition, when confirming whether the charge lamp is off or not, always confirm it from the front of the servo amplifier.
- Ground the servo amplifier and servo motor securely.
- Any person who is involved in wiring and inspection should be fully competent to do the work.
- Do not attempt to wire the servo amplifier and servo motor until they have been installed. Doing so may cause an electric shock.
- Do not operate switches with wet hands. Otherwise, it may cause an electric shock.
- The cables should not be damaged, stressed, loaded, or pinched. Otherwise, it may cause an electric shock.
- During power-on or operation, do not open the front cover of the servo amplifier. Otherwise, it may cause an electric shock.
- Do not operate the servo amplifier with the front cover removed. High-voltage terminals and charging area are exposed and you may get an electric shock.
- Except for wiring and periodic inspection, do not remove the front cover of the servo amplifier even if the power is off. The servo amplifier is charged and you may get an electric shock.
- To prevent electric shock, always connect the protective earth (PE) terminal ( marked) of the servo amplifier to the protective earth (PE) of the cabinet.
- To avoid an electric shock, insulate the connections of the power supply terminals.

## 2. To prevent fire, note the following

### CAUTION

- Install the servo amplifier, servo motor, and regenerative resistor on incombustible material. Installing them directly or close to combustibles will lead to a fire.
- Be sure to connect a magnetic contactor between the power supply and the main circuit power supply (L1/L2/L3) of the servo amplifier, in order to configure a circuit that shuts off the power supply by the magnetic contactor. If the magnetic contactor is not connected, a continuous flow of a large current may cause smoke or a fire when the servo amplifier malfunctions.
- When using the regenerative resistor, switch power off with the alarm signal. Not doing so may cause smoke and fire when a regenerative transistor malfunctions or the like may overheat the regenerative resistor.
- Provide adequate protection to prevent screws and other conductive matter, oil and other combustible matter from entering the servo amplifier and servo motor.
- Always connect one no-fuse breaker or one fuse for each servo amplifier between the power supply and the main circuit power supply (L1/L2/L3) of the servo amplifier (including the converter unit) in order to configure a power supply shut-off on the side of the servo amplifier's power supply. If a no-fuse breaker or fuse is not connected, continuous flow of a large current may cause smoke and fire when the servo amplifier malfunctions.

### 3. Injury prevention

## CAUTION

- Only the voltage specified in the Instruction Manual should be applied to each terminal. Otherwise, a burst, damage, etc. may occur.
- The cables must be connected to the correct terminals. Otherwise, a burst, damage, etc. may occur.
- Ensure that the polarity (+/-) is correct. Otherwise, a burst, damage, etc. may occur.
- The servo amplifier heat sink, regenerative resistor, servo motor, etc. may be hot while power is on or for some time after power-off. Take safety measures, e.g. provide covers, to avoid accidentally touching the parts (cables, etc.) by hand.
- During operation, never touch the rotor of the servo motor. Otherwise, it may cause injury.

### 4. Additional instructions

The following instructions should also be fully noted. Incorrect handling may cause a malfunction, injury, electric shock, fire, etc.

#### (1) Transportation/installation

## CAUTION

- Transport the products correctly according to their mass.
- Stacking in excess of the specified number of product packages is not allowed.
- Do not hold the front cover when transporting the servo amplifier. Otherwise, it may drop.
- Install the servo amplifier and the servo motor in a load-bearing place in accordance with the Instruction Manual.
- Do not get on or put heavy load on the equipment.
- The equipment must be installed in the specified direction.
- Secure the prescribed distance between the servo amplifier and the inner surface of the cabinet or other devices.
- Do not install or operate the servo amplifier and servo motor which have been damaged or have any parts missing.
- Do not block the intake and exhaust areas of the servo amplifier. Otherwise, it may cause a malfunction.
- Do not drop or strike the servo amplifier and servo motor. Isolate them from all impact loads.
- When you keep or use the equipment, please fulfill the following environment.

Item		Environment
Ambient temperature	Operation	0 °C to 55 °C (non-freezing)
	Storage	-20 °C to 65 °C (non-freezing)
Ambient humidity	Operation	90 %RH or less (non-condensing)
	Storage	
Ambience		Indoors (no direct sunlight) and free from corrosive gas, flammable gas, oil mist, dust, and dirt
Altitude		1000 m or less above sea level
Vibration resistance		5.9 m/s <sup>2</sup> or less at 10 to 55 Hz (directions of X, Y, Z axes)

- Contact your local sales if the product has been stored for an extended period of time.
- When handling the servo amplifier, be careful about the edged parts such as corners of the servo amplifier.
- The servo amplifier must be installed in a metal cabinet.
- When fumigants that contain halogen materials, such as fluorine, chlorine, bromine, and iodine, are used for disinfecting and protecting wooden packaging from insects, they cause a malfunction when entering our products. Please take necessary precautions to ensure that remaining materials from fumigant do not enter our products, or treat packaging with methods other than fumigation, such as heat treatment. Additionally, disinfect and protect wood from insects before packing the products.

## (2) Wiring

### ⚠ CAUTION

- Wire the equipment correctly and securely. Otherwise, the servo motor may operate unexpectedly.
- Do not install a power capacitor, surge killer, or radio noise filter (optional FR-BIF) on the output side of the servo amplifier.
- Because installation of these items may cause the servo motor to malfunction, connect the wires to the correct phase terminals (U/V/W) of the servo amplifier and servo motor power supply.
- Directly connect the servo amplifier power output (U/V/W) to the servo motor power input (U/V/W). Do not let a magnetic contactor, etc. intervene. Otherwise, it may cause a malfunction.

- The connection diagrams in this Instruction Manual are shown for sink interfaces, unless stated otherwise.
- The surge absorbing diode installed to the DC relay for control output should be fitted in the specified direction. Otherwise, the emergency stop and other protective circuits may not operate.

- When the cable is not tightened enough to the terminal block, the cable or terminal block may generate heat because of the poor contact. Be sure to tighten the cable with specified torque.
- To avoid a malfunction, do not connect the U, V, W, and CN2 phase terminals of the servo amplifier to the servo motor of an incorrect axis.
- Configure a circuit to turn off EM2 or EM1 when the main circuit power is turned off to prevent an unexpected restart of the servo amplifier.

## (3) Trial run/adjustment

### ⚠ CAUTION

- Before operation, check the parameter settings. Improper settings may cause some machines to operate unexpectedly.
- Never perform extreme adjustment or changes to the parameters; otherwise, the operation may become unstable.
- Keep away from moving parts in a servo-on state.

#### (4) Usage

### ⚠ CAUTION

- Provide an external emergency stop circuit to ensure that operation can be stopped and power switched off immediately.
- Do not disassemble, repair, or modify the equipment.

### ⚠ CAUTION

- Before resetting an alarm, make sure that the run signal of the servo amplifier is off in order to prevent a sudden restart. Otherwise, it may cause an accident.
- The effect of electromagnetic interference must be reduced by using a noise filter or by other means. Electromagnetic interference may be given to the electronic equipment used near the servo amplifier.
- Burning or disassembling a servo amplifier may generate toxic gases. Do not burn or break it.
- Use the servo amplifier with the specified servo motor.
- The electromagnetic brake on the servo motor is designed to hold the motor shaft and should not be used for ordinary braking.
- For such reasons as service life and mechanical structure (e.g. where a ball screw and the servo motor are coupled via a timing belt), the electromagnetic brake may not hold the motor shaft. To ensure safety, install a stopper on the machine side.

#### (5) Corrective actions

### ⚠ CAUTION

- Ensure safety by confirming the power off, etc. before performing corrective actions. Otherwise, it may cause an accident.
- When it is assumed that a hazardous condition may occur due to a power failure or product malfunction, use a servo motor with an electromagnetic brake or external brake to prevent the condition.
- Configure an electromagnetic brake circuit so that it is activated by an external EMG stop switch.

Contacts must be opened with the ALM (malfunction) off or the MBR (electromagnetic brake interlock) off.

Contacts must be opened with the EMG stop switch.

- When any alarm has occurred, eliminate its cause, ensure safety, and deactivate the alarm before restarting operation.
- Provide an adequate protection to prevent unexpected restart after an instantaneous power failure.

## (6) Maintenance, inspection and parts replacement

### CAUTION

- Make sure that the emergency stop circuit operates properly such that an operation can be stopped immediately and a power is shut off by the emergency stop switch.
- It is recommended that the servo amplifier be replaced every 10 years when it is used in general environment.
- When using a servo amplifier whose power has not been turned on for a long time, contact your local sales office.

## (7) General precautions

- To illustrate details, the equipment in the diagrams of this Replacement Manual may have been drawn without covers and safety guards. When the equipment is operated, the covers and safety guards must be installed as specified. Operation must be performed in accordance with Instruction Manual.

## ● Disposal of Waste ●

When disposing of this product, the following two laws are applicable, and it is necessary to consider each law. In addition, because the following laws are effective only in Japan, local laws have priority outside Japan (overseas). We ask that the local laws be displayed on the final products or that a notice be issued as necessary.

### 1. Requirements of the Act on the Promotion of Effective Utilization of Resources (Commonly known as: the Law for Promotion of Effective Utilization of Resources Promotion Law)

- (1) Please recycle this product whenever possible when it becomes unnecessary.
- (2) It is recommended that this product be divided as necessary and sold to appropriate purchasers, as recycled resources are usually divided into iron, electrical parts, and so on, which are then sold to scrap processors.

### 2. Requirements of the Act on Waste Disposal & Cleaning (Commonly known as: The Waste Disposal Treatment Cleaning Act)

- (1) It is recommended to decrease waste through the sale of recyclables or through any other means as shown in the preceding Paragraph 1.
- (2) In case the unnecessary products cannot be sold and require disposal, such item falls under Industrial waste in the above act.
- (3) It is required that industrial waste be properly dealt with, including manifest management, by commissioning the disposal to an industrial waste disposal contractor licensed under the act.
- (4) Please dispose of batteries (primary batteries) used in servo amplifiers according to local regulations.

### Measures against servo amplifier harmonics

This servo amplifier applies to "Harmonics control guidelines for customers receiving high voltage or special high voltage power" (published by current Ministry of Economy, Trade and Industry). Consumers subject to this guideline must check if a harmonic suppression measure is necessary, and measures must be enforced when the limit level is exceeded.

### EEP-ROM life

The number of write times to the EEP-ROM, which stores parameter settings, etc., is limited to 100,000. If the total number of the following operations exceeds 100,000, the servo amplifier may malfunction when the EEP-ROM reaches the end of its useful life.

- Write to the EEP-ROM due to parameter setting changes
- Write to the EEP-ROM due to device changes
- Home position setting condition in the absolute position detection system

### STO function of the servo amplifier

Refer to the applicable "Servo Amplifier Instruction Manual" when using the STO function of the servo amplifier.

## Dealing with overseas standards

Refer to the following relevant manuals concerning dealing with overseas standards.

### «About the manual»

This Replacement Manual and the following Instruction Manuals are necessary when using this servo for the first time. Ensure to prepare them to use the servo safely.

#### Relevant manuals

Manual name	Manual number
MELSERVO-J4 Series Instructions and Cautions for Safe Use of AC Servos (Packed with the servo amplifier)	IB(NA)0300175
MELSERVO-J4 Servo Amplifier Instruction Manual (Troubleshooting Edition)	SH(NA)030108
MELSERVO Servo Motor Instruction Manual (Vol. 3) (Note 1)	SH(NA)030099
MELSERVO Linear Servo Motor Instruction Manual (Note 2)	SH(NA)030095
MELSERVO Direct Drive Motor Instruction Manual (Note 3)	SH(NA)030097
MELSERVO Linear Encoder Instruction Manual (Note 2, 4)	SH(NA)030096
EMC Installation Guidelines	IB(NA)67303

- Note
1. It is necessary for using a rotary servo motor.
  2. It is necessary for using a linear servo motor.
  3. It is necessary for using a direct drive motor.
  4. It is necessary for using a fully closed loop system.

### «Cables used for wiring»

The wiring cables mentioned in this Replacement Manual are selected based on an ambient temperature of 40 °C.

### «U.S. customary units»

U.S. customary units are not shown in this manual. Convert the values if necessary according to the following table.

Quantity	SI (metric) unit	U.S. customary unit
Mass	1 [kg]	2.2046 [lb]
Length	1 [mm]	0.03937 [inch]
Torque	1 [N·m]	141.6 [oz·inch]
Moment of inertia	1 [(× 10 <sup>-4</sup> kg·m <sup>2</sup> )]	5.4675 [oz·inch <sup>2</sup> ]
Load (thrust load/axial load)	1 [N]	0.2248 [lbf]
Temperature	N [°C] × 9/5 + 32	N [°F]

### «Display»

The following abbreviations are used for the model names of the servo amplifiers in this Replacement Manual.

[J2S-A]: MR-J2S- \_A\_

[J2S-B]: MR-J2S- \_B\_

[J2S-CP]: MR-J2S- \_CP\_

[J2S-CL]: MR-J2S- \_CL\_

[J2M-A]: MR-J2M- \_A\_

[J2M-B]: MR-J2M- \_B\_

[J4-A]: MR-J4- \_A\_

[J4-B]: MR-J4- \_B\_

Parameter No. \_ \_ : [Pr. \_ \_ ]

## CONTENTS

<b>Part 1: Summary of MR-J2S/MR-J2M Replacement</b>	<b>1-1 to 1-14</b>
-----------------------------------------------------	--------------------

1. SUMMARY OF MR-J2S/MR-J2M REPLACEMENT.....	1-2
2. MAJOR REPLACEMENT TARGET MODEL.....	1-2
2.1 Servo Amplifier Replacement Target Model.....	1-2
2.2 Servo Motor Replacement Target Model.....	1-2
3. FLOW OF REPLACEMENT .....	1-3
3.1 Summary.....	1-3
3.2 Flow of Review on Replacement .....	1-3
3.3 Review on Replacement.....	1-7
3.3.1 Checking the system prior to replacement .....	1-7
3.3.2 Determination of base replacement model.....	1-8
3.3.3 Mounting compatibility check.....	1-12
3.3.4 Detailed review on replacement model .....	1-12
3.3.5 Peripheral equipment check .....	1-12
3.3.6 Startup procedure check.....	1-12
4. RELATED MATERIALS.....	1-12
4.1 Catalog.....	1-12
4.2 Instruction Manual .....	1-12
4.3 Replacement Manual.....	1-13

3.6.1 Setting requisite parameters upon replacement.....	4-15
3.6.2 Parameter comparison list .....	4-17
3.6.3 Comparison of parameter details.....	4-20
3.7 Comparison of Communication Commands.....	4-40

<b>Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU_</b>	<b>5-1 to 5-58</b>
-----------------------------------------------------------------------------------------------	--------------------

1. FUNCTIONS AND CONFIGURATION .....	5-2
1.1 Differences Between MR-J2S-30 kW or Higher Capacity Models and MR-J4-DU_ .....	5-2
1.2 Combination of Converter Unit, Drive Unit, and Servo Motor.....	5-3
1.3 Configuration with Peripheral Equipment .....	5-4
1.4 Installation.....	5-6
1.5 Magnetic Contactor Control Connector (CNP1) [Exclusively for MR-J4-DU_].....	5-8
2. SIGNALS AND WIRING .....	5-10
2.1 Comparison of Standard Connection Diagrams .....	5-10
2.2 Power-on Sequence .....	5-15
2.3 List of Corresponding Connectors and Terminal Blocks .....	5-20
3. PARAMETERS .....	5-25
3.1 Comparison of Parameters.....	5-25
4. CHARACTERISTICS .....	5-30
4.1 Capacity of Power Source Facility and Generation Loss .....	5-30
4.2 Inrush Current When Turning On the Main Circuit/Control Circuit Power Supply.....	5-31
5. OPTIONS AND PERIPHERAL EQUIPMENT.....	5-32
5.1 Comparison Table of Cable Option Combinations .....	5-32
5.1.1 MR-J3CDL05M (0.5 m) Protection Coordination Cable .....	5-32
5.2 Wire Selection Example.....	5-33
5.2.1 MR-J2S-series power supply wire size.....	5-34
5.2.2 MR-J4-series, power supply wire size .....	5-35

5.3 Selection of No-Fuse Breakers, Fuses, and Magnetic Contactors (example) .....	5-37
5.3.1 MR-J2S-series, no-fuse breakers and magnetic contactors (recommended).....	5-37
5.3.2 MR-J4-series, no-fuse breakers, fuses, and magnetic contactors (recommended).....	5-37
5.4 FR-BU2-(H) Brake Unit.....	5-39
5.4.1 Selection .....	5-39
5.4.2 Parameter setting of brake units.....	5-40
5.4.3 Connection example .....	5-40
5.4.4 Dimensions .....	5-56
5.5 Comparison of Peripheral Equipment.....	5-57

Part 6: Review on Replacement of MR-J2M with MR-J4	6-1 to 6-20
----------------------------------------------------	-------------

1. SUMMARY.....	6-2
2. CASE STUDY ON REPLACEMENT OF MR-J2M.....	6-2
2.1 Replacement Method.....	6-2
2.2 Equipment Configuration .....	6-2
3. DIFFERENCES BETWEEN MR-J2M-A AND MR-J4-_A_ .....	6-3
3.1 Function Comparison Table.....	6-3
3.1.1 General .....	6-3
3.2 Comparison of Standard Connection Diagrams.....	6-4
3.3 List of Corresponding Connectors and Terminal Blocks .....	6-5
3.4 Comparison of Peripheral Equipment.....	6-8
3.5 Comparison of Parameters.....	6-8
3.5.1 Parameter comparison list.....	6-8
4. DIFFERENCES BETWEEN MR-J2M-B AND MR-J4-_B_ .....	6-11
4.1 Review on Replacement Method.....	6-11
4.2 Replacement Method.....	6-12
4.3 Function Comparison Table.....	6-13
4.4 Comparison of Standard Connection Diagrams.....	6-14
4.5 List of Corresponding Connectors and Terminal Blocks .....	6-15
4.6 Comparison of Peripheral Equipment.....	6-16
4.7 Comparison of Parameters.....	6-17
4.7.1 Parameter comparison list.....	6-17

Part 7: Common Reference Material	7-1 to 7-102
-----------------------------------	--------------

1. SPECIFICATION DIFFERENCES.....	7-2
1.1 Detailed Specification/Function Differences.....	7-2
1.2 Servo amplifier .....	7-6
1.2.1 Main circuit terminal block .....	7-6
1.2.2 Comparison of encoder signals (CN2).....	7-9
1.2.3 Dynamic brake: coasting distance .....	7-10
1.2.4 Forced stop deceleration function selection .....	7-16
1.2.5 24 V DC power supply for interface: built-in ⇒ outside supply requisite .....	7-17
1.2.6 Servo setup software: Setup software (SETUP161E) ⇒ MR Configurator2 .....	7-18
1.2.7 Communication I / F: RS-232C ⇒ USB .....	7-18
1.2.8 Servo amplifier initializing time .....	7-19
1.2.9 The pulse width of the encoder Z-Phase pulse .....	7-21
2. SERVO AMPLIFIER DIMENSIONS/ATTACHMENT DIFFERENCES.....	7-22
2.1 MR-J2S ⇒ MR-J4 Comparison Table of Servo Amplifier Dimensions/ Installation Differences .....	7-22
2.1.1 General-purpose interface/SSCNET interface 200 V class (22 kW or less) .....	7-22

2.1.2	General-purpose interface/SSCNET interface 100 V class (0.4 kW or less)	7-22
2.1.3	Built-in positioning function/program supported 200 V class (7 kW or less)	7-23
2.1.4	Built-in positioning function/program supported 100 V class (0.4 kW or less)	7-23
2.1.5	General-purpose interface drive unit/SSCNET interface drive unit 200 V class (30 kW or more)	7-27
2.1.6	General-purpose interface/SSCNET interface 400 V class (22 kW or less)	7-29
2.1.7	General-purpose interface drive unit/SSCNET interface drive unit 400 V class (30 kW or more)	7-32
2.2	MR-J2M- <sub> </sub> ⇒ MR-J4- <sub> </sub> Comparison Table of Servo Amplifier Dimensions/ Installation Differences	7-35
2.3	MR-J2S- <sub> </sub> A <sub> </sub> /MR-J2S- <sub> </sub> CP <sub> </sub> /MR-J2S- <sub> </sub> CL <sub> </sub> Parameter Diversion Procedure	7-39
2.3.1	Operation procedure of parameter conversion	7-39
2.3.2	MR-J2S- <sub> </sub> A <sub> </sub> /MR-J2S- <sub> </sub> CP <sub> </sub> /MR-J2S- <sub> </sub> CL <sub> </sub> parameter diversion procedure	7-40
2.3.3	Parameter reading from the servo amplifier MR-J2S- <sub> </sub> A <sub> </sub> /MR-J2S- <sub> </sub> CP <sub> </sub> /MR-J2S- <sub> </sub> CL <sub> </sub>	7-41
2.3.4	Converting the parameters of MR-J2S- <sub> </sub> A <sub> </sub> /MR-J2S- <sub> </sub> CP <sub> </sub> /MR-J2S- <sub> </sub> CL <sub> </sub> and writing them to the MR-J4- <sub> </sub> A <sub> </sub> (-RJ) servo amplifier	7-43
2.3.5	Conversion rules	7-47
2.4	MR-J2S- <sub> </sub> B <sub> </sub> Parameter Diversion Procedure	7-82
2.4.1	Changing QD75M to QD77MS/LD77MS	7-83
2.4.2	Changing the motion controller A series/Q17nCPU to Q17nDSCPU/Q170MSCPU(-S1)	7-86
2.4.3	Conversion rules (MR-J2S- <sub> </sub> B <sub> </sub> => MR-J4- <sub> </sub> B <sub> </sub> )	7-88
3.	COMMON POINTS TO NOTE	7-94
3.1	Points to Note When Replacing a Battery	7-94
3.1.1	Servo amplifier battery mounting method	7-95
3.1.2	Disassembly method	7-96
3.1.3	Replacement procedure of MR-BAT6V1SET built-in battery	7-96
4.	HC- <sub> </sub> FS /HA- <sub> </sub> FS MOTOR DRIVE	7-97
4.1	Parameter setting	7-97
4.2	Corresponding Software Version	7-98
4.2.1	Method for checking the software version	7-101
4.3	Overload protection characteristics (Important Points for Combining the drive unit MR-J4-DU55K <sub> </sub> 4 and HA-LFS motor)	7-102

<b>Part 8: Review on Replacement of Motor</b>	<b>8-1 to 8-68</b>
-----------------------------------------------	--------------------

1.	SERVO MOTOR REPLACEMENT	8-2
1.1	Servo Motor Substitute Model and Compatibility	8-2
2.	COMPARISON OF SERVO MOTOR SPECIFICATIONS	8-12
2.1	Comparison of Servo Motor Mounting Dimensions	8-12
2.2	Detailed Comparison of Servo Motor Mounting Dimensions	8-16
2.3	Comparison of Mounting Dimensions for Geared Servo Motors	8-18
2.4	Comparison of Geared Servo Motors	8-24
2.4.1	Comparison of actual reduction ratios for geared servo motors	8-24
2.4.2	Comparison of reducer efficiency of geared servo motors	8-24
2.5	Comparison of Moment of Inertia	8-25
2.6	Comparison of Servo Motor Connector Specifications	8-36
2.7	Comparison of Servo Motor Torque Characteristics	8-53

<b>Part 9: Review on Replacement of Optional Peripheral Equipment</b>	<b>9-1 to 9-52</b>
-----------------------------------------------------------------------	--------------------

1.	COMPARISON TABLE OF REGENERATIVE OPTION COMBINATIONS	9-2
1.1	Regenerative Options (200 V/100 V)	9-3

1.1.1	Combination and regenerative power for the MR-J2S series.....	9-3
1.1.2	Combination and regenerative power for the MR-J2M series .....	9-3
1.1.3	Combination and regenerative power for MR-J4 series (replacement model).....	9-4
1.2	External Form Comparison.....	9-5
1.3	Regenerative Options (400 V class).....	9-6
1.3.1	Combination and regenerative power for the MR-J2S series.....	9-6
1.3.2	Combination and regenerative power for MR-J4 series (replacement model).....	9-7
1.4	External Form Comparison.....	9-8
2.	COMPARISON TABLE OF DYNAMIC BRAKE OPTION COMBINATIONS.....	9-10
2.1	External Form Comparison.....	9-11
3.	COMPARISON TABLE OF CABLE OPTION COMBINATIONS .....	9-12
4.	POWER SUPPLY WIRE SIZE.....	9-13
4.1	Selection of Power Supply Wire Size (Example).....	9-13
4.1.1	MR-J2S-series power supply wire size.....	9-13
4.1.2	MR-J4-series power supply wire size .....	9-15
4.2	Selection Example of Crimp Terminals .....	9-18
4.2.1	MR-J2S-series crimp terminal .....	9-18
4.2.2	MR-J4-series crimp terminal.....	9-19
4.3	Selection of Molded-Case Circuit Breaker, Fuse, and Magnetic Contactor (Example).....	9-20
4.3.1	MR-J2S series, molded-case circuit breakers, fuses, and magnetic contactors .....	9-20
4.3.2	MR-J4 series, molded-case circuit breakers, fuses, and magnetic contactors (recommended) .....	9-21
5.	BATTERY .....	9-23
5.1	MR-J2S-Series Battery .....	9-23
5.1.1	Battery replacement procedure .....	9-23
5.2	MR-J2M-Series Battery Unit.....	9-23
5.3	MR-J4-Series Battery .....	9-24
5.3.1	Battery replacement procedure .....	9-24
5.3.2	When using the MR-BAT6V1SET battery .....	9-25
5.3.3	When using MR-BAT6V1BJ battery for junction battery cable.....	9-26
5.3.4	When using MR-BT6VCASE battery case .....	9-27
6.	EMC FILTER.....	9-28
6.1	MR-J2S-Series EMC Filter (200 V/100 V class).....	9-28
6.1.1	Dimensions .....	9-28
6.2	MR-J2S-Series EMC Filter (400 V class) .....	9-30
6.2.1	Dimensions .....	9-30
6.3	MR-J4-Series EMC Filter (Recommended) (200 V class).....	9-32
6.3.1	Connection example .....	9-32
6.3.2	Dimensions .....	9-33
6.4	MR-J4-Series EMC Filter (Recommended) (400 V class).....	9-35
6.4.1	Combination with the servo amplifier.....	9-35
6.4.2	Connection example .....	9-35
6.4.3	Dimensions .....	9-35
7.	POWER FACTOR IMPROVING AC REACTOR/POWER FACTOR IMPROVING DC REACTOR... ..	9-37
7.1	MR-J2S-Series Power Factor Improving AC Reactor (200 V/100 V class).....	9-37
7.2	MR-J2S-Series Power Factor Improving DC Reactor (200 V class).....	9-38
7.3	MR-J2S-Series Power Factor Improving AC Reactor (400 V class) .....	9-39
7.4	MR-J2S-Series Power Factor Improving DC Reactor (400 V class).....	9-40
7.5	MR-J4-Series Power Factor Improving DC Reactor (200 V class) .....	9-41
7.6	MR-J4-Series Power Factor Improving AC Reactor (200 V/100 V class).....	9-43
7.7	MR-J4-Series Power Factor Improving DC Reactor (400 V class) .....	9-45

7.8 MR-J4-Series Power Factor Improving AC Reactor (400 V class).....	9-47
8. SETUP SOFTWARE .....	9-49
8.1 MR-J2S Series Setup Software.....	9-49
8.1.1 Specifications.....	9-49
8.2 MR-J4-Series MR Configurator2 .....	9-49
8.2.1 Specifications.....	9-49
8.3 System Requirements .....	9-50
8.3.1 Components.....	9-50
8.3.2 Connection with servo amplifier.....	9-51
8.3.3 Points to note for use of the USB communication function .....	9-51

<b>Part 10: Startup Procedure Manual</b>	<b>10-1 to 10-2</b>

**Part 1**  
**Summary of MR-J2S/**  
**MR-J2M Replacement**

# Part 1: Summary of MR-J2S/MR-J2M Replacement

This document describes the review items for replacing MR-J2S with MR-J4 and MR-J2M with MR-J4. Some equipment may require review on items not described in this document. Please review those items after viewing the Instruction Manual and the catalogs.

## Part 1: Summary of MR-J2S/MR-J2M Replacement

### 1. SUMMARY OF MR-J2S/MR-J2M REPLACEMENT

In this document, the flow when replacing a system using the MELSERVO "MR-J2S/MR-J2M series" with the "MRJ4 series" is explained.

After deciding the replacement strategy (simultaneous replacement, partial replacement of servo amplifier/servo motor/controller), please proceed with replacement by referring to the corresponding parts of this manual and the manual for each model.

### 2. MAJOR REPLACEMENT TARGET MODEL

#### 2.1 Servo Amplifier Replacement Target Model

Series	Servo amplifier model
MR-J2S Series	MR-J2S- _A_
	MR-J2S- _B_
	MR-J2S- _CP_
	MR-J2S- _CL_
MR-J2M Series	MR-J2M-P8A+
	MR-J2M- _DU
	MR-J2M-P8B+
MR-J2M- _DU	

→

Series	Servo amplifier model
MR-J4 Series	MR-J4- _A_
	MR-J4- _B_
	MR-J4- _A_ -RJ
	MR-J4- _A_
	MR-J4- _B_

#### 2.2 Servo Motor Replacement Target Model

		Series	Servo motor model	
Small capacity	Low inertia	HC- _FS Series	HC-KFS_	
	Ultra-low inertia		HC-MFS_	
	Flat		HC-UFS_	
Medium capacity	medium inertia		HC-SFS_	
	Low inertia		HC-LFS_	
	Ultra-low inertia		HC-RFS_	
	Flat		HC-UFS_	
Large capacity	Low inertia		HA- _FS Series	HA-LFS_

→

Series	Servo motor model
HG Series	HG-KR_
	HG-MR_
	HG-KR_
	HG-SR_
	HG-JR_
	HG-RR_
	HG-UR_
	HG-JR_

Note. For details, refer to "Part 8: Review on Replacement of Motor".

<b>POINT</b>	<ul style="list-style-type: none"> <li>● This document uses the terms "MR-J2S-compatible motor" and "MR-J2-compatible motor" to distinguish the following motors.                             <ul style="list-style-type: none"> <li>MR-J2S-compatible motor: HC- _FS motor (series), HA- _FS motor (series)</li> <li>MR-J2-compatible motor: HC- _F motor (series), HA- _F motor (series)</li> </ul> </li> </ul>
--------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

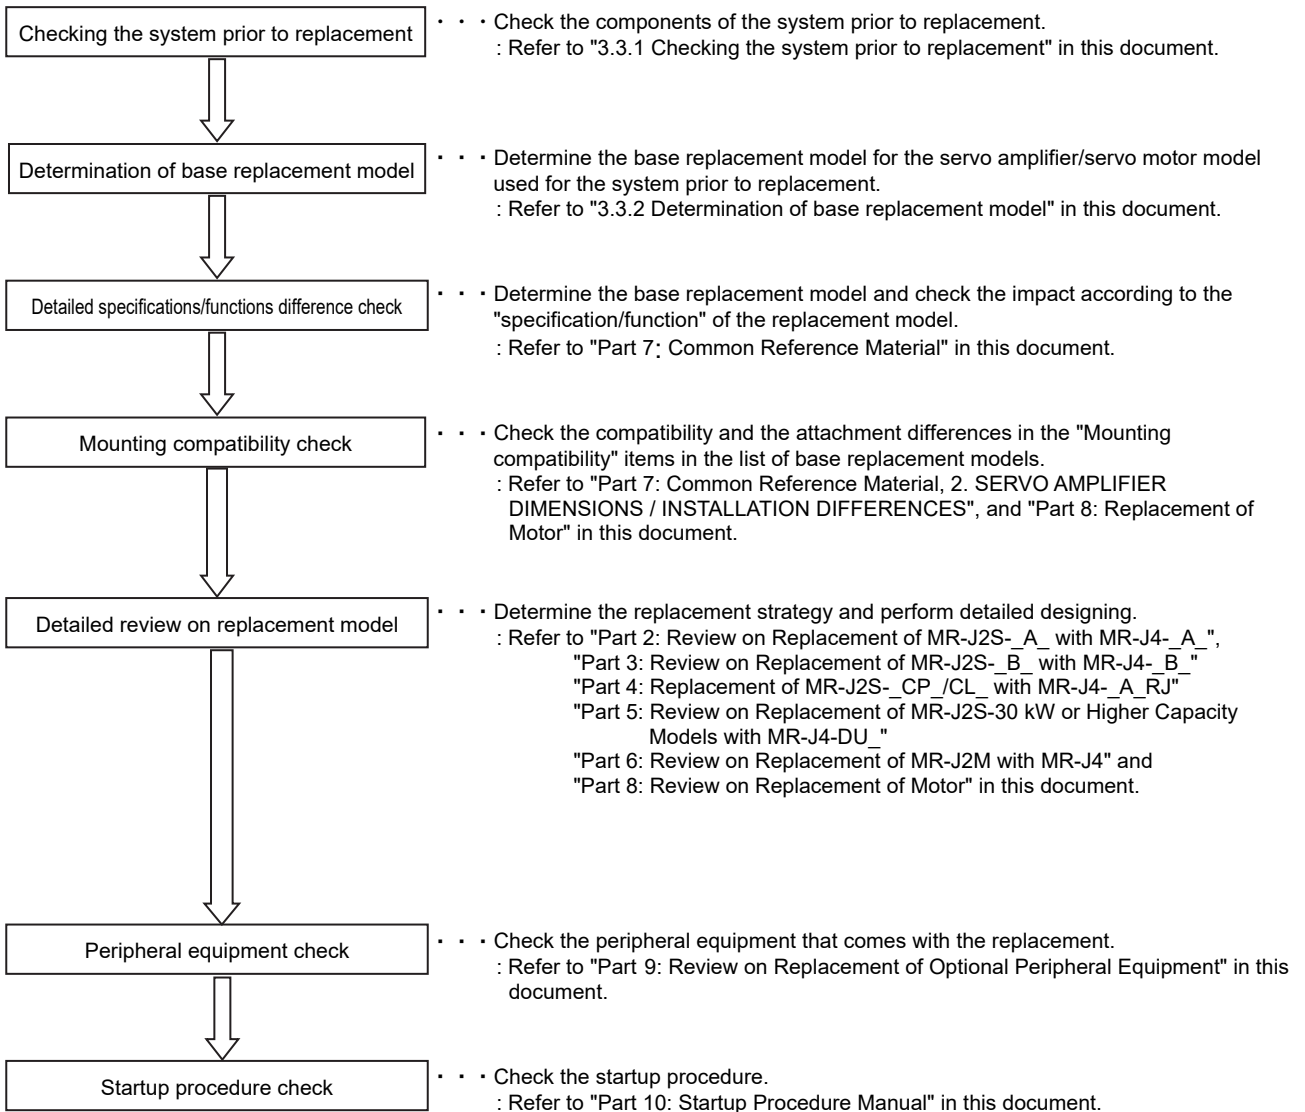

# Part 1: Summary of MR-J2S/MR-J2M Replacement

## 3. FLOW OF REPLACEMENT

### 3.1 Summary

This section describes the flow of replacement when replacing a system using the MR-J2S/MR-J2M series with a system using the MR-J4 series.

### 3.2 Flow of Review on Replacement

# Part 1: Summary of MR-J2S/MR-J2M Replacement

The following displays the review items when replacing MR-J2S series with MR-J4 series using MR-J2S-60A as an example case.

# Part 1: Summary of MR-J2S/MR-J2M Replacement

## Changes from MR-J2S series to MR-J4 series

POINT
<p>●The following table summarizes the changes from MR-J2S series to MR-J4 series.</p> <p>For details, refer to the reference document/items.</p>

Changes	Check items	Impact	Reference document/items
Servo amplifier	Connector	Connector shape, pin arrangement, signal abbreviation, and location are different.	Part 2, Section 3.4 Part 3, Section 3.5 Part 6, Section 3.3 Part 7, Section 1.2.2
	Terminal block	Terminal block shape, location, and method of drawing out wires are different.	Part 7, Section 1.2.1
	P3, P4 terminals	MR-J4 servo amplifier has P3 and P4 in the upstream of the inrush current suppression circuit. Note that the locations of the P1 and P terminals of MR-J2S-11K_ to MR-J2S-22K_ are different.	Part 7, Section 1.2.1
	Z-phase	Pulse width and start-up timing of the encoder Z phase pulse signal (OP) output from the servo amplifier are different.	Part 7, Section 1.2.9
	Parameter	Parameter numbers and contents are different. In addition, using the parameter converter function of MR Configurator2, GX Works2, and MT Developer2, it is possible to transfer the setup contents of the MR-J2S parameters to MR-J4.	Part 2, Section 3.6 Part 3, Section 3.7 Part 4, Section 3.6 Part 5, Chapter 3 Part 6, Section 3.5 Part 7, Section 2.3
	Dimensions	The height and width of the MR-J4 is equal to or less than that of the MR-J2S series. Check regarding room for wiring. (Note that the depth is larger for 400/600 W.)	Part 7, Chapter 2
	Interface 24 V DC power supply	For MR-J4, an external 24 V DC power supply is required for the interface.	Part 7, Section 1.2.5
	Dynamic brake coasting distance	The servo motor has a different dynamic brake coasting distance.	Part 7, Section 1.2.3
	Communication function	MR-J4 has no RS-232C. MR-J4 has the following communication functions. MR-J4-_A_: USB, RS-422 MR-J4-_B_: USB	Part 7, Section 1.2.7
	Forced stop deceleration	When MR-J4 is forcibly stopped in a factory setting and when an alarm occurs, the servo motor decelerates and stops. The way the servo motor stops is different from when the MR-J2S emergency stop or forced stop is effective.	Part 7, Section 1.2.4 MR-J4-_A_ Servo Amplifier Instruction Manual MR-J4-_B_ Servo Amplifier Instruction Manual
	Initializing time	The time it takes to reach servo-on from power-on is different.	Part 7, Section 1.2.8
	LED display	MR-J2S-_B_ has a 7-segment 2-digit LED display and MR-J4-_B_ has a 7-segment 3-digit display.	MR-J4-_B_ Servo Amplifier Instruction Manual
	Built-in regenerative resistor	Note that replacing MR-J2S-60_4 and MR-J2S-100_4 with MR-J4-60_4 and MR-J4-100_4 respectively changes the regenerative ability.	Part 9, Section 1.1
Options and peripheral equipment	Molded-case circuit breaker fuse	Those for MR-J2S may not be usable. Select those for MR-J4.	Part 9, Section 4.3
	Magnetic contactor	Those for MR-J2S may not be usable. Select those for MR-J4.	Part 9, Section 4.3
	Power factor improving AC reactor	Those for MR-J2S may not be usable. FR-HAL is recommended.	Part 9, Section 7.1 Part 9, Section 7.3 Part 9, Section 7.6 Part 9, Section 7.8
	Power factor improving DC reactor	Those for MR-J2S may not be usable. FR-HEL is recommended.	Part 9, Section 7.2 Part 9, Section 7.4 Part 9, Section 7.5 Part 9, Section 7.7

# Part 1: Summary of MR-J2S/MR-J2M Replacement

Changes	Check items	Impact	Reference document/items
Options and peripheral equipment	Regenerative option	Some regenerative options cannot be used for MR-J4.	Part 9, Chapter 1
	Setup software (SETUP161E)	Setup software (SETUP161E) cannot be used for MR-J4. Use MR Configurator2.	Part 9, Chapter 8
	Battery	Use MR-BAT6V1SET for MR-J4.	Part 7, Chapter 3 Part 9, Chapter 5
	Encoder cable	Replace the encoder cable because the shape of the CN2 connector is different. (Note 1)	Part 7, Section 1.2.2 Part 9, Chapter 3
	Wire	An HIV wire is recommended for MR-J4. Therefore, when HIV wires are not used for those already laid, use the renewal tool.	Part 9, Chapter 4
	Dynamic brakes	Some dynamic brakes cannot be used for MR-J4.	Part 9, Chapter 2
	EMC filter	The recommended EMC filter is different.	Part 9, Chapter 6
	Panel through attachment	The panel through attachment cannot be used for MR-J4.	Part 7, Chapter 2
Servo motor	Mounting compatibility	Some models have no mounting compatibility.	Part 8, Section 1.1
	Oil seal	Although HC-SFS, HC-UFS and HA-LFS series have an oil seal, substitute models do not come with an oil seal. Use models having an oil seal when necessary.	Part 8, Section 1.1
	Dimensions	The total length may differ depending on models.	Part 8, Section 2.1 Part 8, Section 2.2 Part 8, Section 2.3
	Reducer	The HG motor has no G2-type reducer for high precision applications. The reducer efficiency differs between G2-type and G7-type. In addition, the actual reduction ratio of HC-KFS and HC-MFS series G1 types may differ from that of HG-KR series G1 types depending on models.	Part 8, Section 2.3 Part 8, Section 2.4
	Moment of inertia	The moment of inertia of the HC-_FS/HA-_FS motor may differ from that of the HG motor depending on models. (Note 2)	Part 8, Section 2.5
	Load to motor inertia ratio	The range of the load to motor inertia ratio for the servo motor may differ between the HC-_FS/HA-_FS motor and the HG motor depending on models.	Part 8, Section 2.5
	Connector	The power connector, encoder connector, and electromagnetic brake connector may differ from one another in shape.	Part 8, Section 2.6
	Torque characteristics	The torque characteristics of the HC-_FS/HA-_FS motor may differ from those of the HG motor.	Part 8, Section 2.7
	Rated speed/maximum speed	The Rated speed/maximum speed of the HC-_FS/HA-_FS motor may differ from those of the HG motor.	Servo Motor Instruction Manual (Vol. 3)
	Thermal sensor	For HG-JR 1000 r/min series of 15 kW or more and HG-JR 1500 r/min series of 22 kW or more, the thermal sensor is replaced with a thermistor. For HG-JR 1000 r/min series of 12 kW or less and HG-JR 1500 r/min series of 15 kW or less, the thermal sensor is removed.	Servo Motor Instruction Manual (Vol. 3)
	Encoder resolution	The encoder resolution differs as follows. HC-_FS/HA-_FS motor: 131,072 pulses/rev HG motor: 4,194,304 pulses/rev	Servo Motor Instruction Manual (Vol. 3)
Controller (SSCNET interface only)	The SSCNET positioning module and motion controller need to be replaced with the SSCNET III/H positioning module and motion controller. When using an existing controller, refer to "[Appendix 1] MR-J4-_B_-RJ020+MR-J4-T20".	Replacement Manual for replacing the A17nSHCPUN/A173UHCP U series with the Q series	

Note 1. Use the renewal tool if using an existing encoder cable (including options).  
(Refer to "[Appendix 2] Introduction to Renewal Tool".)

For HA-LFS 1000 r/min series of 15 kW or more, HA-LFS 1500 r/min series of 22 kW or more, and HA-LFS 2000 r/min series of 30 kW or more, their substitute models have different thermal wiring from them. A new encoder cable is required when using the substitutes.

2. This may change the motor inertia, making it necessary to adjust the servo gain.

# Part 1: Summary of MR-J2S/MR-J2M Replacement

## 3.3 Review on Replacement

### 3.3.1 Checking the system prior to replacement

Check the components of the system prior to replacement.

Category	Controller model	Servo amplifier model		"Reference items" in this document	Remarks
Positioning module	QD75P(D)	MR-J2S- _A_	⇒	(1) MR-J2S series "Part 2: Review on Replacement of MR-J2S- _A_ with MR-J4- _A_ "	Positioning control
	A1SD75P(D)	MR-J2M- _A_			
Controller from another company	Controller from another company	MR-J2S- _A_ MR-J2M- _A_	⇒	(2) MR-J2M series "Part 6: Review on Replacement of MR-J2M with MR-J4"	Speed, torque limit
No controller connected	No controller	MR-J2S- _A_ MR-J2M- _A_	⇒		
SSCNET Positioning module	QD75M	MR-J2S- _B_	⇒	(1) MR-J2S series "Part 3: Review on Replacement of MR-J2S- _B_ with MR-J4- _B_ "	Positioning control
	A1SD75M	MR-J2M- _B_			
SSCNET Motion controller	Q17_CPUN	MR-J2S- _B_	⇒	(2) MR-J2M series "Part 6: Review on Replacement of MR-J2M with MR-J4"	
	A17_SHCPU	MR-J2M- _B_			
	A273UHCPU				
Built-in positioning function		MR-J2S- _CP_	⇒	(1) MR-J2S series "Part 4: Replacement of MR-J2S- _CP_/_CL_ with MR-J4- _A_ "	Built-in positioning function
Built-in program operation function		MR-J2S- _CL_	⇒		Built-in program operation function

# Part 1: Summary of MR-J2S/MR-J2M Replacement

## 3.3.2 Determination of base replacement model

### (1) Models for replacement between MR-J2S series and MR-J4 series

The models for replacement of both the servo amplifier and servo motor as a set are shown.

Series	Model	Replacement model (example)	Mounting compatibility (O: Compatible)	Note
200 V AC General-purpose interface	MR-J2S-10A	MR-J4-10A	○	Refer to "Part 7: Common Reference Material".

- Note 1. These replacement models do not have compatibility in mounting. Use the mounting plate holes of Renewal Tool manufactured by Mitsubishi Electric System & Service Co., Ltd. The servo amplifier capacity may vary depending on the servo motor to be replaced. Refer to Part 8 Section 1.1.
- Note 2. These replacement models do not have compatibility in mounting. Use the mounting plate holes of the mounting plate manufactured by Mitsubishi Electric System & Service Co., Ltd. The servo amplifier capacity may vary depending on the servo motor to be replaced. Refer to Part 8 Section 1.1.
- Note 3. Software version B3 or later.

### (2) Models for replacement between MR-J2M series and MR-J4 series

The models for replacement of both the servo amplifier and servo motor as a set are shown.

Series	Model			Replacement model (example)	Mounting compatibility (○: Compatible)	Note
	Base unit	Interface unit	Drive Unit			
200 V AC General-purpose interface	MR-J2M-BU_	MR-J2M-P8A	MR-J2M-10DU	MR-J4-10A	(Note)	Refer to "Part 7: Common Reference Material".
			MR-J2M-20DU	MR-J4-20A	(Note)	
			MR-J2M-40DU	MR-J4-40A	(Note)	
			MR-J2M-70DU	MR-J4-70A	(Note)	
200 V AC SSCNET interface	MR-J2M-BU_	MR-J2M-P8B	MR-J2M-10DU	MR-J4-10B	(Note)	
			MR-J2M-20DU	MR-J4-20B	(Note)	
			MR-J2M-40DU	MR-J4-40B	(Note)	
			MR-J2M-70DU	MR-J4-70B	(Note)	

Note. Refer to "Part 7: Common Reference Material" for the mounting hole dimensions.

## Part 1: Summary of MR-J2S/MR-J2M Replacement

### (3) Servo amplifier and servo motor combination for the MR-J4 series

Refer to "Part 8: Review on Replacement of Motor" when replacing the servo motor with the one that has already been installed.

(Refer to "[Appendix 2] Introduction to Renewal Tool" if using an existing cable and servo motor.)

#### (a) 100 V/200 V class

Servo amplifier	Rotary servo motor					
	HG-KR	HG-MR	HG-SR	HG-UR	HG-RR	HG-JR

## 4.3 Replacement Manual

(1) Replacement Manual for replacing the A17nSHCPU/A173UHCPU series with the Q series

## 4.4 Renewal Tool

(1) MR-J2S-\_A\_ renewal tool

(2) MR-J2S-\_B\_ renewal tool

## 4.5 Replacement Tool for Replacing MR-J2S series with MR-J4 series

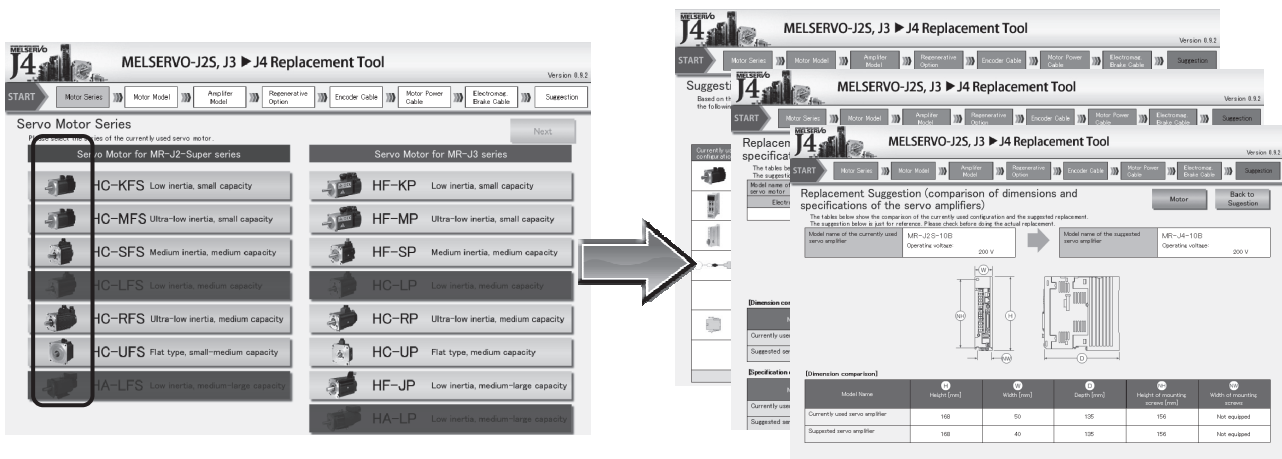

This tool is a reference for replacing the in-use MR-J2S series with the MR-J4 series.

When an in-use rotary servo motor or servo amplifier is selected, a corresponding MR-J4 series product can be selected.

Note: For details, contact your local sales office.

# Part 2: Review on Replacement of MR-J2S- \_A\_ with MR-J4- \_A\_

## Part 2: Review on Replacement of MR-J2S- \_A\_ with MR-J4- \_A\_

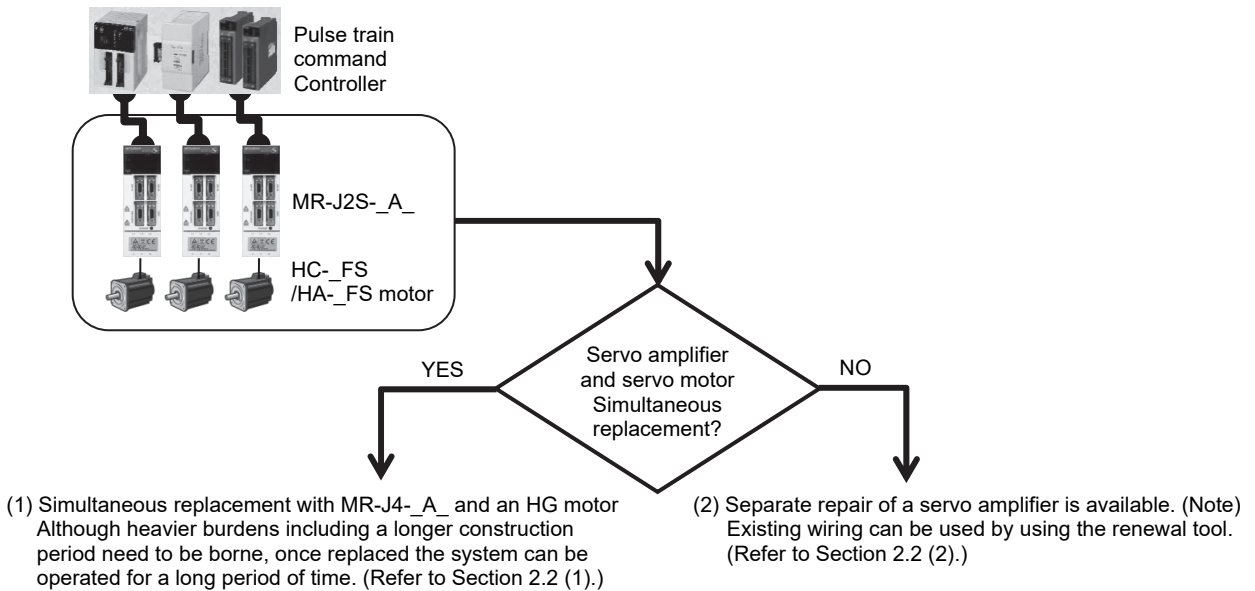

### 1. SUMMARY

This section describes the changes to be made when a system using MR-J2S- \_A\_ is replaced with a system using MR-J4- \_A\_.

### 2. CASE STUDY ON REPLACEMENT OF MR-J2S- \_A\_

#### 2.1 Review on Replacement Method

POINT
<ul style="list-style-type: none"> <li>● An HG motor cannot be driven by MR-J2S- _A_ . When a servo motor is replaced with an HG motor, servo amplifier also needs to be replaced with MR-J4- _A_ simultaneously.</li> </ul>

Note. Separate repair means replacement.

#### 2.2 Replacement Method

##### (1) Simultaneous replacement with MR-J4- \_A\_ and an HG motor

The currently used connectors or cables need to be replaced. The parameters of the existing system can be transferred with the parameter converter function of MR Configurator2. (Refer to "Part 7: Common Reference Material".)

## Part 2: Review on Replacement of MR-J2S- \_A\_ with MR-J4- \_A\_

### (2) Separate repair of servo amplifier/servo motor

POINT			
<ul style="list-style-type: none"> <li>● An HG motor cannot be driven by MR-J2S- _A_ . When a servo motor is replaced with an HG motor, servo amplifier also needs to be replaced with MR-J4- _A_ simultaneously.</li> <li>● When an "HC- _FS/HA- _FS motor" shown below is used, "simultaneous replacement with MR-J4- _A_ and an HG motor" is recommended. When an HG motor is adopted, the capacity of the servo amplifier needs to be changed. (Consider replacement, referring to "torque characteristics" described in "Part 8: Replacement of Motor".)</li> </ul>			
Existing device models		Replacement models for simultaneous replacement (example)

HC-RFS353(B)G7 1/_	MR-J2S-500A	HG-SR352(B)G7 1/_	MR-J4-350A

After replacement, an HC/HA motor can be driven by MR-J4- \_A\_ . Refer to "Part 7: Common Reference Material" for target motors.

When an HC- \_FS/HA- \_FS motor is driven by MR-J4- \_A\_ , it is necessary to set [Pr. PC22].

Refer to Part 7 Section 4.

Use the renewal tool when replacing a servo amplifier with MR-J4- \_A\_ without replacing the currently used servo motor and existing cables. (Refer to "[Appendix 2] Introduction to Renewal Tool".)

The parameters of the existing system can be transferred with the parameter converter function of MR Configurator2. (Refer to "Part 7: Common Reference Material".)

## Part 2: Review on Replacement of MR-J2S- \_A\_ with MR-J4- \_A\_

### 3. DIFFERENCES BETWEEN MR-J2S- \_A\_ AND MR-J4- \_A\_

#### 3.1 Function Comparison Table

Item	MR-J2S- _A_ series	MR-J4- _A_	Compatibility	Reference material/items
Control mode	Position control mode (pulse command) Speed control mode (analog command) Torque control mode (analog command)	←	○	
Maximum input pulses	Open-collector pulse: 200 kpulses/s Differential pulse : 500 kpulses/s Command pulse: Sink	Open-collector pulse: 200 kpulses/s Differential pulse: 4 Mpulses/s Command pulse: Sink	Note 1	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 3.6.1 (1)
The number of DIO points (excluding EM1)	DI: 8 points, DO: 6 points	DI: 9 points, DO: 6 points	○	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 5.2.4 [Pr. PD03] to [Pr. PD28]
Encoder pulse output	ABZ-phase (differential line driver) Z-phase (open collector)	←	Note 2	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 5.2.1 [Pr. PA15]
DIO interface	Input: Sink/source Output: Sink	Input: Sink/source Output: Sink/source	○	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 3.9
Analog input/output	(Input) 2ch 10-bit torque, 14-bit speed or equivalent (Output) 10-bit or equivalent × 2 ch	←	○	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 3.6
Number of internal speed commands	7	←	○	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 3.6.2 (1) (b)
Parameter setting method	Push button Setup software (SETUP161E)	Push button MR Configurator2	○	MR-J4- _A_ Servo Amplifier Instruction Manual, Chapter 4
Button	4 buttons	←	○	MR-J4- _A_ Servo Amplifier Instruction Manual, Chapter 4
LED display	7-segment 5-digit	←	○	MR-J4- _A_ Servo Amplifier Instruction Manual, Chapter 4
Communication function	RS-422/RS-232C	RS-422/USB	○	MR-J4- _A_ Servo Amplifier Instruction Manual, Chapter 14
Command pulse logic setting	Forward/reverse rotation pulse train Signed pulse train A-phase/B-phase pulse train	←	○	Part 2, Section 3.7
Interface 24 V DC power supply	Installed.	Not installed.	×	Part 7, Section 1.2.5
Initializing time	1 to 2 s	2.5 to 3.5 s	×	Part 7, Section 1.2.8
Z-phase pulse width	At low speed: About 6 ms (Note 3) At high speed: About 440 μs	At low speed: About 6 ms (Note 3) At high speed: About 440 μs	×	Part 7, Section 1.2.9

Note 1. Depending on the servo motor being used, "Electronic gear" needs to be set.

2. The parameters need to be set due to output pulse settings.

3. This is the pulse width when the motor rotates at 10 r/min. The pulse width changes depending on rotational frequency.

## Part 2: Review on Replacement of MR-J2S- \_A\_ with MR-J4- \_A\_

Setup software		Setup software (SETUP161E) is available for free.	MR Configurator2	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 11.7
Linear servo system		×	<input type="radio"/>	MR-J4- _A_ Servo Amplifier Instruction Manual, Chapter 15
Direct drive servo system		×	<input type="radio"/>	MR-J4- _A_ Servo Amplifier Instruction Manual, Chapter 16
Fully closed loop system		×	<input type="radio"/>	MR-J4- _A_ Servo Amplifier Instruction Manual, Chapter 17
STO function		×	<input type="radio"/>	MR-J4- _A_ Servo Amplifier Instruction Manual, Chapter 13

Note. This function is provided by advanced vibration suppression control II.

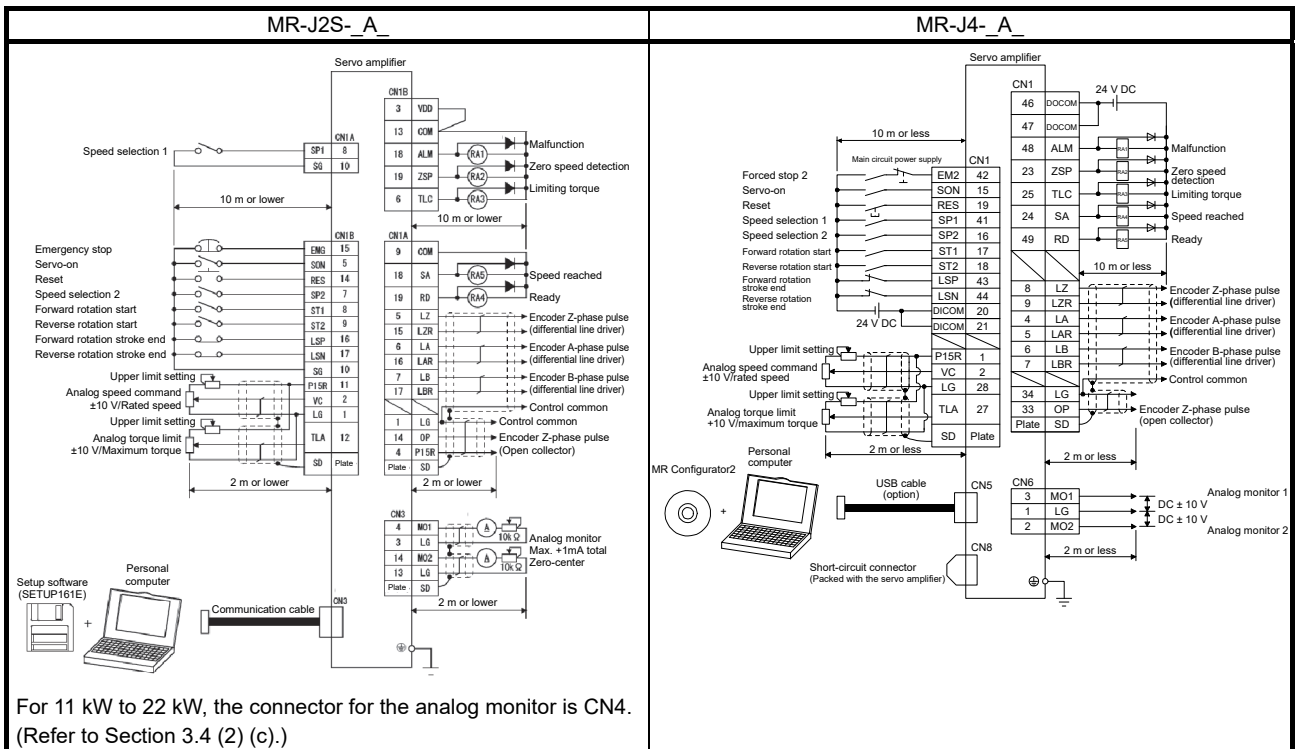

# Part 2: Review on Replacement of MR-J2S- A\_ with MR-J4- A\_

## 3.3 Comparison of Standard Connection Diagrams

### (1) Position control mode

### (2) Speed control mode

# Part 2: Review on Replacement of MR-J2S- A\_ with MR-J4- A\_

## (3) Torque control mode

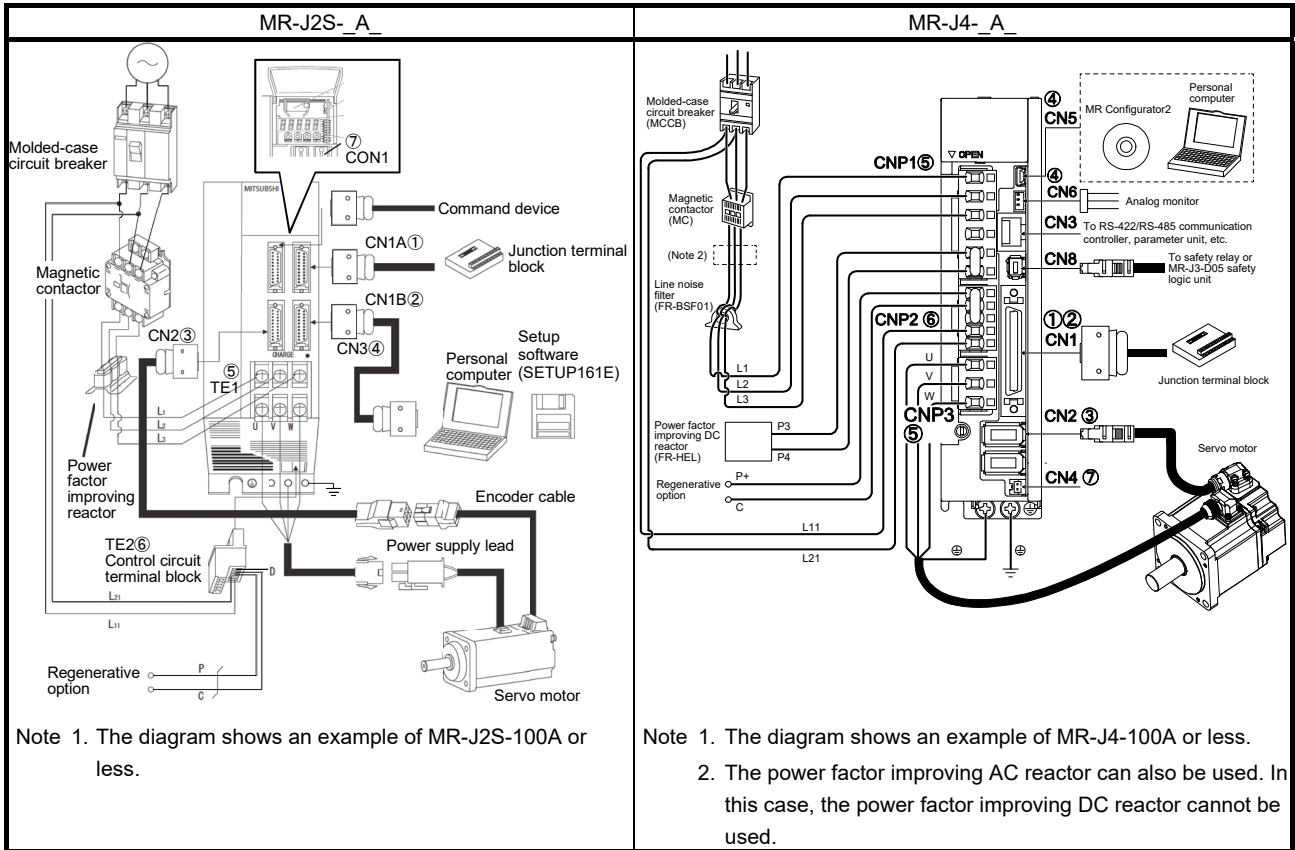

# Part 2: Review on Replacement of MR-J2S- \_A\_ with MR-J4- \_A\_

## 3.4 List of Corresponding Connectors and Terminal Blocks

### (1) Connector comparison table

An example of connections with the peripheral equipment is shown below. For details on signals, refer to each servo amplifier instruction manual.

### (2) List of connector and terminal block correspondence

MR-J2S- _A_		MR-J4- _A_	Note
(1)	I/O signal connector [CN1A]	I/O signal connector [CN1]	Prepare a new cable.
(2)	I/O signal connector [CN1B]		
(3)	Encoder connector [CN2]	Encoder connector [CN2]	Must switch to encoder cable (option) or prepare a new cable.
(4)	Communication connector [CN3]	PC connection	USB communication connector [CN5]
		Analog monitor	Analog monitor connector [CN6]
(5)	Main circuit terminal block [TE1]	Input power supply	Main circuit power connector [CNP1]
		Servo motor power supply	Servo motor power connector [CNP3]
(6)	Control circuit terminal block [TE2]	Control circuit power connector [CNP2]	Switch to the power connector (enclosed with the amplifier).
(7)	Battery connector [CON1]	Battery connector [CN4]	Prepare a new battery.

When not using the STO function in MR-J4- \_A\_ , attach the short-circuit connector supplied with the servo amplifier to CN8 (STO input signal connector).

The configuration of the main circuit terminal block differs depending on the capacity. Refer to "Part 7: Common Reference Material".

## Part 2: Review on Replacement of MR-J2S- \_A\_ with MR-J4- \_A\_

### (3) Comparison of signals

Note. Signal abbreviations in parentheses are for MR-J4- \_A\_.

## Part 2: Review on Replacement of MR-J2S- \_A\_ with MR-J4- \_A\_

(c) CN4 (11 kW to 22 kW only)

MR-J2S- _A_		Signal symbol	MR-J4- _A_	
Connector pin assignment	Connector pin No.		Connector pin No.	Connector pin assignment
	CN4-1	MO1	CN6-3	
	CN4-2	MO2	CN6-2	
	CN4-4	LG	CN6-1	

### 3.5 Comparison of Peripheral Equipment

POINT
● Refer to "Part 9: Replacement of Optional Peripheral Equipment".

## Part 2: Review on Replacement of MR-J2S- \_A\_ with MR-J4- \_A\_

### 3.6 Comparison of Parameters

	<p><b>CAUTION</b></p> <ul style="list-style-type: none"> <li>● Never perform extreme adjustments and changes to the parameters, otherwise the operation may become unstable.</li> <li>● If fixed values are written in the digits of a parameter, do not change these values.</li> <li>● Do not change parameters for manufacturer setting.</li> <li>● Do not enter any setting value other than those specified for each parameter.</li> </ul>
-----------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<p><b>POINT</b></p>	<ul style="list-style-type: none"> <li>● For the parameter converter function, refer to "Part 7: Common Reference Material".</li> <li>● To enable a parameter whose abbreviation is preceded by *, turn the power OFF and then ON after setting the parameter.</li> <li>● For details about parameter settings for replacement, refer to the MR-J4- _A_ Servo Amplifier Instruction Manual.</li> <li>● With MR-J4- _A_, the deceleration to a stop function is enabled by factory settings. To disable the deceleration to a stop function, set [Pr. PA04] to "0 _ _ _".</li> </ul>
---------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

#### 3.6.1 Setting requisite parameters upon replacement

The parameters shown in this section are a minimum number of parameters that need to be set for simultaneous replacement. Depending on the settings of the currently used servo amplifier, parameters other than these may need to be set.

##### (1) Parameters common to position control mode, speed control mode, and torque control mode

Parameter number	Name	Initial value	Setting value	Description
PA04	Function selection A-1	2 0 0 0h	0 0 0 0h	Forced stop deceleration function selection To configure the same settings as for MR-J2S- _A_, select "Forced stop deceleration function disabled (EM1)".
PA09	Auto tuning response	16	8	Auto tuning response setting Refer to "3.6.3 Comparison of parameter details" for the setting value of this parameter upon replacement. It is necessary to make gain adjustment again when replacing. For details about gain adjustment, refer to "MR-J2S- _A_ [Pr. 2] (MR-J4- _A_ [Pr. PA09])" in Section 3.6.3.
PA15	Encoder output pulse	4000	128 (Note)	Used to set the encoder pulses (A-phase and B-phase) output by the servo amplifier.
PC19	Encoder output pulse selection	0 0 0 0h	0 _ 1_h (Note)	Encoder output pulse selection Used to set the encoder pulses output by the servo amplifier. The setting value at left is according to the dividing ratio setting.
PD30	Function selection D-1	0 0 0 0h	1 _ _ _h	This is used to select enabled or disabled for the thermistor of the servo motor. : When using (HA-LFS series) servo motors that have thermal terminals and not connecting thermal signals to the MR-J4 servo amplifier, set this parameter to "1 _ _ _h (Disabled)". The overheat protection of a servo motor is not enabled. Configure a protective circuit.

Note. The example value shown is for when the output pulse setting of an existing HC-KFS motor (encoder resolution: 131072 pulses/rev) is "Dividing ratio: 1/4".

## Part 2: Review on Replacement of MR-J2S- \_A\_ with MR-J4- \_A\_

### (2) Position control mode

Parameter number	Name	Initial value	Setting value	Description
PA01	Operation mode	1 0 0 0h	__ __ 0h	Select the servo amplifier control mode. Select the position control mode.
PA06	Electronic gear numerator (Commanded pulse multiplication numerator)	1	256 (Note)	When using an electronic gear, it is necessary to change the setting value. For simultaneous replacement, set a value by calculating as follows:  $\text{Replacement servo motor} \quad \text{CMX} = \frac{\text{Encoder resolution}}{\text{Servo motor for MR-J2S}} \cdot \text{Former CMX} = \frac{4194304}{131072} \cdot \frac{1}{8} = \frac{256}{1}$ CDV = When a geared servo motor is replaced, the actual reduction ratio may differ before and after the replacement. If the ratio differs after the replacement, set the values considering the actual reduction ratio.
PA07	Electronic gear denominator (Commanded pulse multiplication denominator)	1	1 (Note)	
PA13	Command pulse input form	0 1 0 0h	_ x _ _h	Command input pulse train filter selection Selecting the proper filter enables noise immunity enhancement. Make sure to select a filter so as not to cause a position mismatch. For details, refer to "MR-J4- _A_ [Pr. PA13]" in Section 3.6.3.  In addition, it is necessary to adjust the command pulse logic to the positioning module. An incorrect logic setting causes the servo motor to not rotate. Make sure to configure the settings. Refer to "3.7 Important Points for Replacement (Command Pulse Logic Settings)".

Note. The example value shown is for when the electronic gear ratio of an existing servo amplifier is set as "8/1".

### (3) Speed control mode

Parameter number	Name	Initial value	Setting value	Description
PA01	Operation mode	1 0 0 0h	__ __ 2h	Select the servo amplifier control mode. Select the speed control mode.
PC12	Analog speed command - Maximum speed	0	3000	Analog speed command - Maximum speed The setting value at left is for when the HC-SFS53 motor is replaced with the HG-SR52 motor.

### (4) Torque control mode

Parameter number	Name	Initial value	Setting value	Description
PA01	Operation mode	1 0 0 0h	__ __ 4h	Select the servo amplifier control mode. Select the torque control mode.
PC12	Analog speed limit - Maximum speed	0	3000	Analog speed limit - Maximum speed The setting value at left is for when the HC-SFS53 motor is replaced with the HG-SR52 motor.
PC13	Analog torque command - Maximum output	100.0	100.0	Analog torque command - Maximum output Set the same value as for the MR-J2S- _A_ servo amplifier.

## Part 2: Review on Replacement of MR-J2S- \_A\_ with MR-J4- \_A\_

### 3.6.2 Parameter comparison list

<b>POINT</b>
● Manufacturer setting parameters are not described here.

MR-J2S- _A_ parameters					MR-J4- _A_ parameters						
No.	Abbreviation	Parameter name		Initial value	Customer setting value	No.	Abbreviation	Parameter name		Initial value	Customer setting value
0	*STY	Control mode, Regenerative option selection	Control mode	0000h		PA01	*STY	Operation mode		1000h	
			Regenerative option			PA02	*REG	Regenerative option		0000h

2	<p>Auto Tuning</p> <p>Select a response level, etc. when performing auto tuning.</p> <div style="border: 1px solid black; display: inline-block; padding: 2px;">0</div> <span style="margin-left: 20px;">0</span> <span style="margin-left: 20px;">0</span>					

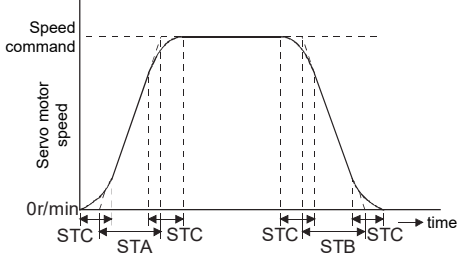

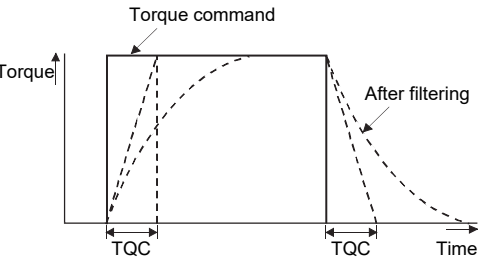

## Part 2: Review on Replacement of MR-J2S- \_A\_ with MR-J4- \_A\_

MR-J2S- _A_			MR-J4- _A_			
No.	Name and function	Initial value	No.	Name and function	Initial value	Control mode
5	<p>In-position range Used to set the range where INP (positioning completion) is output by the command pulse unit before an electronic gear is calculated. For example, when wanting to set 100 μm in a state of direct connection to the ball screw, a lead wire length of 10 mm, a feedback pulse number of 131072 pulses/rev, and electronic gear numerator (CMX) / electronic gear denominator (CDV) = 16384/125 (unit setting of 10 μm per pulse), set "10", as shown in the equation below.</p> $\frac{100 [\mu\text{m}] \times 10^{-6}}{10 [\text{mm}] \times 10^{-3}} \times 131072 [\text{pulse/rev}] \times \frac{125}{16384} \doteq 10$	100	PA10	<p>In-position range Used to set an in-position range per command pulse unit. Set the same value as for MR-J2S- _A_.</p>	100	P
6	<p>Position loop gain 1 Used to set the gain of the position loop. Increase the gain to improve track ability in response to the position command. When auto tuning mode 1 or 2 is selected, the auto tuning result is automatically used.</p>	<p>7 kW or less: 35</p> <p>11 kW or more: 19</p>	PB07	<p>Model loop gain Used to set the response gain till the set position. If the setting value is increased, traceability for position command is improved. However, if the setting value is too large, it tends to generate vibration and noise. This parameter can be set either automatically or manually depending on the [Pr. PA08] setting.</p>	15.0	P
7	<p>Position command acceleration/deceleration time constant (Position smoothing) This is used to set the constant of a primary delay to the position command. The control method can be selected from Primary delay and Linear acceleration/deceleration in [Pr. 55]. The setting range of Linear acceleration/deceleration is 0 to 10 ms. When setting a value of 10 ms or more, the setting value is recognized as 10 ms.</p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>POINT</b></p> <p>● When Linear acceleration/deceleration is selected, do not select Control switching ([Pr. 0]) and Restart after instantaneous power failure ([Pr. 20]). Selecting them will cause the servo motor to make a sudden stop at the time of position control switching or at restart.</p> </div> <p>(Example) When a command is given from a synchronizing encoder, synchronous operation will start smoothly even if it starts during line operation.</p>  	3	PB03	<p>Position command acceleration/deceleration time constant (Position smoothing) This is used to set the constant of a primary delay to the position command. Set the same value as for MR-J2S- _A_.</p>	0	P

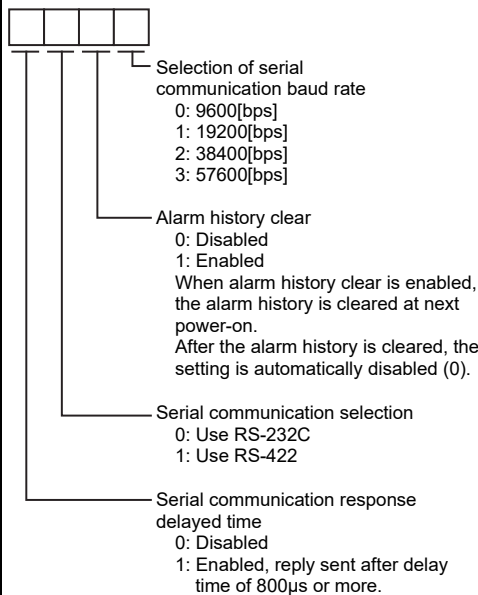

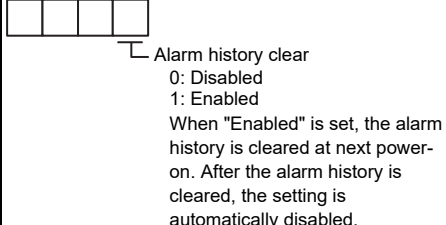

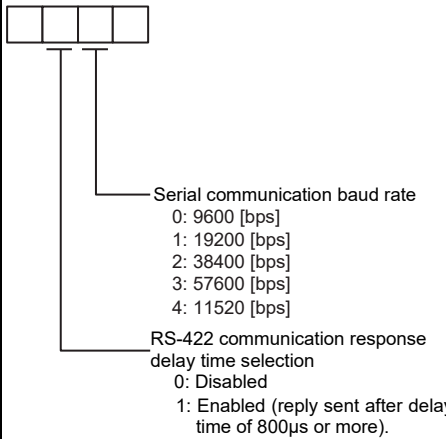

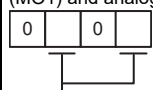

## Part 2: Review on Replacement of MR-J2S- \_A\_ with MR-J4- \_A\_

MR-J2S- _A_			MR-J4- _A_			Control mode
No.	Name and function	Initial value	No.	Name and function	Initial value	
66	Gain switching condition Used to set the values for the gain switching conditions (command frequency, droop pulses, and servo motor speed) selected in [Pr. 65]. The set value unit differs depending on the switching condition item. Setting range: 0 to 9999	10	PB27	Gain switching condition Used to set the values for the gain switching conditions (command frequency, droop pulses, and servo motor speed) selected in [Pr. PB26]. The set value unit differs depending on the switching condition item. Setting range: 0 to 9999 Set the same value as for MR-J2S- _A_.	10	P S
67	Gain switching time constant Used to set the time constant at which the gains will switch in response to the conditions set in [Pr. 65] and [Pr. 66]. Setting range: 0 to 100	1	PB28	Gain switching time constant Used to set the time constant at which the gains will switch in response to the conditions set in [Pr. PB26] and [Pr. PB27]. Setting range: 0 to 100 Set the same value as for MR-J2S- _A_.	1	P S
69	Command pulse multiplication numerator 2 Used to set a multiplier for the command pulse. When "0" is set as the setting value, the resolution of the connected motor is set automatically. Setting range: 0 to 65535 When using this parameter, enable the CM1 and CM2 signals in [Pr. 43] to [Pr. 48].	1	PC32	Commanded pulse multiplication numerators 2 to 4 To enable the parameter, select "Electronic gear (0 _ _ _)" or "J3A electronic gear setting value compatibility mode (2 _ _ _)" in "Electronic gear selection" in [Pr. PA21]. Setting range: 0 to 16777215 When using this parameter, enable the CM1 and CM2 signals in [Pr. PD03] to [Pr. PD22].	1	P
70	Command pulse multiplication numerator 3 Used to set a multiplier for the command pulse. When "0" is set as the setting value, the resolution of the connected motor is set automatically. Setting range: 0 to 65535 When using this parameter, enable the CM1 and CM2 signals in [Pr. 43] to [Pr. 48].	1	PC33	Set as follows. (1) For primary replacement Set the same value as the setting value for MR-J2S- _A_. (2) For secondary/simultaneous replacement Set a value 32 x the MR-J2S- _A_ setting value.	1	P
71	Command pulse multiplication numerator 4 Used to set a multiplier for the command pulse. When "0" is set as the setting value, the resolution of the connected motor is set automatically. Setting range: 0 to 65535 When using this parameter, enable the CM1 and CM2 signals in [Pr. 43] to [Pr. 48].	1	PC34		1	P
72	Internal speed command 4 Used to set speed 4 of internal speed commands. When using this parameter, enable the SP3 signal in [Pr. 43] to [Pr. 48].	200	PC08	Internal speed command 4 This is used to set speed 4 of internal speed commands. When using this parameter, enable the SP3 signal in [Pr. PD03] to [Pr. PD22]. Set the same value as for MR-J2S- _A_.	200	S
	Internal speed limit 4 Used to set speed 4 of internal speed limits. When using this parameter, enable the SP3 signal in [Pr. 43] to [Pr. 48].			Internal speed limit 4 This is used to set speed 4 of internal speed limits. When using this parameter, enable the SP3 signal in [Pr. PD03] to [Pr. PD22]. Set the same value as for MR-J2S- _A_.		T

## Part 2: Review on Replacement of MR-J2S- \_A\_ with MR-J4- \_A\_

MR-J2S- _A_			MR-J4- _A_			Control mode
No.	Name and function	Initial value	No.	Name and function	Initial value	
73	Internal speed command 5 Used to set speed 5 of internal speed commands. When using this parameter, enable the SP3 signal in [Pr. 43] to [Pr. 48].	300	PC09	Internal speed command 5 This is used to set speed 5 of internal speed commands. When using this parameter, enable the SP3 signal in [Pr. PD03] to [Pr. PD22]. Set the same value as for MR-J2S- _A_.	300	S
	Internal speed limit 5 Used to set speed 5 of internal speed limits. When using this parameter, enable the SP3 signal in [Pr. 43] to [Pr. 48].			Internal speed limit 5 This is used to set speed 5 of internal speed limits. When using this parameter, enable the SP3 signal in [Pr. PD03] to [Pr. PD22]. Set the same value as for MR-J2S- _A_.		T
74	Internal speed command 6 Used to set speed 6 of internal speed commands. When using this parameter, enable the SP3 signal in [Pr. 43] to [Pr. 48].	500	PC10	Internal speed command 6 This is used to set speed 6 of internal speed commands. When using this parameter, enable the SP3 signal in [Pr. PD03] to [Pr. PD22]. Set the same value as for MR-J2S- _A_.	500	S
	Internal speed limit 6 Used to set speed 6 of internal speed limits. When using this parameter, enable the SP3 signal in [Pr. 43] to [Pr. 48].			Internal speed limit 6 This is used to set speed 6 of internal speed limits. When using this parameter, enable the SP3 signal in [Pr. PD03] to [Pr. PD22]. Set the same value as for MR-J2S- _A_.		T
75	Internal speed command 7 Used to set speed 7 of internal speed commands. When using this parameter, enable the SP3 signal in [Pr. 43] to [Pr. 48].	800	PC11	Internal speed command 7 This is used to set speed 7 of internal speed commands. When using this parameter, enable the SP3 signal in [Pr. PD03] to [Pr. PD22]. Set the same value as for MR-J2S- _A_.	800	S
	Internal speed limit 7 Used to set speed 7 of internal speed limits. When using this parameter, enable the SP3 signal in [Pr. 43] to [Pr. 48].			Internal speed limit 7 This is used to set speed 7 of internal speed limits. When using this parameter, enable the SP3 signal in [Pr. PD03] to [Pr. PD22]. Set the same value as for MR-J2S- _A_.		T
76	Internal torque limit 2 Set the parameter assuming that the maximum torque is 100 [%]. The parameter is for limiting the torque of the servo motor. When "0" is set, no torque is generated. When using this parameter, enable the TL1 signal in [Pr. 43] to [Pr. 48].	100	PC35	Internal torque limit 2 Used to set the parameter assuming that the maximum torque is 100.0%. The parameter is for limiting the torque of the servo motor. However, when "0.0" is set, no torque is generated. Setting range: 0.0 to 100.0 When using this parameter, enable the TL1 signal in [Pr. PD03] to [Pr. PD22]. Set the same value as for MR-J2S- _A_.	100.0	P S T

## Part 2: Review on Replacement of MR-J2S- \_A\_ with MR-J4- \_A\_

### 3.7 Important Points for Replacement (Command Pulse Logic Settings)

When carrying out positioning in the forward and reserve rotation pulse train setting for the MR-J4- \_A\_ servo amplifier, it is necessary to adjust the command pulse logic of the positioning module to that of the servo amplifier. Set as follows. This adjustment is unnecessary for a pulse train + symbol and an A-phase/B-phase pulse train.

 <b>CAUTION</b>	<p>● Even though the command pulse logic of the existing MR-J2S- _A_ servo amplifier is not the same as its positioning module, the servo motor will rotate, but in the MR-J4- _A_ servo amplifier, when the logics are not set correctly, the servo motor will not rotate normally. Make sure to check the information below to set the logics. Even when another company's controller is used, check the logic setting.</p>
--------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

#### (1) For A-series positioning modules

Signal type	Command pulse logic setting (Note 1)	
	A-series positioning module Basic parameter 1 setting	MR-J4- _A_ servo amplifier [Pr. PA13] setting
Open-collector type	Positive logic	Positive logic ( _ 0 _ h)
Differential line driver type	Positive logic (Note 2)	Negative logic ( _ 1 _ h)

- Note 1. When a pulse train + symbol and an A-phase/B-phase pulse train are used, it is unnecessary to adjust the logics.  
 2. For A-series and Q-series positioning modules, this logic points to the N-side waveform. Therefore, reverse the command pulse logic of the servo amplifier.

#### (2) For Q-series positioning modules

Signal type	Command pulse logic setting (Note 1)	
	Q-series positioning module [Pr. 23] setting	MR-J4- _A_ servo amplifier [Pr. PA13] setting
Open-collector type	Positive logic	Positive logic ( _ 0 _ h)
	Negative logic	Negative logic ( _ 1 _ h)
Differential line driver type	Positive logic (Note 2)	Negative logic ( _ 1 _ h)
	Negative logic (Note 2)	Positive logic ( _ 0 _ h)

- Note 1. When a pulse train + symbol and an A-phase/B-phase pulse train are used, it is unnecessary to adjust the logics.  
 2. For A-series and Q-series positioning modules, this logic points to the N-side waveform. Therefore, reverse the command pulse logic of the servo amplifier.

#### (3) For F-series positioning modules

Signal type	Command pulse logic setting	
	F-series positioning module (fixed)	MR-J4- _A_ servo amplifier [Pr. PA13] setting
Open-collector type	Negative logic	Negative logic ( _ 1 _ h)

## Part 2: Review on Replacement of MR-J2S- \_A\_ with MR-J4- \_A\_

[Reference] Pr. PA13, Command input pulse train form

Setting value		Pulse train form	Forward rotation (positive direction) command	Reverse rotation (negative direction) command
-- 10h	Negative logic	Forward rotation pulse train (positive direction pulse train) Reverse rotation pulse train (negative direction pulse train)	PP  NP 	
-- 11h		Signed pulse train	PP  NP 	
-- 12h		A-phase pulse train B-phase pulse train	PP  NP 	
-- 00h	Positive logic	Forward rotation pulse train (positive direction pulse train) Reverse rotation pulse train (negative direction pulse train)	PP  NP

## Part 3: Review on Replacement of MR-J2S-\_\_B\_\_ with MR-J4-\_\_B\_\_

---

### Part 3: Review on Replacement of MR-J2S-\_\_B\_\_ with MR-J4-\_\_B\_\_

#### 1. SUMMARY

This document describes the changes that are applied to when replacing a system using the MR-J2S-\_\_B\_\_ with a system using the MR-J4-\_\_B\_\_.

Versions of A-series motion controller OS that support MR-J2S-\_\_B\_\_

Controller setting	OS model	OS version
A171SHCPU(N)	SW0SRX-SV13G	AF and later versions
	SW0SRX-SV22F	
	SW0SRX-SV43F	T and later versions
A172SHCPU(N)	SW3RN-SV13D	G and later versions
	SW3RN-SV22C	
	SW0SRX-SV13D	AF and later versions
	SW0SRX-SV22C	
	SW0SRX-SV43C	T and later versions
A173UHCPU(-S1)	SW3RN-SV13B	G and later versions
	SW3RN-SV22A	
	SW2SRX-SV13B	AF and later versions
	SW2SRX-SV22A	
	SW2SRX-SV43A	T and later versions
A273UHCPU	SW2SRX-SV13V	AF and later versions
	SW2SRX-SV22U	
		SW2SRX-SV43U
A273UHCPU-S3	SW3RN-SV13X	G and later versions
	SW3RN-SV22W	

2. CASE STUDY ON REPLACEMENT OF MR-J2S-\_B\_

2.1 Review on Replacement Method

For details about (3) and (4), refer to "[Appendix 1] Summary of MR-J4-\_B\_-RJ020 + MR-J4-T20".

- Note
1. Although heavier burdens including a longer construction period need to be borne, once replaced the system can be operated for a long period of time.
  2. When designing a new system, apply simultaneous replacement at (1).
  3. Separate repair means replacement.
  4. When the servo motor is replaced with an HG motor, simultaneous replacement with MR-J4-\_B\_ and an HG motor is necessary.

# Part 3: Review on Replacement of MR-J2S-\_B\_ with MR-J4-\_B\_

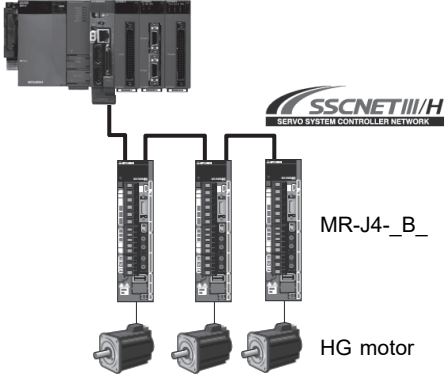

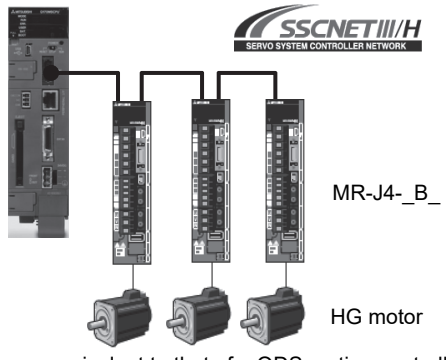

## 2.2 Replacement Method

This section shows replacements using a QDS motion controller and an SSCNETIII/H-compatible stand-alone motion controller as examples.

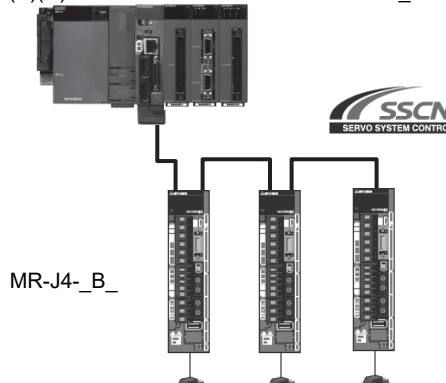

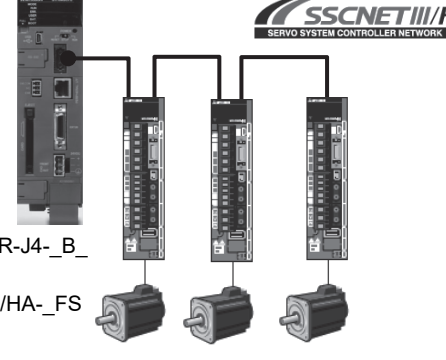

For replacements using modules other than the above, refer to the following manuals.

- Transition from A17nSHCPUN/A173UHCPU Series to Q Series Handbook

### (1) For simultaneous replacement

QDS motion controller + MR-J4-_B_ + HG motor	Stand-alone motion controller + MR-J4-_B_ + HG motor
<p>QnUD(E)(H)CPU + QDS motion controller + Q3_DB</p>  <p>MR-J4-_B_</p> <p>HG motor</p> <p>High-speed motion control and excellent extensibility can reduce cycle time.</p> <p>"QDS motion controller" refers to the following model.</p> <ul style="list-style-type: none"> <li>• Q172DSCPU</li> <li>• Q173DSCPU</li> </ul>	<p>SSCNET III/H-compatible stand-alone motion controller: Q170MSCPU (-S1)</p>  <p>MR-J4-_B_</p> <p>HG motor</p> <p>High performance equivalent to that of a QDS motion controller can be achieved at a lower cost.</p> <p>"Stand-alone motion controller" refers to the following model.</p> <ul style="list-style-type: none"> <li>• Q170MSCPU(-S1)</li> </ul>

### (2) For replacement of a controller and a servo amplifier

QDS motion controller + MR-J4-_B_ + HC-_FS/HA-_FS motor	Stand-alone motion controller + MR-J4-_B_ + HC-_FS/HA-_FS motor
<p>QnUD(E)(H)CPU + QDS motion controller + Q3_DB</p>  <p>MR-J4-_B_</p> <p>HC-_FS/HA-_FS motor</p>	<p>SSCNET III/H-compatible stand-alone motion controller: Q170MSCPU(-S1)</p>  <p>MR-J4-_B_</p> <p>HC-_FS/HA-_FS motor</p>

Although the HC/HA motor can continue to be used without any changes made (Note 1 and 2), the encoder resolution of the servo motor will be 17 bits.

- Note
1. Consider simultaneous replacement of devices when designing a new system.
  2. Please contact your local sales office for the target servo motor and servo amplifier.

## Part 3: Review on Replacement of MR-J2S- \_B\_ with MR-J4- \_B\_

### POINT

- If the existing system is any of the combinations in the following table, it is recommended to replace both the servo amplifier and servo motor with an MR-J4- \_B\_ and HG motor at the same time. When an HG motor is adopted, the capacity of the servo amplifier needs to be changed. (Consider replacement, referring to "torque characteristics" described in "Part 8: Replacement of Motor".)

Existing device models		Replacement models for simultaneous replacement (example)	
Servo motor	Servo amplifier	Servo motor	Servo amplifier
HC-LFS52	MR-J2S-60B	HG-JR73	MR-J4-70B
HC-LFS102	MR-J2S-100B	HG-JR153	MR-J4-200B
HC-LFS152	MR-J2S-200B	HG-JR353	MR-J4-350B

# Part 3: Review on Replacement of MR-J2S- \_B\_ with MR-J4- \_B\_

## (3) Gradual replacement of MR-J2S- \_B\_ with MR-J4- \_B\_

Refer to "[Appendix 1] Summary of MR-J4- \_B\_ -RJ020 + MR-J4-T20".

- Note 1. MR-J4- \_B\_ -RJ020 equipped with the SSCNET conversion unit operates as MR-J2S- \_B\_ .  
 Note 2. It is necessary to change MR-J4- \_B\_ -RJ020 from J2S mode to J4 mode. Remove MR-J4-T20.  
 Refer to "[Appendix 1] Summary of MR-J4- \_B\_ -RJ020 + MR-J4-T20".

## (4) For separate repair

POINT
<ul style="list-style-type: none"> <li>● MR-J2S- _B_ cannot drive an HG motor. When the servo motor is replaced with an HG motor, simultaneous replacement with MR-J4- _B_ and an HG motor is necessary.</li> <li>● When a servo amplifier other than MR-J2S-B series and MR-J2M-B series is used with a controller, the MR-J4-B-RJ020 SSCNET conversion unit cannot be used.</li> </ul>

Refer to "[Appendix 1] Summary of MR-J4- \_B\_ -RJ020 + MR-J4-T20".

Note. Separate repair means replacement.

## Part 3: Review on Replacement of MR-J2S-\_B\_ with MR-J4-\_B\_

### 3. DIFFERENCES BETWEEN MR-J2S-\_B\_ AND MR-J4-\_B\_

- Note
1. Setup software (SETUP161E) is necessary for this function.
  2. MR Configurator2 is necessary for this function.

### 3.3 Comparison of Networks

MR-J4- \_B\_ servo amplifier is connected to controllers, including a servo system controller, on the high-speed synchronous network SSCNET III/H. The servo amplifier directly receives a command from a controller to drive a servo motor.

SSCNET III/H allows higher-speed communication of 150 Mbps for both upstream and downstream traffic to be achieved with high noise resistance enabled by adoption of the SSCNET III optical cables. Large amounts of data are exchanged in real-time between the controller and the servo amplifier. Servo monitor information is stored in the upper information system and is used for control.

#### 3.3.1 Comparison of servo system network specifications

Item	MR-J2S series	MR-J4 series (Note 1)	
	SSCNET	SSCNET III	SSCNET III/H
Communication media	Metal cable	Optical fiber cable	
Communication speed	5.6Mbps	50Mbps	150Mbps
Transmission distance	Overall length: 30 m	[Standard cord inside cabinet/standard cable outside cabinet] Maximum distance between stations: 20 m Maximum overall distance: 320 m (20 m x 16 axes)	
		[Long distance cable] Maximum distance between stations: 50 m Maximum overall distance: 800 m (50 m x 16 axes)	[Long distance cable] Maximum distance between stations: 100 m Maximum overall distance: 1600 m (100 m x 16 axes)

- Note
1. When SSCNET III/H communication is used to receive a command sent for the first time from the controller in the factory setting, the operation mode is fixed to "J4 mode". To return to the factory setting or to select an arbitrary mode, change the setting with the application "MR-J4(W)-B Change mode" or "MR Mode Change".  
The application "MR-J4(W)-B Change mode" or "MR Mode Change" are available with MR Configurator2 Version 1.12N and later. When a version older than 1.12N is used, download an update version from the MITSUBISHI ELECTRIC FA Global Website.

## Part 3: Review on Replacement of MR-J2S-  \_B\_ with MR-J4-  \_B\_

### (1) Explanation of SSCNET III/H cable models

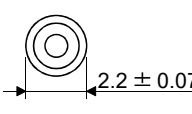

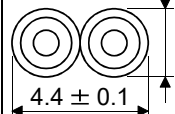

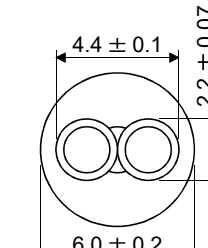

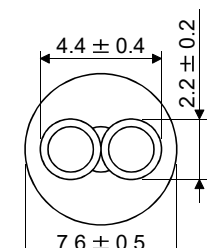

The numbers in the cable length field of the table indicate the symbol filling the underline "  " in the cable model. The cables of the lengths with the symbols are available.

Cable model	Cable length (m)											Flex life	Application/remark
	0.15	0.3	0.5	1	3	5	10	20	30	40	50		
MR-J3BUS_M	015	03	05	1	3	/	/	/	/	/	/	Standard	Using standard cord inside cabinet
MR-J3BUS_M-A	/	/	/	/	/	5	10	20	/	/	/	Standard	Using standard cable outside cabinet
MR-J3BUS_M-B (Note)	/	/	/	/	/	/	/	/	30	40	50	High flex life	Using long distance cable

Note. For cable of 30 m or shorter, contact your local sales office.

Contact Mitsubishi Electric System & Service about ultra-high flex-life cables and long distance cables longer than 50 m.

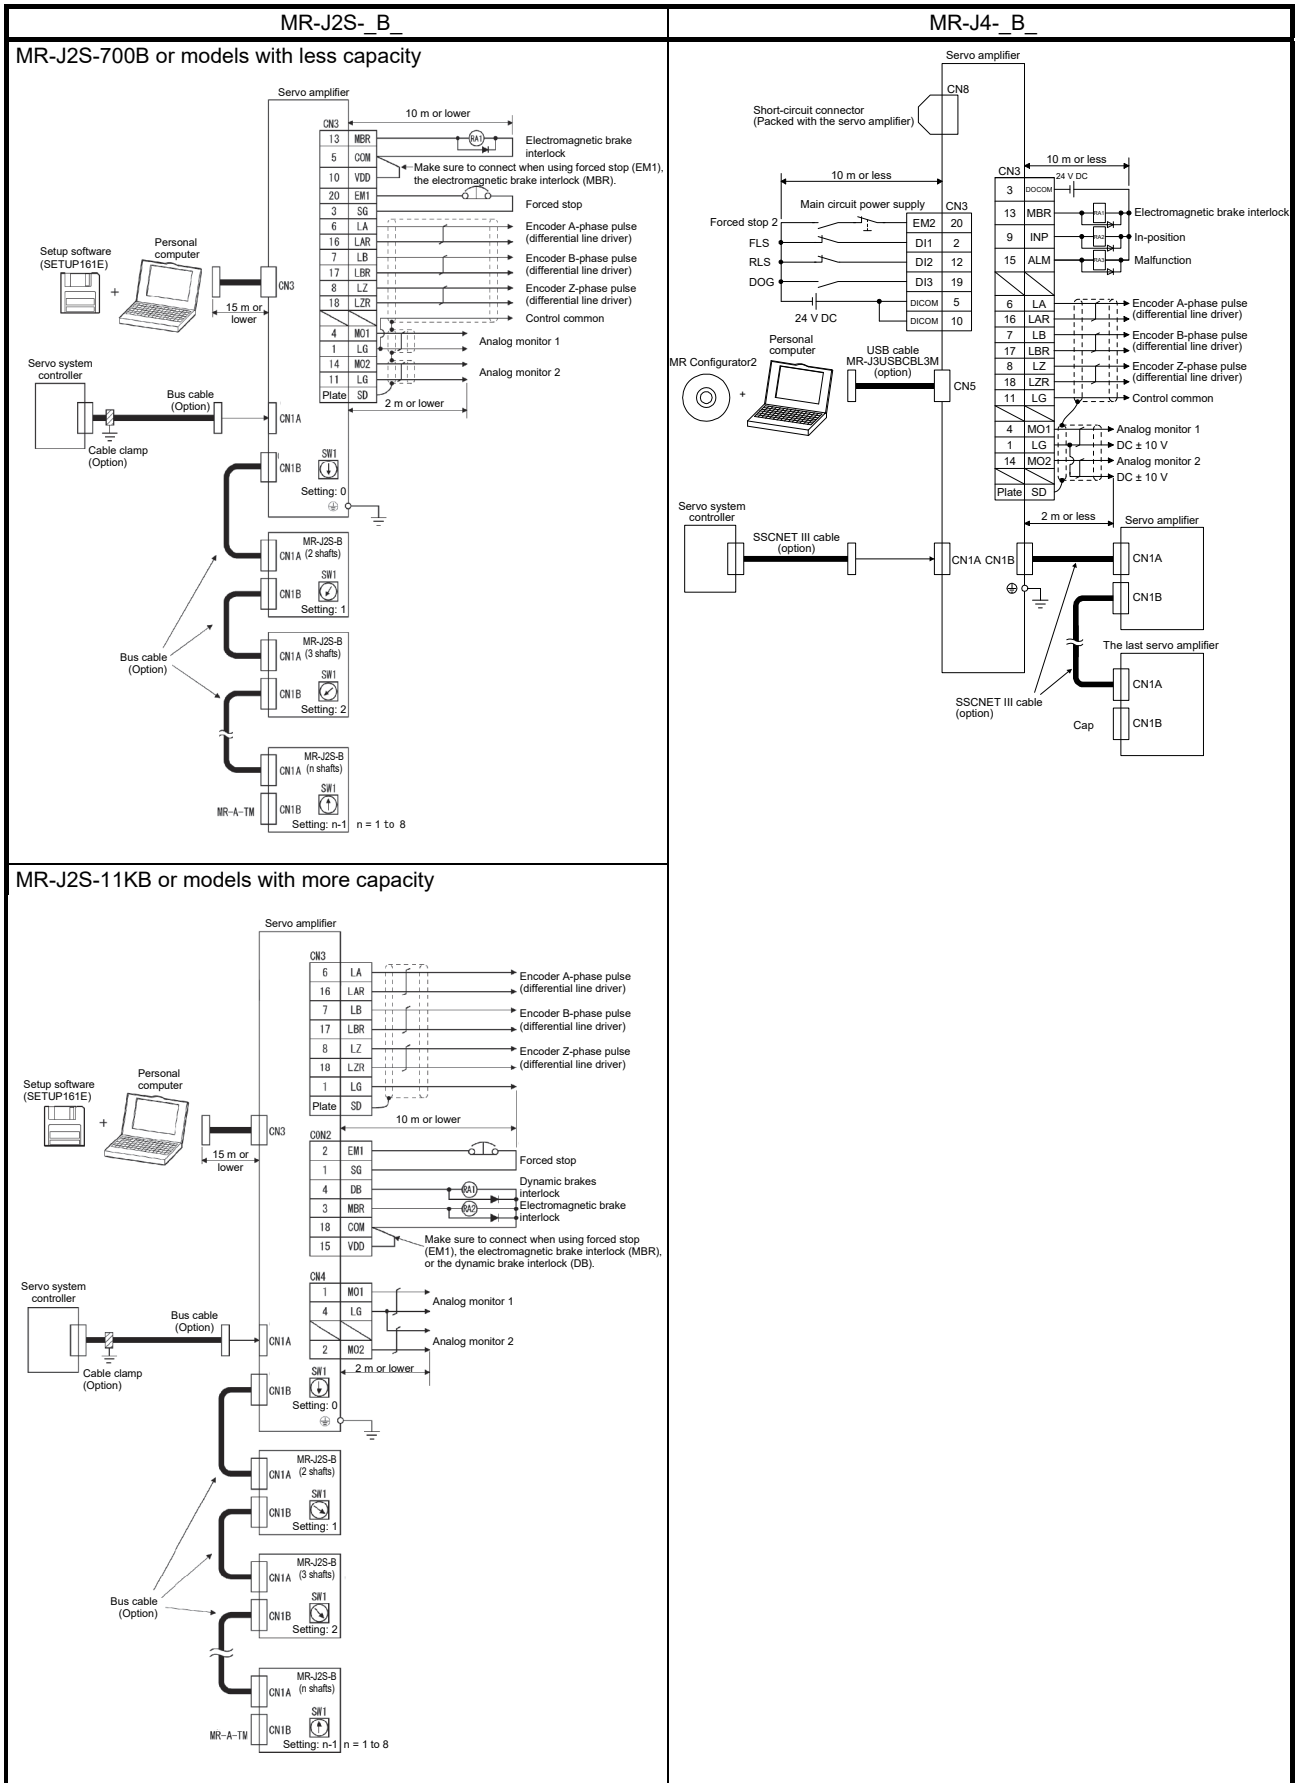

### (2) SSCNET III/H cable specifications

		Description				
SSCNET III/H cable model		MR-J3BUS_M		MR-J3BUS_M-A	MR-J3BUS_M-B	
SSCNET III/H cable length		0.15 m		0.3 m to 3 m	5 m to 20 m	30 m to 50 m
Optical cable (cord)	Minimum bend radius	25 mm			Enforced covering cable: 50 mm Cord: 25 mm	Enforced covering cable: 50 mm Cord: 30 mm
	Tension strength	70 N	140 N	420 N (Enforced covering cable)	980 N (Enforced covering cable)	
	Temperature range for use (Note)	-40 °C to 85 °C				-20 °C to 70 °C
	Atmosphere	Indoors (not exposed to direct sunlight), no solvent or oil.				
Appearance [mm]						

Note. This temperature range for use is the value for optical cable (cord) only. Temperature condition for the connector is the same as that for servo amplifier.

# Part 3: Review on Replacement of MR-J2S- B\_ with MR-J4- B\_

## 3.4 Comparison of Standard Connection Diagrams

# Part 3: Review on Replacement of MR-J2S-\_B\_ with MR-J4-\_B\_

## 3.5 List of Corresponding Connectors and Terminal Blocks

### (1) Comparison of connectors

An example of connections with the peripheral equipment is shown below. Refer to the respective Instruction Manuals for details on the signals.

## Part 3: Review on Replacement of MR-J2S- \_B\_ with MR-J4- \_B\_

### (2) List of connector and terminal block correspondence

MR-J2S- _B_		MR-J4- _B_	Precautions
(1)	Bus cable connector [CN1A]	SSCNET III/H cable connector [CN1A]	Must switch to SSCNET III/H cable (option).
(2)	Bus cable-connecting connector [CN1B]	SSCNET III/H cable connector [CN1B]	Must switch to SSCNET III/H cable (option).
(3)	Encoder connector [CN2]	Encoder connector [CN2]	Must switch to encoder cable (option) or prepare a new cable.
(4)	Communication connector [CN3]	PC connection	Must switch to USB cable (option).
		Analog monitor	
		Encoder output pulses	
(8)	Analog output connector [CN4] (Note 2)	I/O signal connector [CN3]	Prepare a new cable.
(9)	I/O signal connector [CON2] (Note 2)		
(5)	Main circuit terminal block [TE1]	Main circuit power connector [CNP1]	Must switch to the power connector (enclosed with the servo amplifier).
		Servo motor power supply	
(6)	Control circuit terminal block [TE2]	Servo motor power connector [CNP3]	
(7)	Battery connector [CON1]	Control circuit power connector [CNP2]	Prepare a new battery.
		Battery connector [CN4]	

- Note 1. When not using the STO function in MR-J4- \_B\_ , attach a short-circuit connector supplied with a servo amplifier onto CN8 (STO input signal connector).
- Note 2. These connectors are only for MR-J2S-11KB or models with more capacity.
- Note 3. The configuration of the main circuit terminal block differs depending on capacity. Refer to "Part 7: Common Reference Material".

### (3) Comparison of signals

MR-J2S- _B_ <7 kW or less>		Abbreviation (Note 1)	MR-J4- _B_	
Connector pin assignment	Connector pin No.		Connector pin No.	Connector pin assignment

Plate	SD	Plate		

- Note 1. Signals unique to MR-J4-\_B\_ are in parentheses.  
 Note 2. The factory setting for MR-J4-\_B\_ is EM2.  
 Note 3. Set with [Pr. PD07] to [Pr. PD09] for use.

## Part 3: Review on Replacement of MR-J2S- \_B\_ with MR-J4- \_B\_

---

### 3.6 Comparison of Peripheral Equipment

POINT	
●	Refer to "Part 9: Review on Replacement of Optional Peripheral Equipment".

## Part 3: Review on Replacement of MR-J2S- \_B\_ with MR-J4- \_B\_

### 3.7 Comparison of Parameters

#### Note

- Never perform extreme adjustments and changes to the parameters, otherwise the operation may become unstable.
- If fixed values are written in the digits of a parameter, do not change these values.
- Do not change parameters for manufacturer setting.
- Do not enter any setting value other than those specified for each parameter.

#### POINT

- For the parameter converter function, refer to "Part 7: Common Reference Material".
- The parameter whose symbol is preceded by \* is enabled with the following conditions:
  - \*: After setting the parameter, cycle the power or reset the controller.
  - \*\* : After setting the parameter, cycle the power.
- For details about parameter settings for replacement, refer to the MR-J4- \_B\_ (-RJ) Servo Amplifier Instruction Manual to set parameters.

#### POINT

- With MR-J4- \_B\_ , the deceleration to a stop function is enabled in the factory setting. To disable the deceleration to a stop function, set [Pr. PA04] to "0 \_ \_ \_".
- In cases of 11 kW or more, the dynamic brake interlock (DB) needs to be assigned to a device in [Pr. PD07] to [Pr. PD09].

## Part 3: Review on Replacement of MR-J2S- \_B\_ with MR-J4- \_B\_

### 3.7.1 Setting requisite parameters upon replacement

The parameters shown in this section are a minimum number of parameters that need to be set for simultaneous replacement. Depending on the settings of the currently used servo amplifier, parameters other than these may need to be set.

Parameter number	Name	Precautions
PA02	Regenerative option selection	The setting must be changed according to option model.
PA04	Function selection A-1 Servo forced stop selection	Forced stop deceleration function selection To configure the same settings as for MR-J2S- _B_ , select "Forced stop deceleration function disabled (with EM1 used)".
PA08	Gain adjustment mode selection	The setting value needs to be changed according to the auto tuning mode.
PA09	Auto tuning response	Auto tuning response setting Refer to "3.7.3 Comparison of parameter details" for the setting value of this parameter upon replacement. It is necessary to make gain adjustment again when replacing. For details on how to make gain adjustments, refer to Chapter 6 of the MR-J4- _B_ Servo Amplifier Instruction Manual. The setting value needs be changed based on the standard machine resonance frequency.
PA10	In-position range	The setting needs to be changed depending on the servo motor.
PA15	Encoder output pulse	Used to set the encoder pulses (A-phase and B-phase) output by the servo amplifier.
PA19	Parameter writing inhibit	Change the setting value as necessary.
PB06	Load to motor inertia ratio	The unit system is different. (0.1-fold→0.01-fold) Pay attention to setting value.
PB07	Model loop gain	The unit system is different. (rad/s→0.1 rad/s)
PB08	Position loop gain	The unit system is different. (rad/s→0.1 rad/s)
PB10	Speed integral compensation	The unit system is different. (ms→0.1 ms)
PB13	Machine resonance suppression filter 1	Change the setting value according to the frequency and depth.
PB14	Notch shape selection 1	
PB15	Machine resonance suppression filter 2	
PB16	Notch shape selection 2	
PB29	Load to motor inertia ratio after gain switching	The unit system is different. (0.1-fold→0.01-fold) Pay attention to setting value.
PB30	Position loop gain after gain switching	It is necessary to convert the ratio to a value to change the setting value.
PB31	Speed loop gain after gain switching	It is necessary to convert the ratio to a value to change the setting value.
PB32	Speed integral compensation after gain switching	It is necessary to convert the ratio to a value to change the setting value.
PC01	Error excessive alarm level	The unit system is different. MR-J2S- _B_ : 0.025 rev. unit; MR-J4- _B_ : 1/0.1/0.01/0.001 rev. unit selectable
PC06	Function selection C-3 Error excessive alarm level unit selection	
PC09	Analog monitor 1 output	The setting value must be changed according to monitor output data. "Maximum speed" and "Maximum torque" differ depending on the servo motor. Set according to the servo motor.
PC10	Analog monitor 2 output	
PC11	Analog monitor 1 offset	Depends on hardware. It is necessary to change the setting value.
PC12	Analog monitor 2 offset	Depends on hardware. It is necessary to change the setting value.
PD12	Function selection D-1	This is used to select enabled or disabled for the thermistor of the servo motor. : When using (HA-LFS series) servo motors that have thermal terminals and not connecting thermal signals to the MR-J4 servo amplifier, set this parameter to "1 _ _ _h (Disabled)". The overheat protection of a servo motor is not enabled. Configure a protective circuit.

## Part 3: Review on Replacement of MR-J2S- \_B\_ with MR-J4- \_B\_

### 3.7.2 Parameter comparison list

POINT

19	Feed forward gain Set the feed forward gain. When the setting is 100%, the droop pulses during operation at constant speed are nearly zero. However, sudden acceleration/deceleration will increase the overshoot. As a standard, when setting the feed forward gain as 100%, set 1 s or more as the acceleration/deceleration time constant up to the rated speed.	0	PB04	Feed forward gain Set the feed forward gain. If 100% is set and constant-speed operation is implemented, pulse droop will be almost zero. However, sudden acceleration/deceleration will increase the overshoot. As a standard, when setting the feed forward gain as 100%, set 1 s or more as the acceleration time constant up to the rated speed.	0																																																																																							
20	In-position range Set the range of droop pulses occurred when outputting INP (positioning completion) to a controller. Set by the feedback pulse unit ([Pr. 6]). For example, when wanting to set ±10 μm in a state of direct connection to the ball screw, a lead wire length of 10 mm, and a feedback pulse 8192 pulses/rev ([Pr. 6]: 1), set "8", as shown in the equation below. $\frac{10 \times 10^{-6}}{10 \times 10^{-3}} \times 8192 = 8.192 \approx 8$	100	PA10	In-position range Used to set an in-position range per command pulse unit.	1600																																																																																							
21	Electromagnetic brake sequence output Used to set the delay time (Tb) between MBR (Electromagnetic brake interlock) OFF and base circuit shut-off.	0	PC02	Electromagnetic brake sequence output Used to set the delay time between MBR (Electromagnetic brake interlock) OFF and base circuit shut-off.	0

Setting digit	Explanation	Initial value													
_ _ X _	Encoder output pulse setting selection 0: Output pulse setting (When "_ 1 0 _" is set for this parameter, [AL.37 parameter error] occurs.) 1: Dividing ratio setting 3: A/B-phase pulse electronic gear setting 4: A/B-phase pulse through output setting The "4" setting is available only when using the A/B/Z-phase differential output linear encoder. In this case, the "encoder output pulse phase selection (_ _ X)" will be disabled. [AL.37 parameter error] occurs when another encoder is connected. If a standard control mode "( _ 0 _)" is selected in [Pr. PA01 operation mode], [AL.37 parameter error] occurs.	0h													
34	<p>PI-PID switching position droop Set the amount of position droop (number of pulses) when the PI control is switched to PID control. When setting [Pr. 32] to "0001", this parameter is enabled.</p>	0	<p>No corresponding parameter</p>												
36	<p>Speed differential compensation Used to set the differential compensation value.</p>	980	PB11	<p>Speed differential compensation Used to set the differential compensation. This parameter is enabled when setting the "PI-PID switching control selection" of [Pr. PB24] to "continuous PID control enabled (_ 3 _)".</p>	980										
38	<p>Encoder output pulses Used to set the encoder pulses (A-phase and B-phase) output by the servo amplifier. Set the value 4 times greater than the A-phase and B-phase pulses. [Pr. 33] can be used to choose the output pulse setting or output dividing ratio. The number of A-phase and B-phase pulses actually output is 1/4 times greater than the preset number of pulses. The maximum output frequency is 1.3 Mpulses/s (after multiplication by 4). Use this parameter within this range.</p> <ul style="list-style-type: none"> <li>For output pulse designation Set [Pr. 33] to "_ 0 _" (initial value). Set the number of pulses per servo motor revolution. Output pulse = setting value [pulse/rev]. For instance, when "5600" is set, the actual output A- and B-phase pulses are as follows. Phase A/phase B output pulse = <math>\frac{5600}{4} = 1400</math> [pulses]</li> <li>For output division ratio setting Set [Pr. 33] to "_ 1 _". The number of pulses per servo motor revolution is divided by the set value. Output pulse = <math>\frac{\text{Encoder resolution per servo motor revolution}}{\text{Setting value}} = \text{[pulse/rev]}</math> For instance, when "8" is set, the actual output A- and B-phase pulses are as follows. Phase A/phase B output pulse = <math>\frac{131072}{8} \times \frac{1}{4} = 4096</math> [pulses]</li> </ul>	4000	PA15	<p>Encoder output pulse Set for the output pulse count, the dividing ratio, or the electronic gear ratio per rotation of the encoder output pulses output by the servo amplifier. (After multiplication of 4) Set the numerator of the electronic gear when "Phase A/phase B pulse electronic gear setting (_ 3 _)" is selected in "Encoder output pulse setting selection" of [Pr. PC03]. The maximum output frequency is 4.6 Mpulses/s. Set to within this range.</p>	4000

### 3.8 Important Points for Replacement

- (1) When the intermediate connection axis network is OFF, the network of the subsequent axis is not connected

Even if alarm has occurred, do not switch off the control circuit power supply. When the control circuit power supply has been switched off, optical module does not operate, and optical transmission of SSCNET III/H communication is interrupted. Therefore, the next axis servo amplifier displays "AA" at the indicator and turns into base circuit shut-off. The servo motor stops with starting dynamic brake.

# Part 4: Review on Replacement of MR-J2S-CP/CL\_ with MR-J4-A-RJ

## Part 4: Review on Replacement of MR-J2S-CP/CL\_ with MR-J4-A-RJ

### 1. SUMMARY

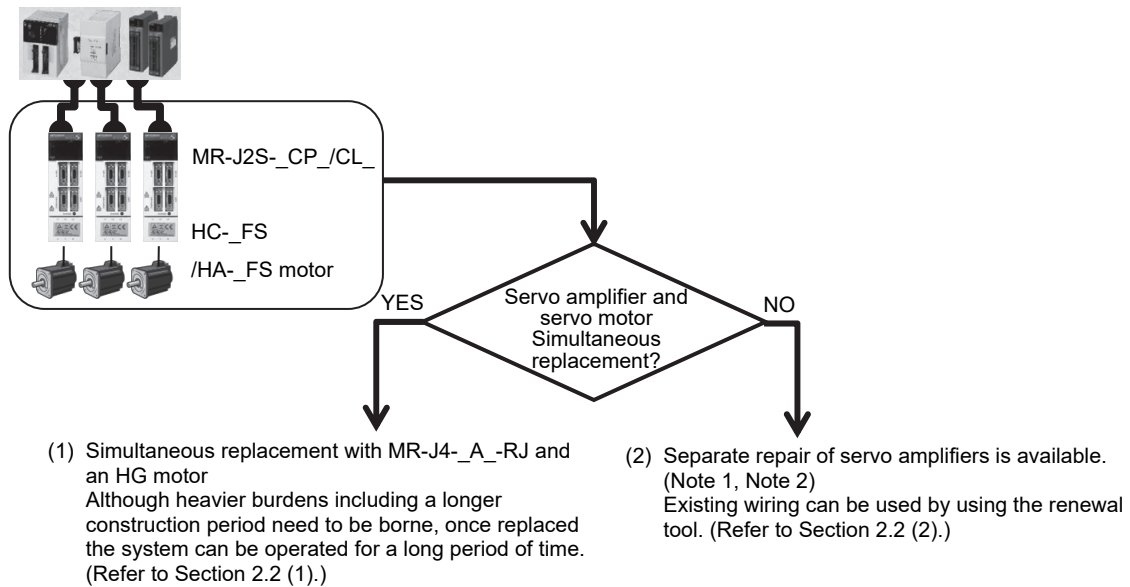

This section describes the changes to be made when a system using MR-J2S-CP/CL\_ is replaced with a system using MR-J4-A-RJ.

### 2. CASE STUDY ON REPLACEMENT OF MR-J2S-CP/CL\_

#### 2.1 Consideration of Replacement Method

**POINT**

●MR-J2S-CP/CL\_ cannot drive an HG motor. When a servo motor is replaced with an HG motor, servo amplifier also needs to be replaced with MR-J4-A-RJ + HG simultaneously.

- Note 1. Separate repair means replacement.  
2. No "renewal tool" is available for MR-J2S-CL\_.

#### 2.2 Replacement Method

##### (1) Simultaneous replacement with MR-J4-A-RJ and an HG motor

The currently used connectors or cables need to be replaced. The parameters of the existing system can be transferred with the parameter converter function of MR Configurator2. (Refer to "Part 7: Common Reference Material".)

## Part 4: Review on Replacement of MR-J2S-CP/CL\_ with MR-J4-A-RJ

(2) Separate repair of servo amplifier/servo motor

POINT			
<ul style="list-style-type: none"> <li>● MR-J2S-CP/CL_ cannot drive an HG motor. When a servo motor is replaced with an HG motor, servo amplifier also needs to be replaced with MR-J4-A-RJ + HG simultaneously.</li> <li>● If the existing system is any of the combinations in the following table, it is recommended to replace both the servo amplifier and servo motor with an MR-J4-A-RJ and HG motor at the same time. When an HG motor is adopted, the capacity of the servo amplifier needs to be changed. (Consider replacement, referring to "torque characteristics" described in "Part 8: Replacement of Motor".)</li> </ul>			
Existing device models		Replacement models for simultaneous replacement (example)	
Servo motor	Servo amplifier	Servo motor	Servo amplifier
HC-LFS52	MR-J2S-60CP/CL	HG-JR73	MR-J4-70A-RJ

HC-RFS203(B)G2 1/_	MR-J2S-350CP/CL	HG-SR202(B)G7 1/_	MR-J4-200A-RJ
HC-RFS353(B)G2 1/_	MR-J2S-500CP/CL	HG-SR352(B)G7 1/_	MR-J4-350A-RJ
HC-RFS103(B)G5 1/_	MR-J2S-200CP/CL	HG-SR102(B)G5 1/_	MR-J4-100A-RJ
HC-RFS203(B)G5 1/_	MR-J2S-350CP/CL	HG-SR202(B)G5 1/_	MR-J4-200A-RJ
HC-RFS353(B)G5 1/_	MR-J2S-500CP/CL	HG-SR352(B)G5 1/_	MR-J4-350A-RJ
HC-RFS103(B)G7 1/_	MR-J2S-200CP/CL	HG-SR102(B)G7 1/_	MR-J4-100A-RJ
HC-RFS203(B)G7 1/_	MR-J2S-350CP/CL	HG-SR202(B)G7 1/_	MR-J4-200A-RJ
HC-RFS353(B)G7 1/_	MR-J2S-500CP/CL	HG-SR352(B)G7 1/_	MR-J4-350A-RJ

After replacement, an HC-FS /HA-FS motor can be driven by MR-J4-A-RJ. Refer to "Part 7: Common Reference Material" for target motors.

Use the renewal tool when replacing a servo amplifier with MR-J4-A-RJ without replacing the currently used servo motor and existing cables. (Refer to "[Appendix 2] Introduction to Renewal Tool".)

The parameters of the existing system can be transferred with the parameter converter function of MR Configurator2. (Refer to "Part 7: Common Reference Material".)

## 3. DIFFERENCES

### 3.1 Function Comparison Table

POINT
● Functions with difference are shown with shading.

#### (1) Comparison between MR-J2S- \_CP\_/CL\_ and MR-J4- \_A\_-RJ

Item	MR-J2S- _CP_/CL_ series (7 kW or less, 100 V/200 V class)	MR-J4- _A_-RJ series (7 kW or less, 100 V/200 V class)
1 Capacity range	(100 V class) 0.1 kW to 0.4 kW (200 V class) 0.1 kW to 7 kW	(100 V class) 0.1 kW to 0.4 kW (200 V class) 0.1 kW to 7 kW
2 Internal regenerative resistor	Built-in (0.2 kW to 7 kW)	Built-in (0.2 kW to 7 kW)
3 Dynamic brake	Built-in (0.1 kW to 7 kW)	Built-in (0.1 kW to 7 kW) Coasting distance may be different.
4 Control circuit power	(100 V Class) 1-phase 100 V AC to 120 V AC (200 V Class) 1-phase 200 V AC to 230 V AC	(100 V Class) 1-phase 100 V AC to 120 V AC (200 V Class) 1-phase 200 V AC to 240 V AC
5 Main circuit power	(100 V Class) 1-phase 100 V AC to 120 V AC (200 V Class) 1-phase 230 V AC/3-phase 200 V AC to 230 V AC (to 750 W) 3-phase 200 V AC to 230 V AC (1 kW to 7 kW)	(100 V Class) 1-phase 100 V AC to 120 V AC (200 V Class) 1-phase/3-phase 200 V AC to 240 V AC (to 750 W) 3-phase 200 V AC to 240 V AC (1 kW to 7 kW)
6 24 V DC power	Built-in	External supply required
7 Auto Tuning	Real-time auto tuning: 15 steps	Real-time auto tuning: 40 steps One-touch tuning
8 Control mode	(CP) Built-in positioning function (CL) Built-in program operation function	(CP) Built-in positioning function Built-in program operation function Position control mode (pulse command) Speed control mode (analog command) Torque control mode (analog command)
9 Manual pulse generator maximum input pulse	Open collector 200 kpulses/s	Open collector 200 kpulses/s
10 The number of DIO points (excluding EM1)	DI: 8 points, DO: 5 points, DI/DO combination: 1 point	DI: 11 points, DO: 8 points
11 Encoder pulse output	ABZ-phase (differential line driver) Z-phase (open-collector)	ABZ-phase (differential line driver) Z-phase (open-collector)
12 DIO interface	Input: Sink/source Output: Sink	Input: Sink/source Output: Sink/source
13 Analog input/output	(Input) 2ch 10-bit torque limit, 10-bit override (Output) 10-bit or equivalent x 2ch	(Input) 2 ch 10-bit torque limit, 10-bit override or equivalent (Output) 10-bit or equivalent x 2ch
14 The number of internal speed commands	7 points	7 points
15 Parameter setting method	Setup software (SETUP161E) Push-button	MR Configurator2 Push-button parameter unit
16 Setup software communication	RS-232C	USB
17 Servo motor (Encoder resolution)	HC- FS series (17-bit ABS) HA- FS series (17-bit ABS)	HG series (22-bit ABS)
18 Motor maximum torque	HC-KFS 300%	HG-KR 350%(models with a gear: 300%)
	HC-MFS 300%	HG-MR 300%
	HC-SFS 300%	HG-SR 300%
	HA-LFS 250%, 300%	HG-JR 300%
19 button	Four buttons	Four buttons
20 LED display	7-segment 5-digit	7-segment 5-digit
21 Advanced vibration suppression control	Unprovided	Provided
22 Adaptive filter	Provided (Adaptive vibration suppression control)	Provided (Adaptive filter II with improved functions)
23 Notch filter	Provided (2 pcs.)	Provided (5 pcs.)
24 Tough drive	Unprovided	Provided
25 Drive recorder	Unprovided	Provided
26 Forced stop	EM1 (DB stop)	EM1 (DB stop)/EM2 (deceleration stop) optional
27 Point table No.	(CP) up to 31	up to 255
28 Program No.	(CL) up to 16 programs (120 steps)	up to 256 programs (640 steps)
29 Position data unit	mm	mm/degree/inch/pulse
30 Program language Command	TIM(Dwell)Unit × 10 ms	TIM(Dwell)Unit ms

## Part 4: Review on Replacement of MR-J2S- CP /CL\_ with MR-J4- A\_-RJ

### (2) Positioning function comparison

Item		Model			
		MR-J2S- CP_	MR-J2S- CL_	MR-J4- A_-RJ

## Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

Item		Type		
		MR-J2S- _CP_	MR-J2S- _CL_	MR-J4- _A_-RJ
Positioning function	Absolute position detection	○	○	○
	Backlash compensation	○	○	○
	Overtravel prevention with external limit switch	○	○	○
	Software stroke limit	○	○	○
	Override with analog input	○	○	○ (CP/CL)
	Teaching function	○	×	○
	General purpose register	\	○ 4 (RAM) 4 (EEPROM)	○ 4 (RAM) 4 (EEPROM)
	Roll feed display	×	×	○
	Temporary stop/restart	○	○	○ (CP/CL)
	Mark detection function (Current position latch function)	×	×	○ (CP/CL)

- Note
- The symbols in the type field of this table are as follows:  
 CP : Point table method, CL : Program method  
 ○: Supported, × : Not supported, \: No function
  - Units can be switched using parameters.

# Part 4: Review on Replacement of MR-J2S-CP/CL\_ with MR-J4-A-RJ

## 3.2 Function List

### (1) Function List

function	Description	Control mode (Note)	
		C P	C L
Positioning mode (Point table method)	Select the predefined 255 point tables, and operate them according to the setting values. Use external input signals or communication functions to select point tables.	○	×
Positioning mode (Program method)	Select one from the predefined 256 programs, and operate it according to the program content. Use external input signals or communication functions to select programs.	×	○
Roll feed display function	Set the status display of commanded position and current position at the start to "0", and perform positioning for the defined travel distance.	○	○
Mark detection function (Current position latch function)	Mark detection signal is turned on, the current position is latched. Latched data can be read using a communication command.	○	○
Manual home position return	Dog type, count type, data set type, stopper type, home position ignorance, dog type rear end reference, count type front end reference, dog cradle type, dog type last Z-phase reference, Dogless Z-phase reference	○	○
High-resolution encoder	A high-resolution encoder capable of 4194304 pulses/rev is used as the encoder for the rotary servo motor compatible with the MELSERVO-J4 series.	○	○
Absolute position detection system	By setting the home position once, it will be unnecessary to return to the home position each time the power is turned on.	○	○
Gain Switching Function	Gain can be switched during rotation and when stopped, and also when using the input device during the operation.	○	○
Advanced vibration suppression control II	This function controls residual vibration or vibration at the end of the arm.	○	○
Shaft resonance suppression filter	When a load is put on the servo motor shaft, a high-frequency machine vibration may be generated due to resonance caused by shaft torsion while the servo motor is being driven. The shaft resonance suppression filter is the filter that controls this vibration.	○	○
Adaptive filter II	With this function, the servo amplifier detects machine resonance and sets filter properties automatically, and then controls the vibration of the machine system.	○	○
Low-pass filter	When a servo system response is raised, it suppresses the high-frequency resonance generated.	○	○
Machine analyzer function	The frequency properties of the machine system are analyzed by only connecting the servo amplifier and the personal computer where MR Configurator2 is installed. MR Configurator2 is necessary for this function.	○	○
Robust filter	If it is not possible to raise the response because the load to motor inertia ratio is high due to the roll feed shaft, etc., the disturbance response can be improved.	○	○
Slight Vibration Suppression Control	A vibration of $\pm 1$ pulse is suppressed when the servo motor stops.	○	○
Electronic gear	Position command can be set to 1/864-33935 times.	○	○
Auto Tuning	Automatically adjusts the optimum servo gain even if the load applied on the servo motor shaft changes.	○	○
Brake unit	Used when there is insufficient regenerative ability in the regenerative option. 5 kW or higher servo amplifier can be used.	○	○
Power regeneration converter	Used when there is insufficient regenerative ability in the regenerative option. 5 kW or higher servo amplifier can be used.	○	○
Regenerative options	Used when the generated regenerative power is high and there is insufficient regenerative ability in the internal regenerative resistor of servo amplifier.	○	○
Alarm History Clear	Deletes the alarm history.	○	○
Input signal selection (device settings)	Input devices such as ST1 (forward rotation start), ST2 (reverse rotation start), and SON (servo-on) can be assigned to a specific CN1 connector pin.	○	○
Output signal selection (device settings)	Output devices such as MBR (electromagnetic brake interlock) can be assigned to a specific CN1 connector pin.	○	○
Output signal (DO) forced output	Output signals can be turned on/off forcibly regardless of the status of the servo. Use for output signal wiring checks, etc.	○	○
Command pulse selection	Phase A/phase B pulse train	○	○
Torque limit	The servo motor torque can be limited.	○	○
Status display	The servo status is displayed on the 5-digit, 7-segment LED indicator.	○	○

## Part 4: Review on Replacement of MR-J2S- CP /CL\_ with MR-J4- A\_-RJ

function	Description	Control mode (Note)	
		C P	C L
External I/O signal display	The on/off statuses of external I/O signals are displayed on the display.	○	○
VC automatic offset	If the motor does not stop even when the VC (analog speed command) or VLA (analog speed limit) is 0 V, the voltage is automatically offset to stop it.	○	○
Alarm code output	When an alarm occurs, an alarm number is output in 3-bit code.	○	○
Test operation mode	Jog operation, positioning operation, motor-less operation, DO forced output, and program operation. When performing positioning operation, program operation, and single-step feed, MR Configurator2 is required.	○	○
Analog monitor output	The voltage is output in real time for the servo status.	○	○
MR Configurator2	Parameter setting, test operation, monitoring, etc., can be performed using a personal computer.	○	○
Linear servo system	Linear servo motor and linear encoder can be used to construct the linear servo system.	○	○
Direct drive Servo system	Direct drive servo system that drives direct drive motors can be constructed.	○	○
Fully closed loop system	Load side encoder can be used to construct the fully closed loop system.	○	○
One-touch tuning	Gain adjustment of the servo amplifier is possible only by operation of the push button or by one click of the button on MR Configurator2.	○	○
SEMI-F47 function	By complying with the SEMI-F47 standard, even when an instantaneous power failure occurs during the operation, the electrical energy charged in the capacitor can be used to avoid the occurrence of [AL.10 Undervoltage]	○	○
Tough drive function	It is usually possible to continue operation so that the device does not stop even when alarm is about to occur. There are two types of tough drive functions, vibration tough drive and instantaneous power failure tough drive.	○	○
Drive recorder function	By always monitoring the servo status, this function allows fixed time recording of status transitions before and after an alarm occurs. The recorded data can be checked by clicking the wave-form display button on the drive recorder screen of MR Configurator2. However, in the following statuses, the drive recorder will not operate. 1. When the MR Configurator2 graph function is in use. 2. When the machine analyzer function is in use. 3. When [Pr. PF21] is set to "-1".	○	○
STO function	The STO functions are available as IEC/EN 61800-5-2 safety functions. A device safety system can be easily constructed.	○	○
Servo amplifier life diagnosis function	The accumulated energization time and the number of times the burst relay is turned on and off can be checked. This acts as a measure of time if servo amplifier parts such as capacitor and relay need to be replaced according to their life expectancies before malfunctioning. MR Configurator2 is necessary for this function.	○	○
Power monitoring function	The power running power and regenerative power are calculated from data in the servo amplifier, including speed and current. Power consumption, etc., can be displayed in MR Configurator2.	○	○
Machine diagnosis function	Faulty machine parts such as ball screws and bearings can be detected by presuming friction and vibration elements of the device actuator from data in the servo amplifier. MR Configurator2 is necessary for this function.	○	○
Limit switch	Forward rotation stroke end (LSP) and reverse rotation stroke end (LSN) can be used to limit the travel distance of servo motor.	○	○
S-pattern acceleration/deceleration	Smooth acceleration/deceleration is possible. Set the S-pattern acceleration/deceleration time constants in [Pr. PC03]. Compared with linear acceleration/deceleration time, the acceleration/deceleration time will be longer by the magnitude of S-pattern acceleration/deceleration time constant regardless of commanded speed.	○	○
Software limit	A parameter can be used to limit the travel distance based on addresses. Use a parameter to set a function equivalent to the limit switch.	○	○
Analog override	Limit the servo motor speed with analog input. The setting speed can be changed within the range of 0 to 200%.	○	○
Teaching function	After moving to the target location by JOG operation or manual pulse generator operation, the position data can be retrieved by turning on the teach (TCH) or "set" key on the controller.	○	×

Note. CP: positioning mode (point table method), CL: positioning mode (program method)

# Part 4: Review on Replacement of MR-J2S-CP/CL with MR-J4-A-RJ

## 3.3 Comparison of Standard Connection Diagrams

### (1) Point table method (MR-J2S-CP\_)

#### POINT

- Allocate the following output devices to pin CN1-22, pin CN1-23, and pin CN1-25 with [Pr. PD23], [Pr. PD24] and [Pr. PD26].  
 CN1-22: CPO (Rough match)  
 CN1-23: ZP (Home position return completion)  
 CN1-25: MEND (Travel completion)

# Part 4: Review on Replacement of MR-J2S-CP/CL\_ with MR-J4-A-RJ

## (2) Program method (MR-J2S-CL\_)

**POINT**

- Allocate the following output devices to pin CN1-22, pin CN1-23, and pin CN1-25 with [Pr. PD23], [Pr. PD24] and [Pr. PD26].

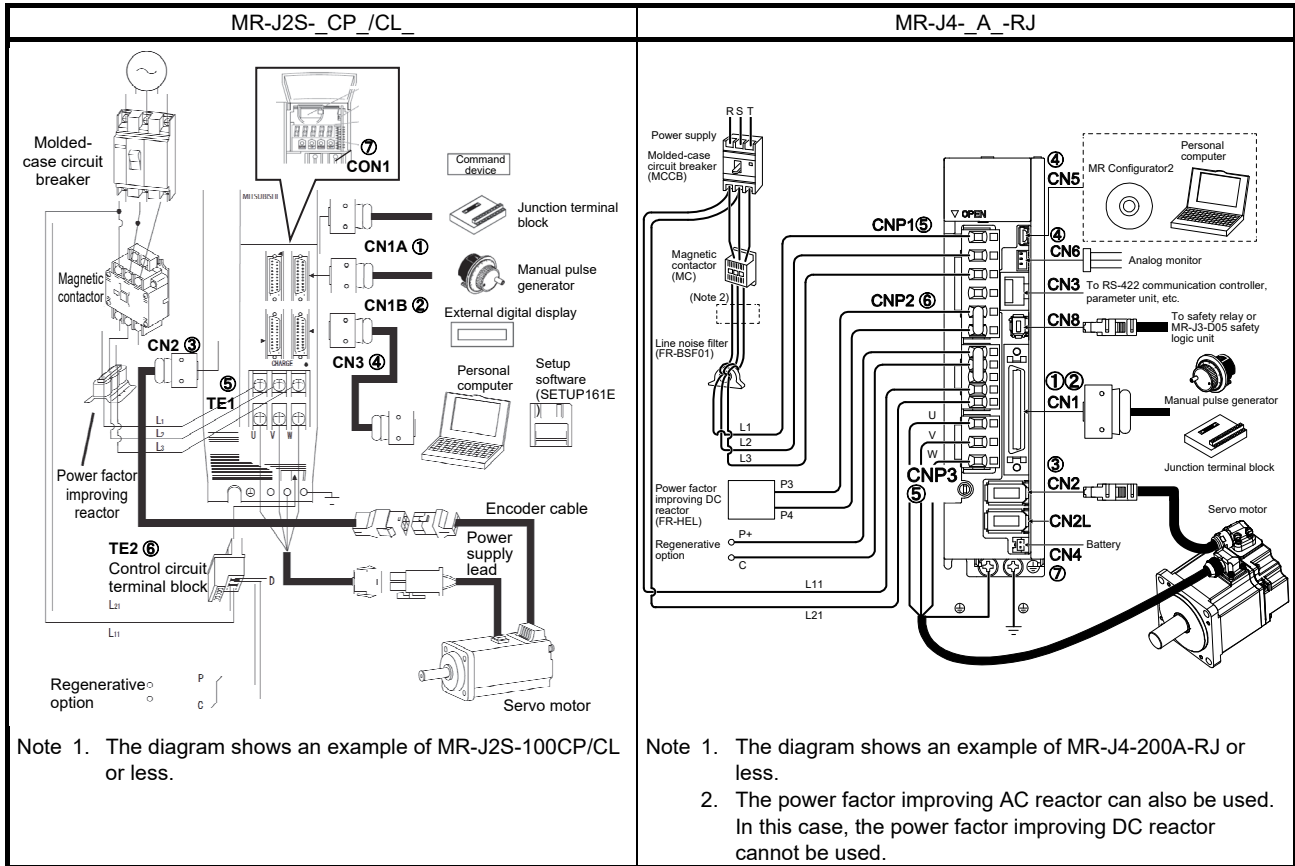

CN1-22: CPO (Rough match)  
 CN1-23: ZP (Home position return completion)  
 CN1-25: MEND (Travel completion)

# Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

## 3.4 List of Corresponding Connectors and Terminal Blocks

### (1) Connector comparison table

An example of connections with the peripheral equipment is shown below. For details on signals, refer to each servo amplifier instruction manual.

### (2) List of connector and terminal block correspondence

MR-J2S- _CP_/CL_		MR-J4- _A_-RJ	Precautions
①	I/O signal connector [CN1A]	I/O signal connector [CN1]	Prepare a new cable.
②	I/O signal connector [CN1B]		
③	Encoder connector [CN2]	Encoder connector [CN2]	Must switch to encoder cable (option) or prepare a new cable.
④	Communication connector [CN3]	PC connection (Note 1)	Must switch to USB cable (option). (Note)
		Analog monitor	
⑤	Main circuit terminal block [TE1]	Input power supply	Must switch to the power connector (enclosed with the servo amplifier).
		Servo motor power supply	
⑥	Control circuit terminal block [TE2]	Control circuit power connector [CNP2]	
⑦	Battery connector [CON1]	Battery connector [CN4]	Prepare a new battery.

Note. When using the multi-dropped communication, connect to "CN3" in "MR-J4- \_A\_-RJ".

When not using the STO function in MR-J4- \_A\_-RJ, attach the short-circuit connector supplied with the servo amplifier to CN8 (STO input signal connector).

The configuration of the main circuit terminal block differs depending on the capacity. Refer to "Part 7: Common Reference Material".

# Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

## (3) Comparison of signals

	CN3-20	P5(P5D)	CN3-2	
	CN3-2	RXD	-	
	CN3-10	TRE	-	
	CN3-12	TXD	-	

Note. Signal abbreviations in parentheses are for MR-J4-A-RJ.

### 3.5 Comparison of Peripheral Equipment

POINT
● Refer to "Part 9: Review on Replacement of Optional Peripheral Equipment".

## Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

### 3.6 Comparison of Parameters

**CAUTION**

- Never perform extreme adjustments and changes to the parameters, otherwise the operation may become unstable.
- If fixed values are written in the digits of a parameter, do not change these values.
- Do not change parameters for manufacturer setting.
- Do not enter any setting value other than those specified for each parameter.

POINT
<ul style="list-style-type: none"> <li>● For the parameter converter function, refer to "Part 7: Common Reference Material".</li> <li>● To enable a parameter whose abbreviation is preceded by *, turn the power OFF and then ON after setting the parameter.</li> <li>● For details about parameter settings for replacement, refer to the MR-J4- _A_-RJ Servo Amplifier Instruction Manual (POSITIONING MODE).</li> <li>● With MR-J4- _A_-RJ, the deceleration to a stop function is enabled by the factory setting. To disable the deceleration to a stop function, set [Pr. PA04] to "0 _ _ _".</li> <li>● Wiring of the CN1-42 pin is required for the MR-J4- _A_-RJ regardless of the setting value of [Pr. PA04: Forced stop deceleration function selection]. Refer to "3.3 List of Corresponding Connectors and Terminal Blocks" for details regarding wiring.</li> </ul>

#### 3.6.1 Setting requisite parameters upon replacement

The parameters shown in this section are a minimum number of parameters that need to be set for replacement. Depending on the settings of the currently used servo amplifier, parameters other than these may need to be set.

##### (1) Common when replacing MR-J2S- \_CP\_/MR-J2S- \_CL\_

###### (a) Simultaneous replacement with MR-J4- \_A\_-RJ and an HG motor

Parameter number	Name	Initial value	Setting value	Description
PA04	Function selection A-1	2 0 0 0h	0 0 0 0h	Forced stop deceleration function selection To configure the same settings as for MR-J2S- _CP_/MR-J2S- _CL_, select "Forced stop deceleration function disabled (EM1)".
PA06	Electronic gear numerator (Commanded pulse multiplication numerator)	1	8 (Note)	When using an electronic gear, it is necessary to change the setting value. Set the electronic gear ratio of an existing servo amplifier when simultaneously replacing with MR-J4- _A_-RJ and an HG motor. When a geared servo motor is replaced, the actual reduction ratio may differ before and after the replacement. If the ratio differs after the replacement, set the values considering the actual reduction ratio.
PA07	Electronic gear denominator (Commanded pulse multiplication denominator)	1	1 (Note)	
PA21	Function selection A-3	0 0 0 1h	3 0 0 1h	Electronic gear selection Select "J2S electronic gear setting value compatibility mode" to continue using the electronic gear ratio set in MR-J2S- _CP_/MR-J2S- _CL_.
PA09	Auto tuning response	16	8	Auto tuning response setting Enter this setting value for replacement, referring to "3.6.3 Comparison of parameter details". It is necessary to make gain adjustment again when replacing. For details about gain adjustment, refer to "MR-J2S- _CP_ [Pr. 3] (MR-J4- _A_ [Pr. PA09])" in Section 3.6.3.

Note. The example value shown is for when the electronic gear ratio of an existing servo amplifier is set as "8/1".

## Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

(b) When continuing to use the HC- \_FS/HA- \_FS motor:

Parameter number	Name	Initial value	Setting value	Description
PA04	Function selection A-1	2 0 0 0h	0 0 0 0h	Forced stop deceleration function selection To configure the same settings as for MR-J2S- _CP_/MR-J2S- _CL_, select "Forced stop deceleration function disabled (EM1)".
PA06	Electronic gear numerator (Commanded pulse multiplication numerator)	1	8 (Note)	When using an electronic gear, it is necessary to change the setting value. Set the electronic gear ratio of an existing servo amplifier.
PA07	Electronic gear denominator (Commanded pulse multiplication denominator)	1	1 (Note)	When a geared servo motor is replaced, the actual reduction ratio may differ before and after the replacement. If the ratio differs after the replacement, set the values considering the actual reduction ratio.
PA21	Function selection A-3	0 0 0 1h	0 0 0 1h	Electronic gear selection Use with the initial value as is.
PA09	Auto tuning response	16	8	Auto tuning response setting Enter this setting value for replacement, referring to "3.6.3 Comparison of parameter details". It is necessary to make gain adjustment again when replacing. For details about gain adjustment, refer to "MR-J2S- _CP_ [Pr. 3] (MR-J4- _A_ [Pr. PA09])" in Section 3.6.3.
PD30	Function selection D-1	0 0 0 0h	1 _ _ _h	This is used to select enabled or disabled for the thermistor of the servo motor. : When using (HA-LFS series) servo motors that have thermal terminals and not connecting thermal signals to the MR-J4 servo amplifier, set this parameter to "1 _ _ _h (Disabled)". The overheat protection of a servo motor is not enabled. Configure a protective circuit.

Note. The example value shown is for when the electronic gear ratio of an existing servo amplifier is set as "8/1".

(2) When replacing MR-J2S- \_CP\_

Parameter number	Name	Initial value	Setting value	Description
PA01	Operation mode	1 0 0 0h	_ _ _ 6h	Select the servo amplifier control mode. Select the positioning mode (point table method).

(3) When replacing MR-J2S- \_CL\_

Parameter number	Name	Initial value	Setting value	Description
PA01	Operation mode	1 0 0 0h	_ _ _ 7h	Select the servo amplifier control mode. Select the positioning mode (program method).

# Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

## 3.6.2 Parameter comparison list

POINT
<ul style="list-style-type: none"> <li>● Manufacturer setting parameters are not described here.</li> <li>● The parameters with [CP] can be used only for MR-J2S- _CP_, while the parameters with [CL] can be used only for MR-J2S- _CL_. The parameters without [CP] or [CL] are the parameters that can be used for both MR-J2S- _CP_ and MR-J2S- _CL_.</li> </ul>

Parameters for MR-J2S- _CP_ or MR-J2S- _CL_					MR-J4- _A_-RJ parameters							
No.	Abbreviation	Parameter name		Initial value	Customer setting value	No.	Abbreviation	Parameter name		Initial value	Customer setting value

Setting digit	Function															
---x (HEX)	---x (BIN): DOG (Proximity dog) polarity selection 0: Turn OFF for detection 1: Turn ON for detection															
9	Home position return speed Set the servo motor speed when returning to the home position.	500	500	PT05	Home position return speed Set the servo motor speed when returning to the home position.	100										
10	Creep speed Set the creep speed after the proximity dog is detected.	10	10	PT06	Creep speed Set the servo motor speed when returning to the home position.	10										
11	Home position shift distance Set the shift travel distance from the detected position of Z-phase pulse in the encoder.	0	0	PT07	Home position shift distance Set the shift travel distance from the detected position of Z-phase pulse in the encoder.	0										
12	Rough match output range Set the range of remaining distance of the command outputting rough match (CPO).	0	/	PT12	Rough match output range Set the range of remaining distance of the command outputting rough match (CPO).	0										
13	JOG speed Set the JOG speed command.	100	100	PT13	JOG operation Set the JOG speed.	100										
14	S-pattern acceleration/deceleration time constant Set when inserting an S-pattern acceleration/deceleration time constant for the acceleration/deceleration time constant in the point table. This time constant is disabled when returning to the home position.	0	0	PC03	S-pattern acceleration/deceleration time constant This is used to smooth start/stop of the servo motor. Set the time of the arc part for S-pattern acceleration/deceleration. Set the same value as for MR-J2S-CP_.	0										
15	Station number setting Specify the station No. of the multi-dropped communication. Always set one station to one axis of the servo amplifier. Setting one station number to two or more stations will disable a normal communication.	0	0	PC20	Station number setting Used to set the station No. of the servo amplifier. Setting range: 0 to 31	0

0007	Servo motor-side droop pulses ( $\pm 10$ V/1000 pulses) (Note 1)
0008	Servo motor-side droop pulses ( $\pm 10$ V/10000 pulses) (Note 1)
0008 or 0009	(Note 1, 2)
0009	Servo motor-side droop pulses ( $\pm 10$ V/100000 pulses) (Note 1)
000D	Bus voltage (+8 V/400 V)

- Note 1. Units used for MR-J2S-CP\_ or MR-J2S-CL\_ are different from those for MR-J4-A-RJ. Note that the input range of existing equipment needs to be adjusted.
2. Set "0008" or "0009". When setting the value, note that the input range of existing equipment needs to be adjusted.
3. "Maximum speed" and "Maximum torque" differ depending on the servo motor. Therefore, after the existing servo motor has been replaced with an HG motor, the output voltage for "Maximum speed" or "Maximum torque" may differ.

MR-J2S- CP_ or MR-J2S- CL_				MR-J4- A_-RJ		
No.	Name and function	Initial value		No.	Name and function	Initial value
		CP	CL			
38	Speed integral compensation. Used to set the integral time constant of the speed loop. When auto tuning is selected, the auto tuning result is automatically used.	48	48	PB10	Speed integral compensation Used to set the integral time constant of the speed loop. When auto tuning mode 1 is selected, the auto tuning result is automatically used.	33.7
39	Speed differential compensation Used to set the differential compensation. To enable the setting value, turn on PC (proportional control). Setting range: 0 to 1000	980	980	PB11	Speed differential compensation Used to set the differential compensation. To enable the setting value, turn on PC (proportional control). Setting range: 0 to 1000 Set the same value as for MR-J2S- CP_.	980
40	JOG operation acceleration/deceleration time constant Set motor acceleration/deceleration time constant during the JOG operation. Setting range: 0 to 20000		100	PC01	JOG operation acceleration time constant Set the acceleration time constant during the JOG operation in the program method. Set the acceleration time required to reach the rated speed from 0 r/min.   For example, for a servo motor with a rated speed of 3000 r/min, set 3000 (3 s) to increase the speed from 0 to 1000 r/min in 1 s. Even if the value more than 20000 ms, it will be clamped at 20000 ms. Setting range: 0 to 50000	0
				PC02	JOG operation deceleration time constant Set the deceleration time constant during the JOG operation in the program method. Set the deceleration time required to reach 0 r/min from the rated speed. Even if the value more than 20000 ms, it will be clamped at 20000 ms. Setting range: 0 to 50000	0
				PC30	Home position return acceleration time constant Use this parameter to perform the home return in the program method. Set the acceleration time constant of the time when returning to the home position. Set the acceleration time required to reach the rated speed from 0 r/min. Even if the value more than 20000 ms, it will be clamped at 20000 ms. Setting range: 0 to 50000	0
41	Home position return acceleration time constant Set the accel./decel. time constant of the time when returning to the home position. Setting range: 0 to 20000		100	PC31	Home position return deceleration time constant Use this parameter to perform the home return in the program method. Set the deceleration time constant of the time when returning to the home position. Set the deceleration time required to reach 0 r/min from the rated speed. Even if the value more than 20000 ms, it will be clamped at 20000 ms. Setting range: 0 to 50000	0
				PC31	Home position return deceleration time constant Use this parameter to perform the home return in the program method. Set the deceleration time constant of the time when returning to the home position. Set the deceleration time required to reach 0 r/min from the rated speed. Even if the value more than 20000 ms, it will be clamped at 20000 ms. Setting range: 0 to 50000	0

## Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

MR-J2S- _CP_ or MR-J2S- _CL_				MR-J4- _A_-RJ		
No.	Name and function	Initial value		No.	Name and function	Initial value
		CP	CL			
42	Home position return position data Set the current position of the time when the home position return is completed. Setting range: -32768 to 32767	0	0	PT08	Home position return position data Set the current position of the time when the home position return is completed. Note that the home position return position data is changed if the following parameters are changed. Perform the home position return again. • "Position data unit" of [Pr. PT01] • "Feed length multiplication (STM)" of [Pr. PT03] • "Home position return types" of [Pr. PT04] Setting range: -32768 to 32767	0
43	Travel distance after proximity dog Set the "travel distance after proximity dog" when the count type returns to the home position. Setting range: 0 to 65535	1000	1000	PT09	Travel distance after proximity dog When the count type, dog type rear end reference, count type front end reference and dog type front end reference return to the home position, set the "travel distance after proximity dog". Setting range: 0 to 65535	1000
44	Stopper type home position return - Stopper time When the stopper type returns to the home position, after pressing against the stopper, set the time between when the parameter No.45 (ZTT) reaches the torque limit and the time when setting the home position. Setting range: 5 to 1000	100	100	PT10	Stopper type home position return - Stopper time When the stopper type returns to the home position, after pressing against the stopper, set the time between when the [Pr. PT11 Stopper type home position return torque limit value] reaches the torque limit and the time when setting the home position. Setting the value between "0" and "4" will result in the same value as the one with "5" set. Setting range: 0 to 1000	100
45	Stopper type home position return torque limit value Set the torque limit value of the time when the stopper type returns to the home position by a ratio [%] to the maximum torque. Setting range: 1 to 100	15	15	PT11	Stopper type home position return torque limit value Set the torque limit value of the time when the stopper type returns to the home position by a ratio [%] to the maximum torque. Setting "0.0" will result in the same value as the one with "1.0" set. Setting range: 0:0 to 100.0	15.0

# Part 4: Review on Replacement of MR-J2S-CP/CL with MR-J4-A-RJ

MR-J2S-CP_ or MR-J2S-CL_				MR-J4-A-RJ												
No.	Name and function	Initial value		No.	Name and function	Initial value										
		CP	CL													
69	Gain switching condition Used to set the values for the gain switching conditions (command frequency, droop pulses, and servo motor speed) selected in [Pr. 68]. The set value unit differs depending on the switching condition item. Setting range: 0 to 9999	10	10	PB27	Gain switching condition Used to set the values for the gain switching conditions (command frequency, droop pulses, and servo motor speed) selected in [Pr. PB26]. The set value unit differs depending on the switching condition item. Setting range: 0 to 9999 Set the same value as for MR-J2S-CP_.	10										
70	Gain switching time constant Used to set the time constant at which the gains will switch in response to the conditions set in [Pr. 68] and [Pr. 69]. Setting range: 0 to 100	1	1	PB28	Gain switching time constant Used to set the time constant at which the gains will switch in response to the conditions set in [Pr. PB26] and [Pr. PB27]. Setting range: 0 to 100 Set the same value as for MR-J2S-CP_.	1										
74	OUT1 output time setting Set the output time when the program output 1 (OUT1) is turned on by the OUTON command. If "0" is set, it remains turned on. Setting range: 0 to 2000; Unit: 10 ms		0	PT23	OUT1 output setting time Set the output time when the program output 1 (OUT1) is turned on by the OUTON command. If "0" is set, it remains turned on. Use the OUTOF command to turn off.  Setting range: 0 to 20000	0										
75	OUT2 output time setting Set the output time when the program output 2 (OUT2) is turned on by the OUTON command. If "0" is set, it remains turned on. Setting range: 0 to 2000; Unit: 10 ms		0	PT24	OUT2 output setting time Set the output time when the program output 2 (OUT2) is turned on by the OUTON command. If "0" is set, it remains turned on. Use the OUTOF command to turn off.  Setting range: 0 to 20000	0										
76	OUT3 output time setting Set the output time when the program output 3 (OUT3) is turned on by the OUTON command. If "0" is set, it remains turned on. Setting range: 0 to 2000; Unit: 10 ms		0	PT25	OUT3 output setting time Set the output time when the program output 3 (OUT3) is turned on by the OUTON command. If "0" is set, it remains turned on. Use the OUTOF command to turn off.  Setting range: 0 to 20000	0										
77	Program input polarity selection 1 Select the device that reverses the input polarity for the program input 1 (PI1), program input (PI2), and program input (PI3).  		0000h	PT29	Function selection T-3 Set the polarities of PI1, PI2 and PI3.  <table border="1" data-bbox="978 1541 1358 1868"> <thead> <tr> <th>Setting digit</th> <th>Function</th> </tr> </thead> <tbody> <tr> <td>__x_ (HEX)</td> <td>__x_ (BIN): PI1 (Program input 1) polarity selection 0: Positive logic 1: Negative logic</td> </tr> <tr> <td>__x_ (HEX)</td> <td>__x_ (BIN): PI2 (Program input 2) polarity selection 0: Positive logic 1: Negative logic</td> </tr> <tr> <td>_x__ (HEX)</td> <td>_x__ (BIN): PI3 (Program input 3) polarity selection 0: Positive logic 1: Negative logic</td> </tr> <tr> <td>x___ (HEX)</td> <td>x___ (BIN): For manufacturer setting</td> </tr> </tbody> </table>	Setting digit	Function	__x_ (HEX)	__x_ (BIN): PI1 (Program input 1) polarity selection 0: Positive logic 1: Negative logic	__x_ (HEX)	__x_ (BIN): PI2 (Program input 2) polarity selection 0: Positive logic 1: Negative logic	_x__ (HEX)	_x__ (BIN): PI3 (Program input 3) polarity selection 0: Positive logic 1: Negative logic	x___ (HEX)	x___ (BIN): For manufacturer setting	0000h
Setting digit	Function															
__x_ (HEX)	__x_ (BIN): PI1 (Program input 1) polarity selection 0: Positive logic 1: Negative logic															
__x_ (HEX)	__x_ (BIN): PI2 (Program input 2) polarity selection 0: Positive logic 1: Negative logic															
_x__ (HEX)	_x__ (BIN): PI3 (Program input 3) polarity selection 0: Positive logic 1: Negative logic															
x___ (HEX)	x___ (BIN): For manufacturer setting															

## Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

### 3.7 Comparison of Communication Commands

[Communication command comparison between MR-J2S- \_CP\_ series and MR-J4- \_A\_-RJ series]

Table 4.1 compares the read commands between the MR-J2S- \_CP\_ series and MR-J4- \_A\_-RJ series ([Pr. PT01]: when setting "2 \_ \_ \_"), and table 4.2 compares the write commands. The functions added in the MR-J4-A-RJ series are not included here. For details, refer to "MR-J4- \_A\_-RJ/MR-J4-03A6-RJ Servo Amplifier Instruction Manual (Positioning Mode (SH(NA)030143))".

POINT
<ul style="list-style-type: none"> <li>● [Pr. PT01]: MR Configurator2 cannot be used when the parameter is set to "2 _ _ _".</li> <li>● Even if a command or data No. is the same between different model servo amplifiers, its description may differ.</li> <li>● Functions with difference are shown with shading.</li> </ul>

[Table 4.1] Compares the read commands between MR-J2S- \_CP\_ and MR-J4- \_A\_-RJ ([Pr. PT01]: when setting "2 \_ \_ \_").

#### (1) Status Display (command [0] [1])

Command	Data No.	Description	Displayed items		Frame length
			MR-J2S- _CP_	MR-J4- _A_-RJ [Pr. PT01]: when setting "2 _ _ _"	
[0] [1]	[8] [0]	Data value of status display and processed information	Current position	Current position	12
	[8] [1]		Command position:	Command position:	
	[8] [2]		Command remaining distance	Command remaining distance	
	[8] [3]		Point table No.	Point table No.	
	[8] [4]		Cumulative Feedback Pulses	Cumulative Feedback Pulses	
	[8] [5]		Servo motor speed	Servo motor speed	
	[8] [6]		Droop pulses	Droop pulses	
	[8] [7]		Override	Override	
	[8] [8]		Torque limit voltage	Torque limit voltage	
	[8] [9]		Regenerative load ratio	Regenerative load ratio	
	[8] [A]		Effective load ratio	Effective load ratio	
	[8] [B]		Peak load ratio	Peak load ratio	
	[8] [C]		Instantaneous torque	Instantaneous torque	
	[8] [D]		Within one-revolution position	Within one-revolution position	
	[8] [E]		ABS counter	ABS counter	
	[8] [F]		Load to inertia moment ratio	Load to inertia moment ratio	
[9] [0]	Bus voltage	Bus voltage			

#### (2) Parameter (command [0] [5])

Command	Data No.	Description		Frame length
		MR-J2S- _CP_	MR-J4- _A_-RJ [Pr. PT01]: when setting "2 _ _ _"	
[0] [5]	[0] [0] to [5] [A]	Current values of each parameter The data number converted from hexadecimal to decimal corresponds to the parameter No.	Current values of each parameter <b>Read the current parameter in the parameter group specified by the command [8][5] + data No. [0][0]. Thus, make sure to specify the parameter group by the command [8][5] + data No. [0][0] before reading the current value.</b> The data number converted from hexadecimal to decimal corresponds to the parameter No.	8

## Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

### (3) External I/O signal (command [ 1 ] [2])

Command	Data No.	Description		Frame length
		MR-J2S- _CP_	MR-J4- _A_-RJ [Pr. PT01]: when setting "2 _ _ _"	
[1] [2]	[0] [0]	Input Device Status	Input Device Status	8
	[4] [0]	External Input Pin Status	External Input Pin Status	
	[6] [0]	Input device status turned on by the communication	Input device status turned on by the communication	
	[8] [0]	Output Device Status	Output Device Status	
	[C] [0]	External Output Pin Status	External Output Pin Status	

### (4) Current alarm (command [0] [2])

Command	Data No.	Description		Frame length
		MR-J2S- _CP_	MR-J4- _A_-RJ [Pr. PT01]: when setting "2 _ _ _"	
[0] [2]	[0] [0]	Alarm No. of alarm currently generated	Alarm No. of alarm currently generated	4

### (5) Status display at alarm occurrence (command [3] [5])

Command	Data No.	Description	Displayed items		Frame length
			MR-J2S- _CP_	MR-J4- _A_-RJ [Pr. PT01]: when setting "2 _ _ _"	
[3] [5]	[8] [0]	Data value of status display and processed information when an alarm occurs	Current position	Current position	12
	[8] [1]		Command position	Command position	
	[8] [2]		Command remaining distance	Command remaining distance	
	[8] [3]		Point table No.	Point table No.	
	[8] [4]		Cumulative Feedback Pulses	Cumulative Feedback Pulses	
	[8] [5]		Servo motor speed	Servo motor speed	
	[8] [6]		Droop pulses	Droop pulses	
	[8] [7]		Override	Override	
	[8] [8]		Torque limit voltage	Torque limit voltage	
	[8] [9]		Regenerative load ratio	Regenerative load ratio	
	[8] [A]		Effective load ratio	Effective load ratio	
	[8] [B]		Peak load ratio	Peak load ratio	
	[8] [C]		Instantaneous torque	Instantaneous torque	
	[8] [D]		Within one-revolution position	Within one-revolution position	
	[8] [E]		ABS counter	ABS counter	
	[8] [F]		Load to inertia moment ratio	Load to inertia moment ratio	
[9] [0]	Bus voltage	Bus voltage			

## Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

### (6) Point table (command [4] [0]/[5] [0]/[5] [4]/[5] [8]/[6] [0]/[6] [4])

Command	Data No.	Description		Frame length
		MR-J2S- _CP_	MR-J4- _A_-RJ [Pr. PT01]: when setting "2 _ _ _"	
[4] [0]	[0] [1] to [1] [F] (Note)	Reading the position data for each point table  The data number converted from hexadecimal to decimal corresponds to the point table No.	Reading the position data for each point table  The data number converted from hexadecimal to decimal corresponds to the point table No.	8
[5] [0]	[0] [1] to [1] [F] (Note)	Reading the speed data for each point table  The data number converted from hexadecimal to decimal corresponds to the point table No.	Reading the speed data for each point table  The data number converted from hexadecimal to decimal corresponds to the point table No.	
[5] [4]	[0] [1] to [1] [F] (Note)	Reading the acceleration time constant for each point table  The data number converted from hexadecimal to decimal corresponds to the point table No.	Reading the acceleration time constant for each point table  The data number converted from hexadecimal to decimal corresponds to the point table No.	
[5] [8]	[0] [1] to [1] [F] (Note)	Reading the deceleration time constant for each point table  The data number converted from hexadecimal to decimal corresponds to the point table No.	Reading the deceleration time constant for each point table  The data number converted from hexadecimal to decimal corresponds to the point table No.	
[6] [0]	[0] [1] to [1] [F] (Note)	Reading the dwell for each point table  The data number converted from hexadecimal to decimal corresponds to the point table No.	Reading the dwell for each point table  The data number converted from hexadecimal to decimal corresponds to the point table No.	
[6] [4]	[0] [1] to [1] [F] (Note)	Reading the sub function for each point table  The data number converted from hexadecimal to decimal corresponds to the point table No.	Reading the sub function for each point table  The data number converted from hexadecimal to decimal corresponds to the point table No.	

Note. MR-J4- \_A\_-RJ will be in the range between [0] [1] and [F] [F].

### (7) Group setting (command [1] [F])

Command	Data No.	Description		Frame length
		MR-J2S- _CP_	MR-J4- _A_-RJ [Pr. PT01]: when setting "2 _ _ _"	
[1] [F]	[0] [0]	Reading the group setting value.	Reading the group setting value.	4

### (8) Software version (command [0] [2])

Command	Data No.	Description		Frame length
		MR-J2S- _CP_	MR-J4- _A_-RJ [Pr. PT01]: when setting "2 _ _ _"	
[0] [2]	[7] [0]	Software version	Software version	16

## Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

[Table 4.2] Compares the write commands between MR-J2S- \_CP\_ and MR-J4- \_A\_-RJ ([Pr. PT01]: when setting "2 \_ \_ \_").

### (1) Status Display (command [8] [1])

Command	Data No.	MR-J2S- _CP_		MR-J4- _A_-RJ [Pr. PT01]: when setting "2 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[8] [1]	[0] [0]	Erasing the status display data	1EA5	Erasing the status display data	1EA5	4

### (2) Parameter (command [8] [4])

Command	Data No.	MR-J2S- _CP_		MR-J4- _A_-RJ [Pr. PT01]: when setting "2 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[8] [4]	[0] [0] to [5] [A] (Note)	Writing each parameter The data number converted from hexadecimal to decimal corresponds to the parameter No.	Varies with the parameter.	Writing each parameter  <b>Write the parameter in the parameter group specified by the command [85] + data No. [00]. Thus, make sure to specify the parameter group by the command [85] + data No. [00] before writing the value.</b> The data number converted from hexadecimal to decimal corresponds to the parameter No.	Varies with the parameter.	8

Note. MR-J4- \_A\_-RJ will be in the range between [0] [1] and [F] [F].

### (3) External I/O signal (command [9] [2])

Command	Data No.	MR-J2S- _CP_		MR-J4- _A_-RJ [Pr. PT01]: when setting "2 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[9] [2]	[6] [0]	Communication input device signal	Refer to "MR-J2S- _CP_ Servo Amplifier Instruction Manual" Section 15.12.5.	Communication input device signal	Refer to "MR-J4- _A_-RJ Servo Amplifier Instruction Manual" Section 10.2.2.	8

### (4) Alarm history (command [8] [2])

Command	Data No.	MR-J2S- _CP_		MR-J4- _A_-RJ [Pr. PT01]: when setting "2 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[8] [2]	[2] [0]	Alarm History Clearing	1EA5	Alarm History Clearing	1EA5	4

### (5) Current alarm (command [8] [2])

Command	Data No.	MR-J2S- _CP_		MR-J4- _A_-RJ [Pr. PT01]: when setting "2 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[8] [2]	[0] [0]	Clearing alarms	1EA5	Clearing alarms	1EA5	4

## Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

### (6) Point table (command [C] [0]/[C] [6]/[C] [7]/[C] [8]/[C] [A]/[C] [B])

Command	Data No.	MR-J2S- _CP_		MR-J4- _A_-RJ [Pr. PT01]: when setting "2 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[C] [0]	[0] [1] to [1] [F] (Note)	Writing the position data for each point table The data number converted from hexadecimal to decimal corresponds to the point table No.	-999999 to 999999	Writing the position data for each point table The data number converted from hexadecimal to decimal corresponds to the point table No.	-999999 to 999999	8
[C] [6]	[0] [1] to [1] [F] (Note)	Writing the speed data for each point table The data number converted from hexadecimal to decimal corresponds to the point table No.	0 to Permissible speed	Writing the speed data for each point table The data number converted from hexadecimal to decimal corresponds to the point table No.	0 to Permissible speed	8
[C] [7]	[0] [1] to [1] [F] (Note)	Writing the acceleration time constant for each point table The data number converted from hexadecimal to decimal corresponds to the point table No.	0 to 20000	Writing the acceleration time constant for each point table The data number converted from hexadecimal to decimal corresponds to the point table No.	0 to 20000	8
[C] [8]	[0] [1] to [1] [F] (Note)	Writing the deceleration time constant for each point table The data number converted from hexadecimal to decimal corresponds to the point table No.	0 to 20000	Writing the deceleration time constant for each point table The data number converted from hexadecimal to decimal corresponds to the point table No.	0 to 20000	8
[C] [A]	[0] [1] to [1] [F] (Note)	Writing the dwell for each point table The data number converted from hexadecimal to decimal corresponds to the point table No.	0 to 20000	Writing the dwell for each point table The data number converted from hexadecimal to decimal corresponds to the point table No.	0 to 20000	8
[C] [B]	[0] [1] to [1] [F] (Note)	Writing the sub function for each point table The data number converted from hexadecimal to decimal corresponds to the point table No.	0, 1	Writing the sub function for each point table The data number converted from hexadecimal to decimal corresponds to the point table No.	<b>0 to 3, 8 to 11</b>	8

Note. MR-J4- \_A\_-RJ will be in the range between [0] [1] and [F] [F].

## Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

### (7) I/O device inhibition (command [9] [0])

Command	Data No.	MR-J2S- _CP_		MR-J4- _A_-RJ [Pr. PT01]: when setting "2 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[9] [0]	[0] [0]	Turn off the input devices (except EMG, LSP and LSN), external analog input signal, and pulse train input regardless of the external ON/OFF state.	1EA5	Turn off the input devices (except EMG, LSP and LSN), external analog input signal, and pulse train input regardless of the external ON/OFF state.	1EA5	4
	[0] [3]	Disable all the output devices (DO). (Inhibit output)	1EA5	Disable all the output devices (DO). (Inhibit output)	1EA5	
	[1] [0]	Cancel the inhibition of the input devices (except EMG, LSP and LSN), external analog input signal, and pulse train input.	1EA5	Cancel the inhibition of the input devices (except EMG, LSP and LSN), external analog input signal, and pulse train input.	1EA5	
	[1] [3]	Cancel the inhibition of output devices.	1EA5	Cancel the inhibition of output devices.	1EA5	

### (8) Operation mode selection (command [8] [B])

Command	Data No.	MR-J2S- _CP_		MR-J4- _A_-RJ [Pr. PT01]: when setting "2 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[8] [B]	[0] [0]	Operation mode switching 0000: Test Operation Mode Cancellation  0001: JOG operation 0002: Positioning operation 0003: Motor-less operation 0004: Output signal (DO) forced output	Refer to the left column.	Operation mode switching 0000: Normal mode (When not in test operation mode) 0001: JOG operation 0002: Positioning operation mode  0004: DO forced output operation mode	Refer to the left column.	4

## Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

### (9) Data for test operation mode (command [9] [2]/[A] [0])

Command	Data No.	MR-J2S- _CP_		MR-J4- _A_-RJ [Pr. PT01]: when setting "2 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[9] [2]	[0] [0]	Input Signal During Test Operation	Refer to "MR-J2S- _CP_ Servo Amplifier Instruction Manual" Section 15.12.7.	Input Signal During Test Operation	Refer to "MR-J4- _A_-RJ Servo Amplifier Instruction Manual" Section 14.5.7.	8
	[A][0]	Signal Pin Forced Output	Refer to "MR-J2S- _CP_ Servo Amplifier Instruction Manual" Section 15.12.9.	Signal Pin Forced Output	Refer to "MR-J4- _A_-RJ Servo Amplifier Instruction Manual" Section 14.5.9.	8
[A] [0]	[1] [0]	Write the speed in the test operation mode (JOG operation/positioning operation).	0000-7FFF	Write the speed in the test operation mode (JOG operation/positioning operation).	0000-7FFF	4
	[1] [1]	Write the acceleration/deceleration time constants in the test operation mode (JOG operation/positioning operation).	00000000 to 7FFFFFFF	Write the acceleration/deceleration time constants in the test operation mode (JOG operation/positioning operation).	00000000 to 7FFFFFFF	8
	[1] [2]	Cancel the acceleration/deceleration time constants in the test operation mode (JOG operation/positioning operation).	1EA5			4
	[1] [3]	Write the pulse travel distance in the test operation mode (positioning operation).	80000000 to 7FFFFFFF	<b>Refer to Data No. [2] [0] and [2] [1].</b>		8
	[1] [5]	Temporary stop command for the test operation mode (positioning operation).	1EA5	<b>Refer to Data No. [4] [1].</b>		4
	[2] [0]			<b>Set the travel distance in the test operation mode (positioning operation).</b>	<b>00000000 to 7FFFFFFF</b>	<b>8</b>
	[2] [1]			<b>Select the positioning direction of the test operation (positioning operation).</b>	<b>0000 to 0001</b>	4
	[4] [0]			The start command for the test operation (positioning operation).	1EA5	4
	[4] [1]			<b>Use to stop the test drive (positioning operation) temporarily. Symbols " _ " below indicate blanks. STOP: Temporary stop GO_ : Restarting the remaining distance CLR_ : Clearing the remaining distance</b>	<b>STOP GO_ CLR_</b>	4

### (10) Group setting (command [9] [F])

Command	Data No.	MR-J2S- _CP_		MR-J4- _A_-RJ [Pr. PT01]: when setting "2 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[9] [F]	[0] [0]	Set groups	a to f	Set groups	a to f	4

## Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

[Communication command comparison between MR-J2S- \_CL\_ series and MR-J4- \_A\_-RJ series]

Table 4.3 compares the read commands between the MR-J2S- \_CL\_ series and MR-J4- \_A\_-RJ series ([Pr. PT01]: when setting "3 \_ \_ \_"), and table 4.4 compares the write commands. The functions added in the MR-J4- \_A\_-RJ series are not included here. For details, refer to "MR-J4- \_A\_-(-RJ) Servo Amplifier Instruction Manual (SH(NA)030143)".

POINT
● [Pr. PT01]: MR Configurator2 cannot be used when the parameter is set to "3 _ _ _".

[Table 4.3] Compares the read commands between MR-J2S- \_CL\_ and MR-J4- \_A\_-RJ ([Pr. PT01]: when setting "3 \_ \_ \_").

### (1) Status Display (command [0] [1])

Command	Data No.	Description	Displayed items		Frame length
			MR-J2S- _CL_	MR-J4- _A_-RJ [Pr. PT01]: when setting "3 _ _ _"	
[0] [1]	[8] [0]	Data value of status display and processed information	Current position	Current position	12
	[8] [1]		Command position	Command position	
	[8] [2]		Command remaining distance	Command remaining distance	
	[8] [3]		Program No.	Program No.	
	[8] [4]		Step No.	Step No.	
	[8] [5]		Cumulative Feedback Pulses	Cumulative Feedback Pulses	
	[8] [6]		Servo motor speed	Servo motor speed	
	[8] [7]		Droop pulses	Droop pulses	
	[8] [8]		Override	Override	
	[8] [9]		Torque limit voltage	Torque limit voltage	
	[8] [A]		Regenerative load ratio	Regenerative load ratio	
	[8] [B]		Effective load ratio	Effective load ratio	
	[8] [C]		Peak load ratio	Peak load ratio	
	[8] [D]		Instantaneous torque	Instantaneous torque	
	[8] [E]		Within one-revolution position	Within one-revolution position	
	[8] [F]		ABS counter	ABS counter	
	[9] [0]		Load to inertia moment ratio	Load to inertia moment ratio	
[9] [1]	Bus voltage	Bus voltage			

### (2) Parameter (command [0] [5])

Command	Data No.	Description		Frame length
		MR-J2S- _CL_	MR-J4- _A_-RJ [Pr. PT01]: when setting "3 _ _ _"	
[0] [5]	[0] [0] to [5] [A]	Current values of each parameter The data number converted from hexadecimal to decimal corresponds to the parameter No.	Current values of each parameter <b>Read the current parameter in the parameter group specified by the command [8] [5] + data No. [0] [0]. Thus, make sure to specify the parameter group by the command [8] [5] + data No. [0][0] before reading the current value.</b> The data number converted from hexadecimal to decimal corresponds to the parameter No.	8

## Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

### (3) External I/O signal (command [1] [2])

Command	Data No.	Description		Frame length
		MR-J2S- _CL_	MR-J4- _A_-RJ [Pr. PT01]: when setting "3 _ _ _"	
[1] [2]	[0] [0]	Input Device Status	Input Device Status	8
	[4] [0]	External Input Pin Status	External Input Pin Status	
	[6] [0]	Input device status turned on by the communication	Input device status turned on by the communication	
	[8] [0]	Output Device Status	Output Device Status	
	[C] [0]	External Output Pin Status	External Output Pin Status	

### (4) Current alarm (command [0] [2]/ [3] [5])

Command	Data No.	Description		Frame length
		MR-J2S- _CL_	MR-J4- _A_-RJ [Pr. PT01]: when setting "3 _ _ _"	
[0] [2]	[0] [0]	Alarm No. of alarm currently generated	Alarm No. of alarm currently generated	4

Command	Data No.	Description	Displayed items		Frame length
			MR-J2S- _CL_	MR-J4- _A_-RJ [Pr. PT01]: when setting "3 _ _ _"	
[3] [5]	[8] [0]	Data value of status display and processed information when an alarm occurs	Current position	Current position	12
	[8] [1]		Command position	Command position	
	[8] [2]		Command remaining distance	Command remaining distance	
	[8] [3]		Program No.	Program No.	
	[8] [4]		Step No.	Step No.	
	[8] [5]		Cumulative Feedback Pulses	Cumulative Feedback Pulses	
	[8] [6]		Servo motor speed	Servo motor speed	
	[8] [7]		Droop pulses	Droop pulses	
	[8] [8]		Override	Override	
	[8] [9]		Torque limit voltage	Torque limit voltage	
	[8] [A]		Regenerative load ratio	Regenerative load ratio	
	[8] [B]		Effective load ratio	Effective load ratio	
	[8] [C]		Peak load ratio	Peak load ratio	
	[8] [D]		Instantaneous torque	Instantaneous torque	
	[8] [E]		Within one-revolution position	Within one-revolution position	
	[8] [F]		ABS counter	ABS counter	
	[9] [0]		Load to inertia moment ratio	Load to inertia moment ratio	
[9] [1]	Bus voltage	Bus voltage			

### (5) Group setting (command [1] [F])

Command	Data No.	Description		Frame length
		MR-J2S- _CL_	MR-J4- _A_-RJ [Pr. PT01]: when setting "3 _ _ _"	
[1] [F]	[0] [0]	Reading the group setting value.	Reading the group setting value.	4

### (6) Software version (command [0] [2])

Command	Data No.	Description		Frame length
		MR-J2S- _CL_	MR-J4- _A_-RJ [Pr. PT01]: when setting "3 _ _ _"	
[0] [2]	[7] [0]	Software version	Software version	16

## Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

[Table 4.4] Compares the write commands between MR-J2S- \_CL\_ and MR-J4- \_A\_-RJ ([Pr. PT01]: when setting "3 \_ \_ \_").

### (1) Status Display (command [8] [1])

Command	Data No.	MR-J2S- _CL_		MR-J4- _A_-RJ [Pr. PT01]: when setting "3 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[8] [1]	[0] [0]	Erasing the status display data	1EA5	Erasing the status display data	1EA5	4

### (2) Parameter (command [8] [4])

Command	Data No.	MR-J2S- _CL_		MR-J4- _A_-RJ [Pr. PT01]: when setting "3 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[8] [4]	[0] [0] to [5] [A] (Note)	Writing each parameter The data number converted from hexadecimal to decimal corresponds to the parameter No.	Varies with the parameter.	Writing each parameter  <b>Write the parameter in the parameter group specified by the command [85] + data No. [00]. Thus, make sure to specify the parameter group by the command [85] + data No. [00] before writing the value.</b> The data number converted from hexadecimal to decimal corresponds to the parameter No.	Varies with the parameter.	8

Note. MR-J4- \_A\_-RJ will be in the range between [0][1] and [F][F].

### (3) External I/O signal (command [9] [2])

Command	Data No.	MR-J2S- _CL_		MR-J4- _A_-RJ [Pr. PT01]: when setting "3 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[9] [2]	[6] [0]	Communication input device signal	Refer to "MR-J2S- _CL_ Servo Amplifier Instruction Manual" Section 15.12.5.	Communication input device signal	Refer to "MR-J4- _A_-RJ Servo Amplifier Instruction Manual" Section 10.2.2.	8

### (4) Alarm history (command [8] [2])

Command	Data No.	MR-J2S- _CL_		MR-J4- _A_-RJ [Pr. PT01]: when setting "3 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[8] [2]	[2] [0]	Alarm History Clearing	1EA5	Alarm History Clearing	1EA5	4

### (5) Current alarm (command [8] [2])

Command	Data No.	MR-J2S- _CL_		MR-J4- _A_-RJ [Pr. PT01]: when setting "3 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[8] [2]	[0] [0]	Clearing alarms	1EA5	Clearing alarms	1EA5	4

## Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

### (6) I/O device inhibition (command [9] [0])

Command	Data No.	MR-J2S- _CL_		MR-J4- _A_-RJ [Pr. PT01]: when setting "3 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[9] [0]	[0] [0]	Turn off the input devices (except EMG, LSP and LSN), external analog input signal, and pulse train input regardless of the external ON/OFF state.	1EA5	Turn off the input devices (except EMG, LSP and LSN), external analog input signal, and pulse train input regardless of the external ON/OFF state.	1EA5	4
	[0] [3]	Disable all the output devices (DO). (Inhibit output)	1EA5	Disable all the output devices (DO). (Inhibit output)	1EA5	
	[1] [0]	Cancel the inhibition of the input devices (except EMG, LSP and LSN), external analog input signal, and pulse train input.	1EA5	Cancel the inhibition of the input devices (except EMG, LSP and LSN), external analog input signal, and pulse train input.	1EA5	
	[1] [3]	Cancel the inhibition of output devices.	1EA5	Cancel the inhibition of output devices.	1EA5	

### (7) Operation mode selection (command [8] [B])

Command	Data No.	MR-J2S- _CL_		MR-J4- _A_-RJ [Pr. PT01]: when setting "3 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[8] [B]	[0] [0]	Operation mode switching 0000: Test Operation Mode Cancellation  0001: JOG operation 0002: Positioning operation 0003: Motor-less operation Output signal (DO) forced output	Refer to the left column.	Operation mode switching 0000: Normal mode (When not in the test operation mode) 0001: JOG operation 0002: Positioning operation mode  DO forced output operation mode	Refer to the left column.	4

## Part 4: Review on Replacement of MR-J2S- \_CP\_/CL\_ with MR-J4- \_A\_-RJ

### (8) Data for test operation mode (command [9] [2]/ [A] [0])

Command	Data No.	MR-J2S- _CL_		MR-J4- _A_-RJ [Pr. PT01]: when setting "3 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[9] [2]	[0] [0]	Input Signal During Test Operation	Refer to "MR-J2S- _CL_ Servo Amplifier Instruction Manual" Section 15.12.7.	Input Signal During Test Operation	Refer to "MR-J4- _A_-RJ Servo Amplifier Instruction Manual" Section 14.5.7.	8
	[A] [0]	Signal Pin Forced Output	Refer to "MR-J2S- _CL_ Servo Amplifier Instruction Manual" Section 15.12.9.	Signal Pin Forced Output	Refer to "MR-J4- _A_-RJ Servo Amplifier Instruction Manual" Section 14.5.9.	8
[A] [0]	[1] [0]	Write the speed in the test operation mode (JOG operation/positioning operation).	0000 to 7FFF	Write the speed in the test operation mode (JOG operation/positioning operation).	0000 to 7FFF	4
	[1] [1]	Write the acceleration/deceleration time constants in the test operation mode (JOG operation/positioning operation).	00000000 to 7FFFFFFF	Write the acceleration/deceleration time constants in the test operation mode (JOG operation/positioning operation).	00000000 to 7FFFFFFF	8
	[1] [2]	Cancel the acceleration/deceleration time constants in the test operation mode (JOG operation/positioning operation).	1EA5			4
	[1] [3]	Write the pulse travel distance in the test operation mode (positioning operation).	80000000 to 7FFFFFFF	Refer to Data No. [2] [0] and [2] [1].		8
	[1] [5]	Temporary stop command for the test operation mode (positioning operation).	1EA5	Refer to Data No. [4] [1].		4
	[2][0]			Set the travel distance in the test operation mode (positioning operation).	00000000 to 7FFFFFFF	8
	[2][1]			Select the positioning direction of the test operation (positioning operation).	0000 to 0001	4
	[4][0]			The start command for the test operation (positioning operation).	1EA5	4
	[4][1]			Use to stop the test drive (positioning operation) temporarily. Symbols " _ " below indicate blanks. STOP: Temporary stop GO _ : Restarting the remaining distance CLR _ : Clearing the remaining distance	STOP GO _ CLR _	4

### (9) Group setting (command [9] [F])

Command	Data No.	MR-J2S- _CL_		MR-J4- _A_-RJ [Pr. PT01]: when setting "3 _ _ _"		Frame length
		Description	Setting range	Description	Setting range	
[9] [F]	[0] [0]	Set groups	a to f	Set groups	a to f	4

**Part 5**  
**Review on Replacement of**  
**MR-J2S-30 kW or Higher**  
**Capacity Models with**  
**MR-J4-DU\_ MR-J4- DU\_**

## Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

### Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

#### 1. FUNCTIONS AND CONFIGURATION

##### 1.1 Differences Between MR-J2S-30 kW or Higher Capacity Models and MR-J4-DU\_

Item	MR-J2S-30 kW or more series	MR-J4-DU_ series	Compatibility	Reference material/items
Converter unit	200 V class: MR-HP30KA (When using a servo amplifier of 37 kW, make sure that the power running output is 30 kW or less.) 400 V class: MR-HP55KA4	200 V class: MR-CR55K 400 V class: MR-CR55K4	×	1.2 Combination of a Converter Unit, Drive Unit, and Servo Motor
Installation	Installed in cabinet (Using an outside mounting attachment enables to attach a heat sink outside the cabinet.)	A heat sink is attached outside the cabinet.	×	1.4 Installation
Magnetic contactor control Connector	Not available	Available (Enabled by default. This is the initial value of [Pr. PA02], a converter unit parameter.)	—	1.5 Magnetic Contactor Control Connector (CNP1) [Exclusively for MR-J4-DU_]
Unit Power consumption display	Not available	Available (Use converter unit parameters [Pr. PA08] and [Pr. PA15] to set this value.)	—	3 PARAMETERS
SEMI-F47 function selection	Not available	Available (Use converter unit parameter [Pr. PA17] and [Pr. PA18], and drive unit parameter [Pr. PA20] and [Pr. PF25] to set this value.)	—	3 PARAMETERS

## Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

### 1.2 Combination of Converter Unit, Drive Unit, and Servo Motor

POINT			
<ul style="list-style-type: none"> <li>● MR-J2S- _A_/_B_ cannot drive an HG motor. When the servo motor is replaced with an HG motor, simultaneous replacement with MR-J4- _A_/_B_ and an HG motor is necessary.</li> <li>● If the existing system is any of the combinations in the following table, it is recommended to replace both the servo amplifier and servo motor with an MRJ4- _A_ and HG motor at the same time. When an HG motor is adopted, the capacity of the servo amplifier needs to be changed. (Consider replacement, referring to "torque characteristics" described in "Part 8: Review on Replacement of Motor".)</li> </ul>			
Existing device models		Replacement models for simultaneous replacement (example)	
Servo motor	Servo amplifier	Servo motor	Servo amplifier
HA-LFS30K2(4)	MR-J2S-30K_(4)	HG-JR22K1M(4)	MR-J4-22K_(4)
HA-LFS37K2(4)	MR-J2S-37K_(4)	HG-JR30K1M(4)	MR-J4-DU30K_(4)
HA-LFS45K24	MR-J2S-45K_4	HG-JR37K1M4	MR-J4-DU37K_4
HA-LFS55K24	MR-J2S-55K_4	HG-JR45K1M4	MR-J4-DU45K_4
HA-LFS25K14	MR-J2S-30K_4	HG-JR25K14	MR-J4-22K_4

#### (1) MR-J2S series (a) 200 V class

Converter unit	Servo amplifier	Servo motor		
		HA-LFS_		
		1000 r/min	1500 r/min	2000 r/min
MR-HP30KA	MR-J2S-30KA/B	30K1	30K1M	30K2
	MR-J2S-37KA/B	37K1 (Note)	37K1M (Note)	37K2 (Note)

Note. Make sure that the power running effective torque is 75% or less of 37 kW. Use a DC reactor (MR-DCL37K).

#### (b) 400 V class

Converter unit	Servo amplifier	Servo motor		
		HA-LFS_		
		1000 r/min	1500 r/min	2000 r/min
MR-HP55KA4	MR-J2S-30KA4/B4	25K14, 30K14	30K1M4	30K24
	MR-J2S-37KA4/B4	37K14	37K1M4	37K24
	MR-J2S-45KA4/B4		45K1M4	45K24
	MR-J2S-55KA4/B4		50K1M4	55K24

#### (2) MR-J4 series (a) 200 V class

Converter unit	Drive unit	Servo motor	
		HG-JR_	
		1000 r/min series	1500 r/min series
MR-CR55K	MR-J4-DU30K_	30K1	30K1M
	MR-J4-DU37K_	37K1	37K1M

#### (b) 400 V class

Converter unit	Drive unit	Servo motor	
		HG-JR_	
		1000 r/min series	1500 r/min series
MR-CR55K4	MR-J4-DU30K_4	30K14	30K1M4
	MR-J4-DU37K_4	37K14	37K1M4
	MR-J4-DU45K_4		45K1M4
	MR-J4-DU55K_4		55K1M4

1.3 Configuration with Peripheral Equipment

(1) MR-J2S series

3-phase AC power supply

- Note 1. P and N conductor bars to connect a converter unit and servo amplifier are standard accessories.  
 Note 2. This system requires a converter unit.  
 Note 3. Use an MR-J2HBUS\_M\_SSCNET cable as the protection coordination cable.

# Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

## (2) MR-J4-DU\_

This diagram shows MR-J4-DU30KB4 and MR-J4-DU37KB4. The way to interface MR-J4-DU\_ is the same as MR-J4-\_. Refer to each servo amplifier instruction manual.

- Note 1. L+ and L- conductors to connect the converter unit and drive unit are standard accessories. The converter unit and drive unit are installed more closely together than they are shown in this diagram.
- Note 2. For the power supply specifications, refer to Part 7 "Common Reference Material".
- Note 3. For the power supply specifications of the cooling fan, refer to the Servo Motor Instruction Manual (Vol. 3).
- Note 4. Bus voltage decreases according to the voltage and operation pattern of the main circuit, and there may be a shift in dynamic brake deceleration during forced stop deceleration. If dynamic brake deceleration is not desired, delay the time to turn off the electromagnetic contactor.
- Note 5. Install an overcurrent protection device (molded-case circuit breaker, fuse, or others) to protect the branch circuit. (Refer to section 5.3.)
- Note 6. The converter unit and the drive unit can be connected to the control circuit power supply (L11/L21) by daisy chain. Refer to section 5.2 for the wire size and the selection of the overcurrent protection device.

1.4 Installation

Mounting direction and distance

**! Note**

- Install the converter unit and servo amplifier accurately and vertically on a perpendicular wall. Otherwise a malfunction may be caused.
- Secure the prescribed distance between the converter unit/servo amplifier and the inner surface of the cabinet or other devices. Otherwise a malfunction may be caused.
- When using equipment that generates heat, such as regenerative options, set up with sufficient consideration of heat generation so that there is no effect on the converter unit/servo amplifier.

(1) MR-J2S series

(a) For single installations

(b) Mounting dimensions

[Unit: mm]

Servo amplifier	Dimensions	
	W1	W2
MR-J2S-30KA4/B4	380	290
MR-J2S-30KA/B, 37KA/B	450	360
MR-J2S-37KA4/B4, 45KA4/B4, 55KA4/B4	450	360

# Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

## (2) MR-J4-DU\_ (a) Installation

**POINT**

- Make sure to install a drive unit on the right of a converter unit as shown in the diagram.

## (b) Mounting hole dimensions

Drive unit	Variable dimensions [mm]					Screw size A
	W1	W2	W3	W4	W5	
MR-J4-DU30K_ MR-J4-DU37K_ MR-J4-DU45K_4 MR-J4-DU55K_4	300	260 ± 0.5	20	281	9.5	M6
MR-J4-DU30K_4 MR-J4-DU37K_4	240	120 ± 0.5	60	222	9	M5

1.5 Magnetic Contactor Control Connector (CNP1) [Exclusively for MR-J4-DU\_]

**Note** ● Connect a magnetic contactor wiring connector to the converter unit. CNP1-1 and L11 are always in conduction. Leaving the connector disconnected can cause an electric shock.

**POINT**  
● The J2S series comes with no magnetic contactor control connector.

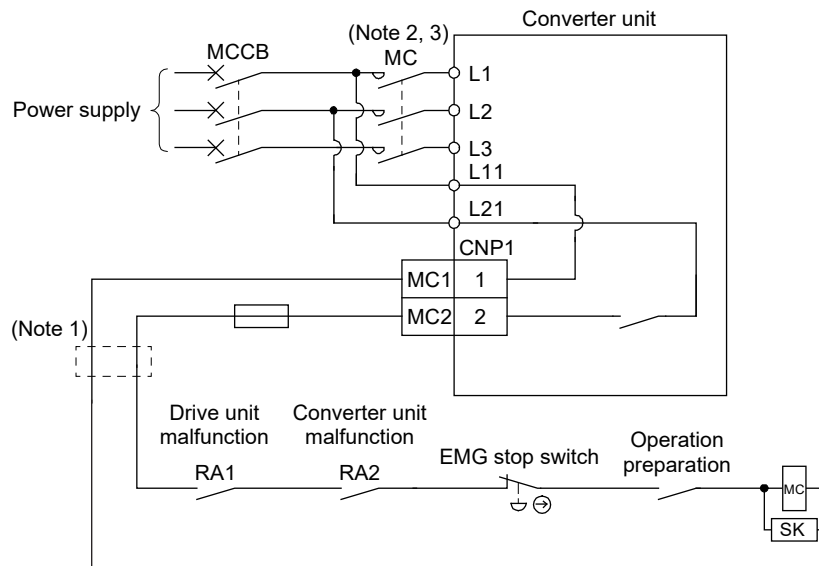

Enabling the magnetic contactor output shuts off the main circuit power supply automatically when the drive unit activates an alarm.

Setting converter unit parameter [Pr. PA02] to "\_\_\_ 1" (the initial value) enables the magnetic contactor output.

- (1) When the magnetic contactor drive output is enabled  
Connecting the magnetic contactor control connector (CNP1) to the coil of a magnetic contactor enables the control of the magnetic contactor.

CNP1 connection internal diagram

- Note 1. Use a step-down transformer when the converter unit and drive unit are 400 V class and the coil voltage of the magnetic contactor is 200 V class.  
2. Bus voltage decreases according to the voltage and operation pattern of the main circuit, and there may be a shift in dynamic brake deceleration during forced stop deceleration. If dynamic brake deceleration is not desired, delay the time to turn off the electromagnetic contactor.  
3. If instantaneous power failure or any other problem lowers the voltage of L11 or L21, the magnetic contactor turns off.

When the drive unit sends the converter unit a start up command, the converter unit shorts CNP1-2 and L21, powering the control circuit of the magnetic contactor. This turns on the magnetic contactor and powers up the main circuit of the converter unit.

In the following cases, the converter unit releases CNP1-2 and L21 and powers down the main circuit automatically.

- (a) When the converter unit activates an alarm.
  - (b) When the drive unit activates an alarm.
  - (c) When the forced stop of the converter (EM1) unit is turned off.
  - (d) When the drive unit outputs [AL. 95 STO warning].
- (2) When the magnetic contactor drive output is disabled  
Activating an alarm of the converter unit or drive unit does not shut off the main circuit power supply.  
Configure the circuit so that an alarm can be detected and the main circuit power supply can be shut off.

## 2. SIGNALS AND WIRING

### 2.1 Comparison of Standard Connection Diagrams

#### **WARNING**

- Insulate the connections of the power supply terminals. Failure to do so may cause electric shock.

#### **Note**

- Always connect a magnetic contactor between the main circuit power supply and L1/L2/L3 of the converter unit in order to configure a power supply shut-off on the power supply side of the converter unit. If a magnetic contactor is not connected, continuous flow of a large current may cause a fire when the converter unit or servo amplifier malfunctions.
- Generate a fault signal and shut off the power supply. Not doing so may cause a fire when a regenerative transistor malfunctions or the like may overheat the regenerative resistor.
- To avoid a malfunction of the servo motor, connect the wires to the correct phase terminals (U/V/W) of the drive unit and the servo motor.
- Do not connect the servo motor directly to the 3-phase 200 V power supply or the 3-phase 400 V power supply. Otherwise a malfunction may be caused.
- Do not switch the motor power cables while currents are applied to the motor. Doing so may cause an abnormal operation or a malfunction.

#### **POINT**

- When using an external dynamic brake, refer to the Servo Amplifier Instruction Manual.

# Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU

## (1) General-purpose interface 200 V class

### MR-J2S- KA

**Note 1.** This is a configuration for MR-RB137. Use three MR-RB137s in a set, which provides permissible regenerative power of 3900 W.

**Note 2.** When using a power factor improving DC reactor, remove the short-circuit bar between P1 and P2.

**Note 3.** Use an MR-J2HBUS\_M\_SSCNET cable as a protection coordination cable.

**Note 4.** Use an external dynamic brake to this servo amplifier. Without an external dynamic brake, the servo motor keeps running in a free run state at an emergency stop, leading to an accident. Take as many safety measures as possible in the system.

### MR-J4-DU\_A

**When magnetic contactor drive output is enabled (factory setting)**

**When magnetic contactor drive output is disabled**

**Note 1.** This is for MR-RB137. For the MR-RB137, three units are used as one set (permissible regenerative power: 3900 W).

**Note 2.** P1 and P2 are connected by default. When using the power factor improving DC reactor, connect P1 and P2 after removing the short bar across them.

**Note 3.** Connect the magnetic contactor wiring connector to CNP1 of the converter unit. If the connector is not connected, an electric shock may occur.

**Note 4.** For specifications of the cooling fan power supply, refer to "Servo Motor Instruction Manual (Vol. 3)".

**Note 5.** Use a magnetic contactor with an operation delay time (interval between current being applied to the coil until closure of contacts) of 80 ms or less. The bus voltage decreases depending on the main circuit voltage and operation pattern, which may cause the forced stop deceleration to shift to the dynamic brake deceleration. When dynamic brake deceleration is not required, slow the time to turn off the magnetic contactor.

**Note 6.** To prevent an unexpected restart of the drive unit, configure a circuit to turn off EM2 in the drive unit when the main circuit power is turned off.

**Note 7.** Use an external dynamic brake to this drive unit. Without an external dynamic brake, activation of an alarm which does not cause deceleration to a stop keeps the servo motor running in a free run state at an emergency stop, and may lead to an accident. Take as many safety measures as possible. For alarms which do not cause deceleration to a stop and wiring of the external dynamic brake, refer to "MR-CV\_/MR-CR55K\_/MR-J4-DU\_(-RJ) Instruction Manual".

**Note 8.** For the encoder cable, use of the option cable is recommended. For selecting cables, refer to "Servo Motor Instruction Manual (Vol. 3)".

**Note 9.** This diagram shows sink I/O interface. For source I/O interface, refer to "MR-CV\_/MR-CR55K\_/MR-J4-DU\_(-RJ) Instruction Manual".

**Note 10.** Install an overcurrent protection device (molded-case circuit breaker or fuse) to protect the branch circuit. (Refer to section 5.3.)

**Note 11.** When not using the STO function, attach the short-circuit connector supplied with the drive unit.

**Note 12.** Do not connect the servo motor of a wrong axis to U, V, W, or CN2 of the drive unit. Otherwise, a malfunction may occur.

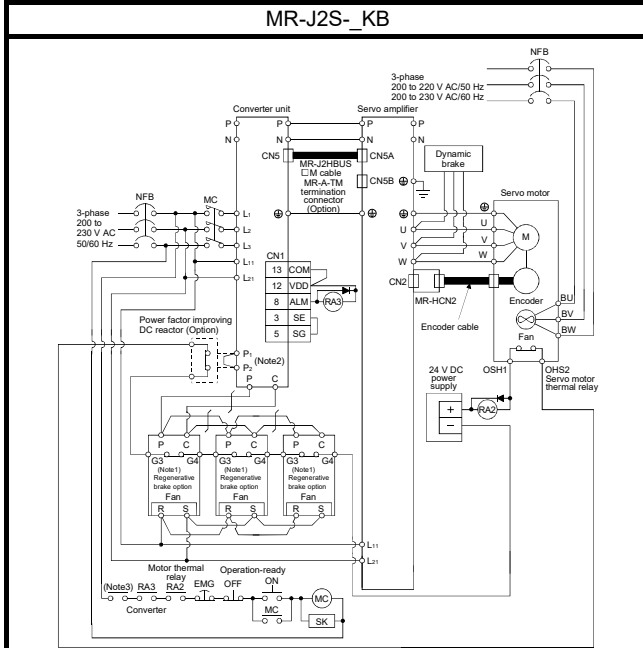

**Note 13.** For connecting servo motor power wires, refer to "Servo Motor Instruction Manual (Vol. 3)".

**Note 14.** The external dynamic brake cannot be used for compliance with SEMI-F47 standard. Do not assign DB. Failure to do so will cause the drive unit to become servo-off when an instantaneous power failure occurs..

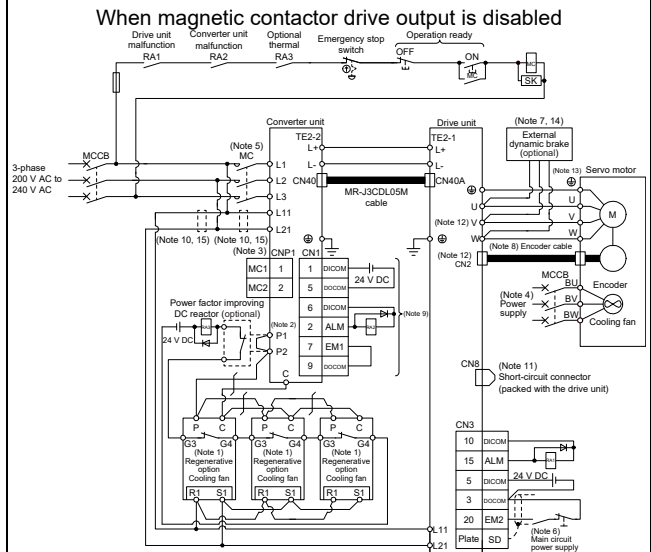

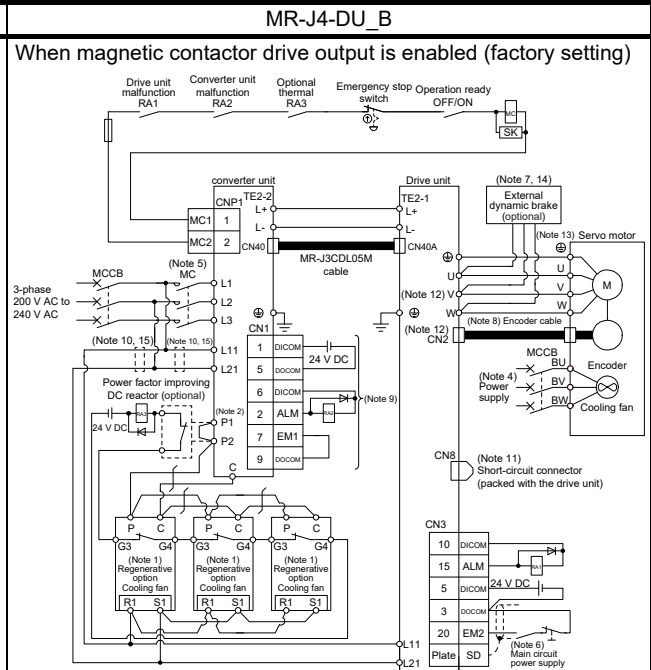

**Note 15.** The converter unit and the drive unit can be connected to the control circuit power supply (L11/L21) by daisy chain. Refer to section 5.2 for the wire size and the selection of the overcurrent protection device.

# Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

## (2) SSCNET interface 200 V class

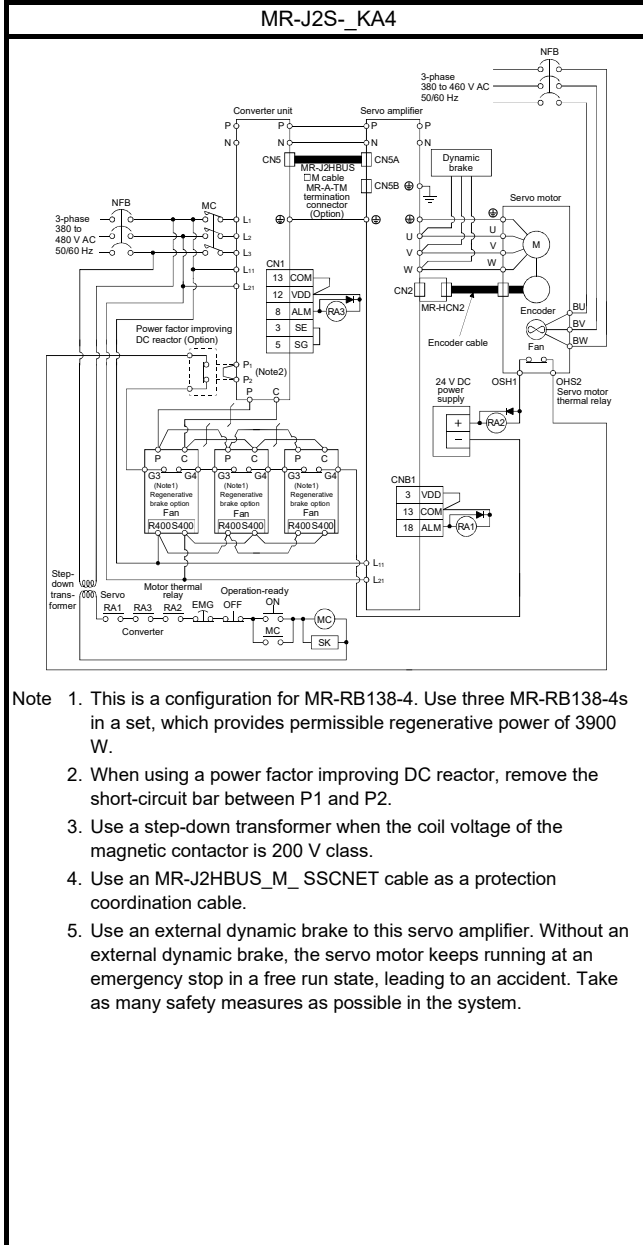

- Note
1. This is a configuration for MR-RB137. Use three MR-RB137s in a set, which provides permissible regenerative power of 3900 W.
  2. When using a power factor improving DC reactor, remove the short-circuit bar between P1 and P2.
  3. Shut off the power supply by using an external sequence when a servo alarm occurs.
  4. Use an MR-J2HBUS\_M\_SSCNET cable as a protection coordination cable.
  5. Use an external dynamic brake to this servo amplifier. Without an external dynamic brake, the servo motor keeps running in a free run state at an emergency stop, leading to an accident. Take as many safety measures as possible.

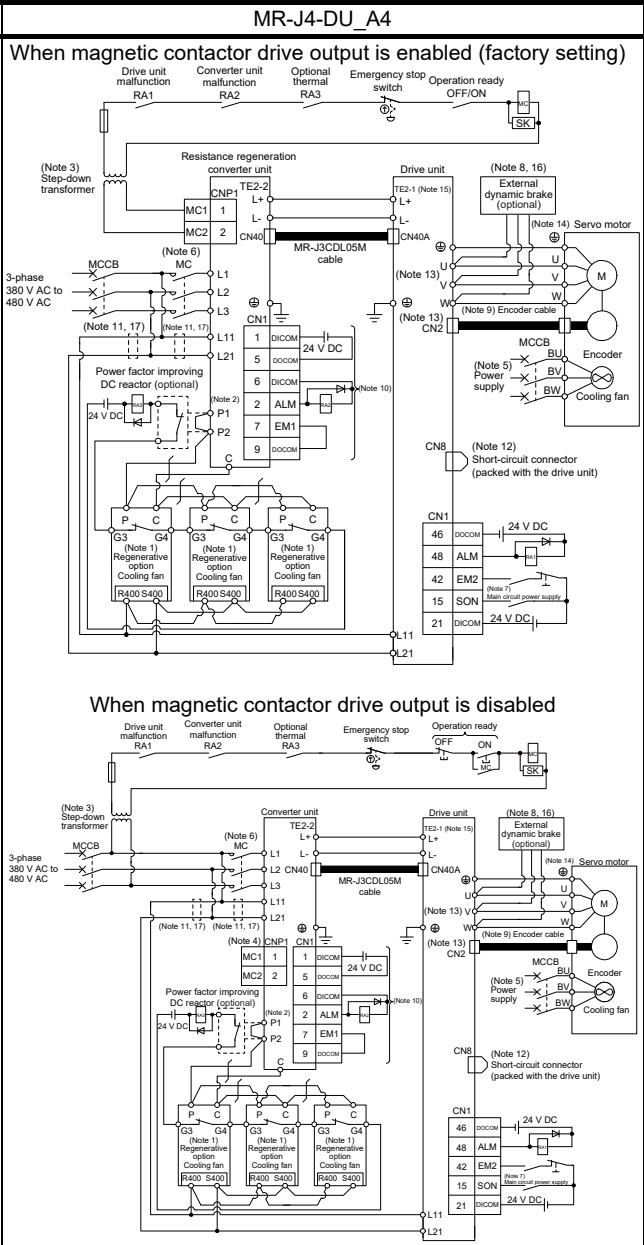

- Note
1. This is for MR-RB137. For the MR-RB137, three units are used as one set (permissible regenerative power: 3900 W).
  2. P1 and P2 are connected by default. When using the power factor as improving DC reactor, connect P1 and P2 after removing the short bar across them.
  3. Connect the magnetic contactor wiring connector to CNP1 of the converter unit. If the connector is not connected, an electric shock may occur.
  4. For specifications of the cooling fan power supply, refer to "Servo Motor Instruction Manual (Vol. 3)".
  5. Use a magnetic contactor with an operation delay time (interval between current being applied to the coil until closure of contacts) of 80 ms or less. The bus voltage decreases depending on the main circuit voltage and operation pattern, which may cause the forced stop deceleration to shift to the dynamic brake deceleration. When dynamic brake deceleration is not required, slow the time to turn off the magnetic contactor.
  6. To prevent an unexpected restart of the drive unit, configure a circuit to turn off EM2 in the drive unit when the main circuit power is turned off.
  7. Use an external dynamic brake to this drive unit. Without an external dynamic brake, activation of an alarm which does not cause deceleration to a stop keeps the servo motor running in a free run state at an emergency stop, and may lead to an accident. Take as many safety measures as possible. For alarms which do not cause deceleration to a stop and wiring of the external dynamic brake, refer to "MR-CV\_/MR-CR55K\_/MR-J4-DU\_(-RJ) Instruction Manual".
  8. For the encoder cable, use of the option cable is recommended. For selecting cables, refer to "Servo Motor Instruction Manual (Vol. 3)".
  9. This diagram shows sink I/O interface. For source I/O interface, refer to "MR-CV\_/MR-CR55K\_/MR-J4-DU\_(-RJ) Instruction Manual".
  10. Install an overcurrent protection device (molded-case circuit breaker or fuse) to protect the branch circuit. (Refer to section 5.3.)
  11. When not using the STO function, attach the short-circuit connector supplied with the drive unit.
  12. Do not connect the servo motor of a wrong axis to U, V, W, or CN2 of the drive unit. Otherwise, a malfunction may occur.
  13. For connecting servo motor power wires, refer to "Servo Motor Instruction Manual (Vol. 3)".
  14. The external dynamic brake cannot be used for compliance with SEMI-F47 standard. Do not assign DB. Failure to do so will cause the drive unit to become servo-off when an instantaneous power failure occurs.
  15. The converter unit and the drive unit can be connected to the control circuit power supply (L11/L21) by daisy chain. Refer to section 5.2 for the wire size and the selection of the overcurrent protection device.

# Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU

## (3) General-purpose interface 400 V class

- Note**
1. This is a configuration for MR-RB138-4. Use three MR-RB138-4s in a set, which provides permissible regenerative power of 3900 W.
  2. When using a power factor improving DC reactor, remove the short-circuit bar between P1 and P2.
  3. Use a step-down transformer when the coil voltage of the magnetic contactor is 200 V class.
  4. Use an MR-J2HBUS\_M\_SSCNET cable as a protection coordination cable.
  5. Use an external dynamic brake to this servo amplifier. Without an external dynamic brake, the servo motor keeps running at an emergency stop in a free run state, leading to an accident. Take as many safety measures as possible in the system.

When magnetic contactor drive output is enabled (factory setting)

When magnetic contactor drive output is disabled

- Note**
1. This is for MR-RB13V-4. For the MR-RB13V-4, three units are used as one set (permissible regenerative power: 3900 W).
  2. P1 and P2 are connected by default. When using the power factor improving DC reactor, connect P1 and P2 after removing the short bar across them. Refer to section 8.6 for details.
  3. A step-down transformer is required when the coil voltage of the magnetic contactor is 200 V class.
  4. Connect the magnetic contactor wiring connector to CNP1 of the converter unit. If the connector is not connected, an electric shock may occur.
  5. For specifications of the cooling fan power supply, refer to "Servo Motor Instruction Manual (Vol. 3)".
  6. Use a magnetic contactor with an operation delay time (interval between current being applied to the coil until closure of contacts) of 80 ms or less. The bus voltage decreases depending on the main circuit voltage and operation pattern, which may cause the forced stop deceleration to shift to the dynamic brake deceleration. When dynamic brake deceleration is not required, slow the time to turn off the magnetic contactor.
  7. To prevent an unexpected restart of the drive unit, configure a circuit to turn off EM2 in the drive unit when the main circuit power is turned off.
  8. Use an external dynamic brake for the drive unit. Failure to do so will cause an accident because the servo motor does not stop immediately but coasts at an alarm occurrence for which the servo motor does not decelerate to stop. Ensure the safety in the entire equipment. For alarms for which the servo motor does not decelerate to stop, refer to chapter 6. For wiring of the external dynamic brake, refer to "MR-CV/\_MR-CR55K/\_MR-J4-DU\_(-RJ) Instruction Manual".
  9. For the encoder cable, use of the option cable is recommended. For selecting cables, refer to "Servo Motor Instruction Manual (Vol. 3)".
  10. This diagram shows sink I/O interface. For source I/O interface, refer to section "MR-CV/\_MR-CR55K/\_MR-J4-DU\_(-RJ) Instruction Manual".
  11. Install an overcurrent protection device (molded-case circuit breaker or fuse) to protect the branch circuit. (Refer to section 5.3.)
  12. When not using the STO function, attach the short-circuit connector supplied with the drive unit.
  13. Do not connect the servo motor of a wrong axis to U, V, W, or CN2 of the drive unit. Otherwise, a malfunction may occur.
  14. For connecting servo motor power wires, refer to "Servo Motor Instruction Manual (Vol. 3)".
  15. For the MR-J4-DU30K\_4(-RJ) and MR-J4-DU37K\_4(-RJ), the terminal block is TE2.
  16. The external dynamic brake cannot be used for compliance with SEMI-F47 standard. Do not assign DB. Failure to do so will cause the drive unit to become servo-off when an instantaneous power failure occurs.
  17. The converter unit and the drive unit can be connected to the control circuit power supply (L11/L21) by daisy chain. Refer to section 5.2 for the wire size and the selection of the overcurrent protection device.

# Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU

## (4) SSCNET interface 400 V class

- Note**
1. This is for MR-RB13V-4. For the MR-RB13V-4, three units are used as one set (permissible regenerative power: 3900 W).
  2. P1 and P2 are connected by default. When using the power factor improving DC reactor, connect P1 and P2 after removing the short bar across them. Refer to section 8.6 for details.
  3. A step-down transformer is required when the coil voltage of the magnetic contactor is 200 V class.
  4. Connect the magnetic contactor wiring connector to CNP1 of the converter unit. If the connector is not connected, an electric shock may occur.
  5. For specifications of the cooling fan power supply, refer to "Servo Motor Instruction Manual (Vol. 3)".
  6. Use a magnetic contactor with an operation delay time (interval between current being applied to the coil until closure of contacts) of 80 ms or less. The bus voltage decreases depending on the main circuit voltage and operation pattern, which may cause the forced stop deceleration to shift to the dynamic brake deceleration. When dynamic brake deceleration is not required, slow the time to turn off the magnetic contactor.
  7. To prevent an unexpected restart of the drive unit, configure a circuit to turn off EM2 in the drive unit when the main circuit power is turned off.
  8. Use an external dynamic brake for the drive unit. Failure to do so will cause an accident because the servo motor does not stop immediately but coasts at an alarm occurrence for which the servo motor does not decelerate to stop. Ensure the safety in the entire equipment. For alarms for which the servo motor does not decelerate to stop, refer to chapter 6. For wiring of the external dynamic brake, refer to "MR-CV\_/MR-CR55K\_/MR-J4-DU\_(-RJ) Instruction Manual".
  9. For the encoder cable, use of the option cable is recommended. For selecting cables, refer to "Servo Motor Instruction Manual (Vol. 3)".
  10. This diagram shows sink I/O interface. For source I/O interface, refer to section "MR-CV\_/MR-CR55K\_/MR-J4-DU\_(-RJ) Instruction Manual".
  11. Install an overcurrent protection device (molded-case circuit breaker or fuse) to protect the branch circuit. (Refer to section 5.3.)
  12. When not using the STO function, attach the short-circuit connector supplied with the drive unit.
  13. Do not connect the servo motor of a wrong axis to U, V, W, or CN2 of the drive unit. Otherwise, a malfunction may occur.
  14. For connecting servo motor power wires, refer to "Servo Motor Instruction Manual (Vol. 3)".
  15. For the MR-J4-DU30K\_4(-RJ) and MR-J4-DU37K\_4(-RJ), the terminal block is TE2.
  16. The external dynamic brake cannot be used for compliance with SEMI-F47 standard. Do not assign DB. Failure to do so will cause the drive unit to become servo-off when an instantaneous power failure occurs.
  17. The converter unit and the drive unit can be connected to the control circuit power supply (L11/L21) by daisy chain. Refer to section 5.2 for the wire size and the selection of the overcurrent protection device.

- Note**
1. This is for MR-RB13V-4. For the MR-RB13V-4, three units are used as one set (permissible regenerative power: 3900 W).
  2. P1 and P2 are connected by default. When using the power factor improving DC reactor, connect P1 and P2 after removing the short bar across them. Refer to section 8.6 for details.
  3. A step-down transformer is required when the coil voltage of the magnetic contactor is 200 V class.
  4. Connect the magnetic contactor wiring connector to CNP1 of the converter unit. If the connector is not connected, an electric shock may occur.
  5. For specifications of the cooling fan power supply, refer to "Servo Motor Instruction Manual (Vol. 3)".
  6. Use a magnetic contactor with an operation delay time (interval between current being applied to the coil until closure of contacts) of 80 ms or less. The bus voltage decreases depending on the main circuit voltage and operation pattern, which may cause the forced stop deceleration to shift to the dynamic brake deceleration. When dynamic brake deceleration is not required, slow the time to turn off the magnetic contactor.
  7. To prevent an unexpected restart of the drive unit, configure a circuit to turn off EM2 in the drive unit when the main circuit power is turned off.
  8. Use an external dynamic brake for the drive unit. Failure to do so will cause an accident because the servo motor does not stop immediately but coasts at an alarm occurrence for which the servo motor does not decelerate to stop. Ensure the safety in the entire equipment. For alarms for which the servo motor does not decelerate to stop, refer to chapter 6. For wiring of the external dynamic brake, refer to "MR-CV\_/MR-CR55K\_/MR-J4-DU\_(-RJ) Instruction Manual".
  9. For the encoder cable, use of the option cable is recommended. For selecting cables, refer to "Servo Motor Instruction Manual (Vol. 3)".
  10. This diagram shows sink I/O interface. For source I/O interface, refer to section "MR-CV\_/MR-CR55K\_/MR-J4-DU\_(-RJ) Instruction Manual".
  11. Install an overcurrent protection device (molded-case circuit breaker or fuse) to protect the branch circuit. (Refer to section 5.3.)
  12. When not using the STO function, attach the short-circuit connector supplied with the drive unit.
  13. Do not connect the servo motor of a wrong axis to U, V, W, or CN2 of the drive unit. Otherwise, a malfunction may occur.
  14. For connecting servo motor power wires, refer to "Servo Motor Instruction Manual (Vol. 3)".
  15. For the MR-J4-DU30K\_4(-RJ) and MR-J4-DU37K\_4(-RJ), the terminal block is TE2.
  16. The external dynamic brake cannot be used for compliance with SEMI-F47 standard. Do not assign DB. Failure to do so will cause the drive unit to become servo-off when an instantaneous power failure occurs.
  17. The converter unit and the drive unit can be connected to the control circuit power supply (L11/L21) by daisy chain. Refer to section 5.2 for the wire size and the selection of the overcurrent protection device.

### 2.2 Power-on Sequence

#### (1) MR-J2S-30 kW or more

##### (a) Power-on sequence

- 1) For the power supply wiring, make sure to use a magnetic contactor in the main circuit power supply as shown in Section 2.1.

Configure so that the magnetic contactor is turned off at the same time as an alarm is generated in the external sequence.

- 2) Turn on the control circuit power supply L11/L21 at the same time as or before turning on the main circuit power supply.

If the main circuit power supply is not turned on, a warning is displayed on the display. However, the warning disappears and operation returns to normal when the main circuit power supply is turned on.

- 3) The servo amplifier can receive SON (servo-on) signals approximately 1 s after the main circuit power supply is turned on. Therefore, if SON (servo-on) is turned on at the same time as the 3-phase power supply, the base circuit will be turned on after approximately 1 s. After approximately 20 ms, RD (Ready) is turned on and operation becomes available.

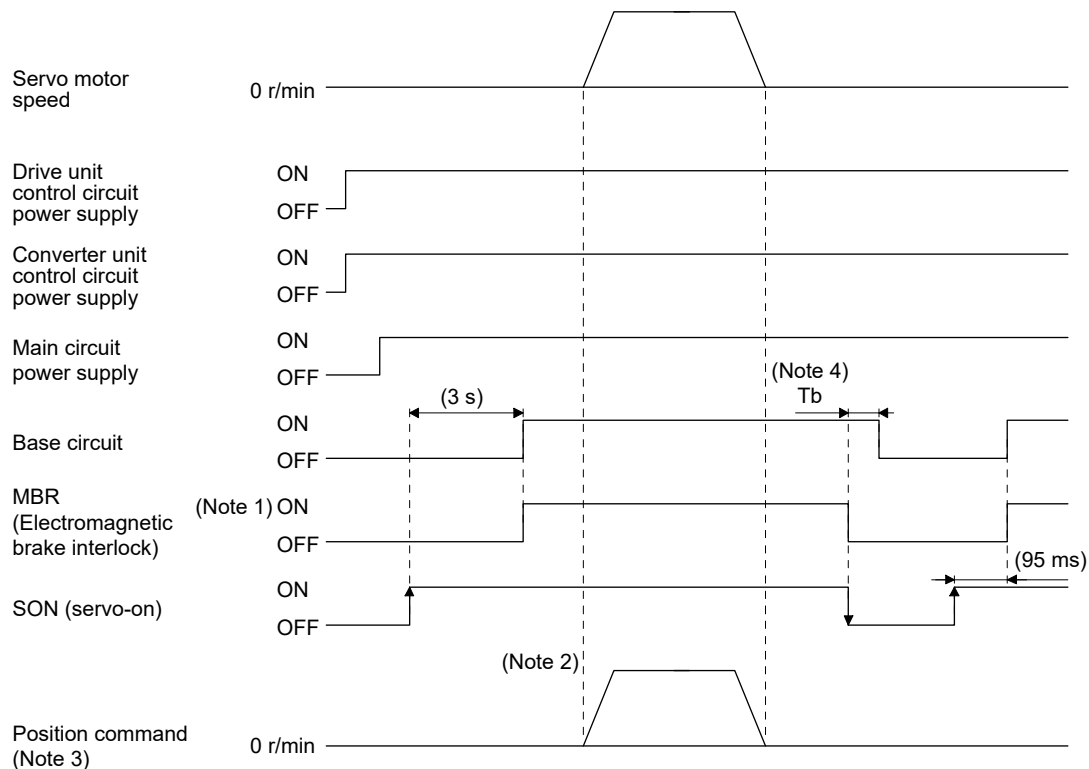

## (2) MR-J4-DU\_A\_

### (a) Power-on procedure

- 1) For the power supply wiring, make sure to use a magnetic contactor (L1/L2/L3) in the main circuit power supply as shown in Section 2.1.  
Configure so that the magnetic contactor is turned off at the same time as an alarm is generated in the external sequence.
- 2) When the magnetic contactor drive output of the converter unit is enabled, turn on simultaneously the control circuit power supply (L11/L12) of the converter unit and that of the drive unit. The main circuit power supply is turned on automatically after the converter unit and drive unit start up. When an external sequence controls the magnetic contactor, turn on the control circuit power supply (L11/L12) of the converter unit and that of the drive unit at the same time as or before turning on the main circuit power supply. If the main circuit power supply is not turned on, a warning is displayed on the drive unit display. However, the warning disappears and operation returns to normal when the main circuit power supply is turned on.

### (b) Timing chart

- Note 1. When setting up an electromagnetic brake at customer's side, make up a sequence which will operate the electromagnetic brake as follow using MBR (Electromagnetic brake interlock).  
ON: Electromagnetic brake is not activated.  
OFF: Electromagnetic brake is activated.
- Note 2. Give a position command after the external electromagnetic brake is released.
- Note 3. This is in position control mode.
- Note 4. In [Pr. PC16 Electromagnetic brake sequence output], set a delay time ( $T_b$ ) from MBR (Electromagnetic brake interlock) off to base circuit shut-off at a servo-off.

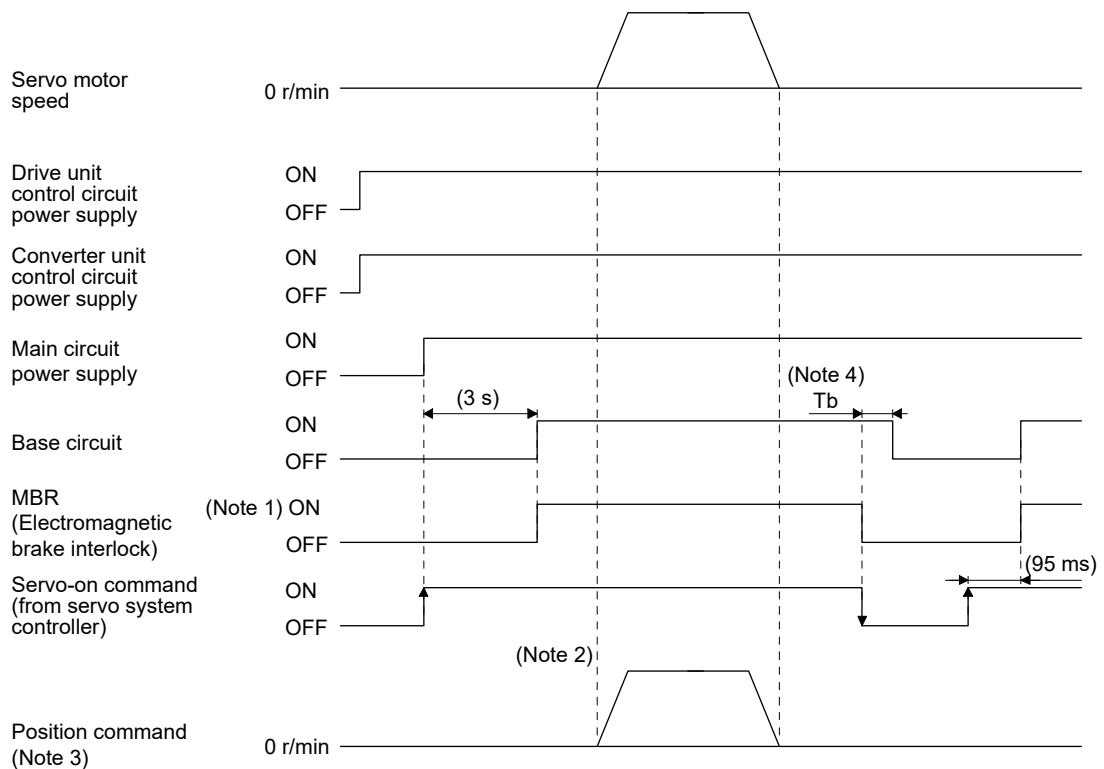

(3) MR-J4-DU\_B\_

(a) Power-on procedure

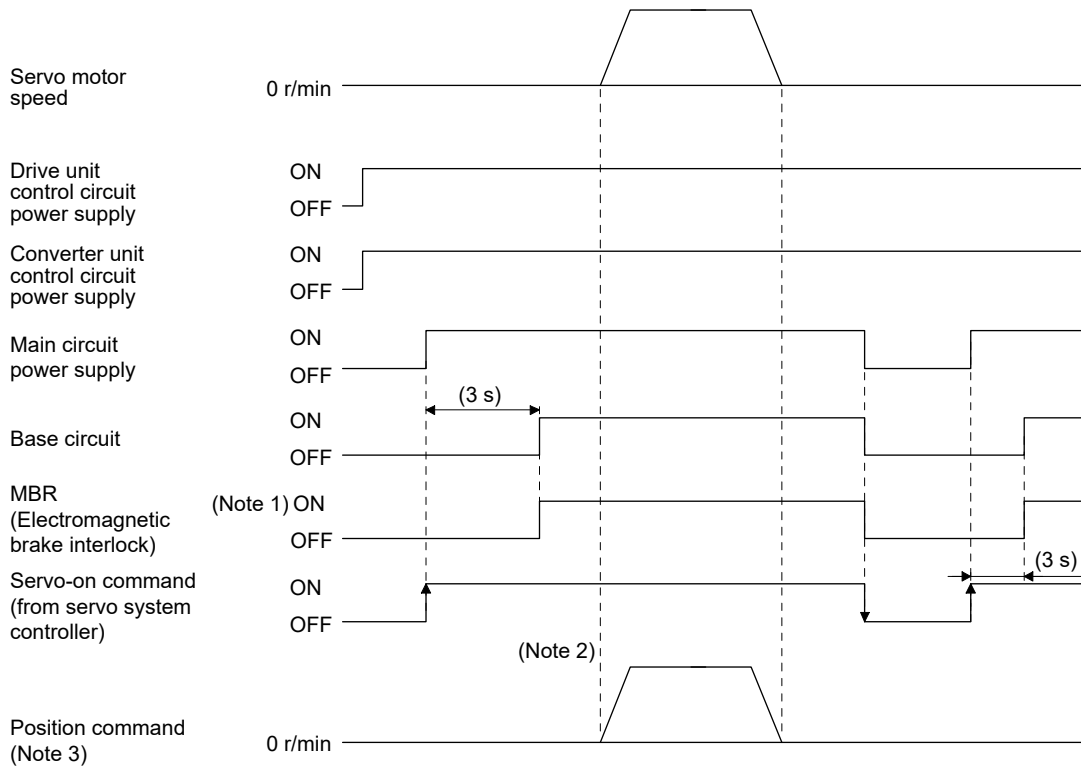

- 1) For the power supply wiring, make sure to use a magnetic contactor (L1/L2/L3) in the main circuit power supply as shown in Section 2.1.  
Configure the circuit so that the magnetic contactor is turned off at the same time as an alarm is generated in the external sequence.
- 2) Turn on the control circuit power supply (L11/L12) of the converter unit and that of the drive unit at the same time as or before turning on the main circuit power supply. If the main circuit power supply is not turned on, a warning is displayed on the drive unit display. However, the warning disappears and operation returns to normal when the main circuit power supply is turned on.

(b) Timing chart

- 1) If the magnetic contactor driving output is enabled and the ready-on is on, turning SON off does not shut off the main circuit power supply.

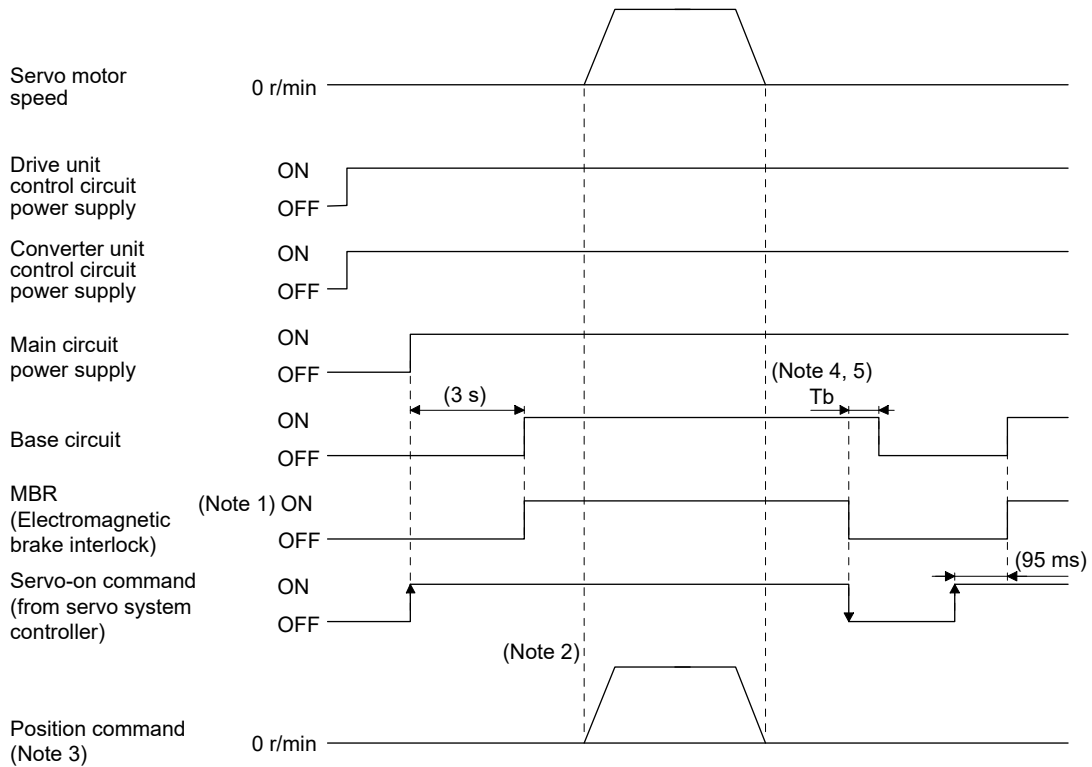

- 2) When the magnetic contactor driving output is enabled and the ready-on is turned off  
Turning off the ready-on switches off the magnetic contactor of the converter unit and shuts off the main circuit power supply.

- Note 1. When setting up an electromagnetic brake at customer's side, make up a sequence which will operate the electromagnetic brake as follow using MBR (Electromagnetic brake interlock).  
ON: Electromagnetic brake is not activated.  
OFF: Electromagnetic brake is activated.
2. Give a position command after the external electromagnetic brake is released.
3. This is in position control mode.

- 3) When the magnetic contactor driving output is off  
 When an alarm occurs, turn off the magnetic contactor by using the external sequence and shut off the main circuit power supply.

- Note 1. When setting up an electromagnetic brake at customer's side, make up a sequence which will operate the electromagnetic brake as follow using MBR (Electromagnetic brake interlock).  
 ON: Electromagnetic brake is not activated.  
 OFF: Electromagnetic brake is activated.
2. Give a position command after the external electromagnetic brake is released.
3. This is in position control mode.
4. In [Pr. PC02 Electromagnetic brake sequence output], set a delay time ( $T_b$ ) from MBR (Electromagnetic brake interlock) off to base circuit shut-off at a servo-off.
5. The base circuit remains ready-on status at servo-off. When the status is ready-off, the base circuit and the servo-on command turn off at the same time. ( $T_b = 0$ )

#### (b) List of Corresponding Connectors and Terminal Blocks

	MR-HP30K, MR-HP55KA4		MR-CR55K, MR-CR55K4	Note
①	Drive unit connector [CN5]	→	Protection coordination connector [CN40]	Must switch to a protection coordination cable (option) or prepare a new cable.
②	I/O signal connector [CN1]		I/O signal connector [CN1]	Must fabricate a new cable.
			Magnetic contactor control connector [CNP1]	Must fabricate a new cable.
③	Main circuit terminal block [TE1-1] [TE1-2]		Main circuit terminal block [TE1-1] [TE1-2]	Note
④	Control circuit terminal block [TE3]		Control circuit terminal block [TE3]	
⑤	PN terminal block [TE2-1] [TE2-2]		PN terminal block [TE2-1] [TE2-2]	

Note. The configuration of the main circuit terminal block differs depending on the capacity. Refer to "Part 7: Common Reference Material".

## Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

### (2) Drive unit (General-purpose interface)

#### (a) Connector comparison table

For the details of signals, refer to each servo amplifier instruction manual.

#### (b) List of Corresponding Connectors and Terminal Blocks

MR-J2S- A_		MR-J4-DU A_	Note
①	I/O signal connector [CN1A]	I/O signal connector [CN1]	Prepare a new cable.
②	I/O signal connector [CN1B]	Encoder connector [CN2]	Must switch to encoder cable (option) or prepare a new cable.
③	Encoder connector [CN2]	USB communication connector [CN5]	Switch to USB cable (option).
④	Communication connector [CN3]	Analog monitor connector [CN6]	Switch to monitor cable (option).
⑤	Analog monitor [CN4]	L+/L- terminal [TE2-1]	Note
⑥	PN terminal block [TE2-1] [TE2-2]	Servo motor power output terminal [TE1]	
⑦	Servo motor power supply terminal block [TE1]	Control circuit terminal L11/L21 [TE3]	
⑧	Control circuit terminal block [TE3]	Battery connector [CN4]	Prepare a new battery.
⑩	Converter unit connectors [CN5A]	Protection coordination connector [CN40A]	Must switch to a protection coordination cable (option) or prepare a new cable.
⑪	Terminal connector connector [CN5B]		

Note. The configuration of the main circuit terminal block differs depending on the capacity. Refer to "Part 7: Common Reference Material".

When not using the STO function in MR-J4- A\_, attach the short-circuit connector supplied with the servo amplifier to CN8 (STO input signal connector).

## Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

### (c) Comparison of signals

#### 1) CN1A/CN1B

Refer to Section 3.4 of "Part 2: Replacement of MR-J2S- \_A\_ with MR-J4- \_A\_".

#### 2) CN3

MR-J2S- _A_		Signal abbreviation (Note)	MR-J4- _A_	
Connector pin assignment	Connector pin No.		Connector pin No.	Connector pin assignment
	CN3-1	LG	CN3-1	
	CN3-5	RDP	CN3-3	
	CN3-9	SDP	CN3-5	
	CN3-11	LG	CN3-7	
	CN3-15	RDN	CN3-6	
	CN3-19	SDN	CN3-4	
	CN3-20	P5(P5D)	CN3-2	
	CN3-2	RXD	-	
	CN3-10	TRE	-	
	CN3-12	TXD	-	

Note. Signal abbreviations in parentheses are for MR-J4- \_A\_.

#### 3) CN4

- Note
1. "Maximum speed" and "Maximum torque" differ depending on the servo motor. Therefore, after the existing motor has been replaced with an HG motor, the output voltage for "Maximum speed" or "Maximum torque" may differ.
  2. Units used for MR-J2S-\_A\_ are different from those for MR-J4-\_A\_. Note that the input range of existing equipment needs to be adjusted.
  3. Set "0008" or "0009". When setting the value, note that the input range of existing equipment needs to be adjusted.

Note 1. Setting values with ○ are available for each mode.  
Standard: Use a rotary servo motor in the standard (semi closed loop system) mode.  
2. Encoder pulse units.

4. CHARACTERISTICS

4.1 Capacity of Power Source Facility and Generation Loss

(1) Calorific values of converter units and drive units

Table 5.1 and Table 5.2 shows heat losses at rated load and power supply capacity for a set of a converter unit and drive unit. When a servo motor runs at a speed less than its rated speed, its power supply capacity becomes less than a value in the table while its calorific value remains the same.

Since the servo motor requires 2 times to 2.5 times greater instantaneous power for acceleration, use the power supply which ensures that the voltage lies within the permissible voltage fluctuation at the main circuit power supply terminals (L1/L2/L3) of the converter unit. The power supply equipment capacity changes with the power supply impedance.

The actually generated heat falls within the ranges at rated output and at servo-off according to the frequencies of use during operation. When designing an enclosed cabinet, use the values in the table, considering the worst operating conditions. The calorific values in Table 5.1 and Table 5.2 do not include those at regeneration.

(a) MR-J2S series

Table 5.1 Power supply capacities and calorific values per axis at rated output for MR-J2S series

Servo amplifier	Converter unit	Power supply capacity [kVA]		The calorific value of a servo amplifier [W] (Note)		Required heat dissipation area [m <sup>2</sup> ]
		Power factor improving DC reactor not used	Power factor improving DC reactor used	At rated output	At zero torque	
MR-J2S-30KA/B	MR-HP30KA	48	40	1650 (1100 + 550)	60 (30 + 30)	24.1
MR-J2S-37KA/B		59	49	1850 (1300 + 550)	60 (30 + 30)	30.6
MR-J2S-30KA4/B4	MR-HP55KA4	48	40	1290 (1010 + 280)	60 (30 + 30)	24.1
MR-J2S-37KA4/B4		59	49	1650 (1310 + 342)	60 (30 + 30)	30.6
MR-J2S-45KA4/B4		71	59	1810 (1370 + 440)	60 (30 + 30)	33.5
MR-J2S-55KA4/B4		87	72	2190 (1690 + 500)	60 (30 + 30)	40.5

Note. A term on the left in ( ) is for a servo amplifier and one on the right is for a converter unit.

(b) MR-J4-DU\_

Table 5.2 Power supply capacities and calorific values at rated output for power regeneration converter unit

## Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

### 4.2 Inrush Current When Turning On the Main Circuit/Control Circuit Power Supply

POINT
● Inrush current values are changeable depending on the frequency of turning on/off the power supplies and ambient temperature.

An inrush current flow in the units at power-on. Use a molded-case circuit breaker and a magnetic contactor to protect the units from the inrush current. (Refer to Section 5.3)

When using a circuit protector, it is recommended that you use an inertia delay type which will not be tripped by the inrush current.

When the converter unit and drive unit are connected by daisy chain, the total inrush current of the both units flows in.

#### 1) MR-J2S series inrush current when turning on the main circuit/control circuit power supply

The table below shows inrush currents (references) when the maximum permissible voltage (200 V AC class: 253 V AC, 400 V AC class: 528 V AC) is applied. The power supply capacity is 2500 kVA and the wiring length is 1 m.

Converter unit	Servo amplifier	Inrush current (A <sub>0-P</sub> )	
		Main circuit power supply (L <sub>1</sub> /L <sub>2</sub> /L <sub>3</sub> )	Control circuit power supply (L <sub>11</sub> /L <sub>21</sub> )
MR-HP30KA	MR-J2S-30K_	270 A (Attenuates to approximately 20 A in 160 ms)	7 A (Attenuates to approximately 0 A in 200 ms)
	MR-J2S-37K_		
MR-HP55KA4	MR-J2S-30K_4	554 A (Attenuates to approximately 20 A in 80 ms)	15 A (Attenuates to approximately 0 A in 150 ms)
	MR-J2S-37K_4		
	MR-J2S-45K_4		
	MR-J2S-55K_4		

#### 2) MR-J4 series inrush current when turning on the main circuit/control circuit power supply

The table below shows inrush currents (references) when the maximum permissible voltage (200 V AC class: 240 V AC, 400 V AC class: 480 V AC) is applied. The power supply capacity is 2500 kVA and the wiring length is 1 m.

Converter unit	Servo amplifier	Inrush current (A <sub>0-P</sub> )	
		Main circuit power supply (L <sub>1</sub> /L <sub>2</sub> /L <sub>3</sub> )	Control circuit power supply (L <sub>11</sub> /L <sub>21</sub> )
MR-CR55K	MR-J4-DU30K_	154 A (Attenuates to approximately 20 A in 150 ms)	31 A (Attenuates to approximately 2 A in 60 ms)
	MR-J4-DU37K_		
MR-CR55K4	MR-J4-DU30K_4	305 A (Attenuates to approximately 20 A in 70 ms)	27 A (Attenuates to approximately 2 A in 45 ms)
	MR-J4-DU37K_4		
	MR-J4-DU45K_4		
	MR-J4-DU55K_4		

5. OPTIONS AND PERIPHERAL EQUIPMENT

5.1 Comparison Table of Cable Option Combinations

Cable option combinations

Application	MR-J2S series	MR-J4 series	Note
Protection coordination cable	MR-J2HBUS_M	MR-J3CDL05M	Connector shape will be changed. Cable must be changed.
Connector set	MR-J2CNS	MR-J2CN1-A	Connector shape will be changed. Cable must be changed.
Magnetic contactor wiring connector		Note	Prepare a new cable.
Digital I/O connector	MR-HP4CN1	Note	Connector shape will be changed. Cable must be changed.
Terminal connector	MR-A-TM		

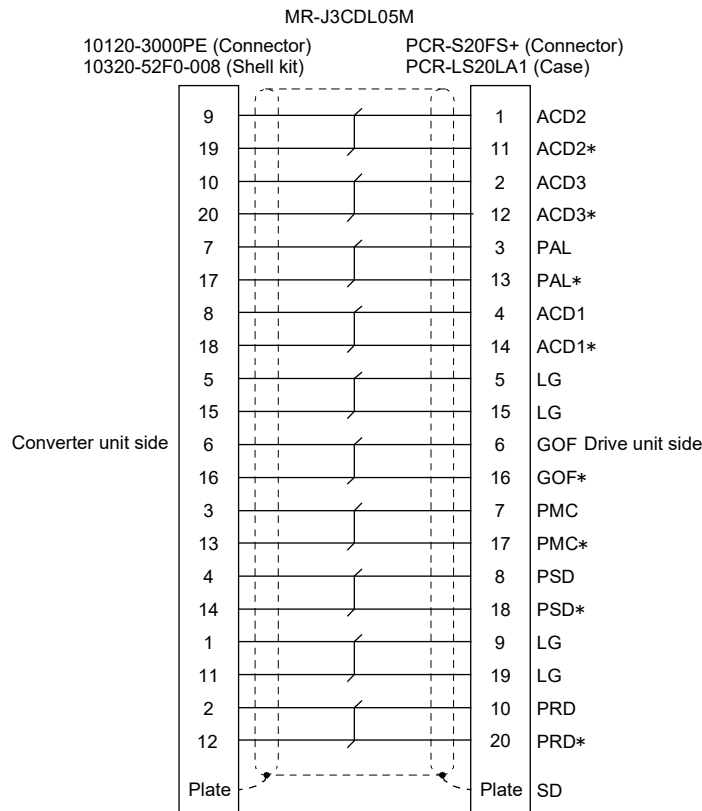

Note. Packed with a converter unit

5.1.1 MR-J3CDL05M (0.5 m) Protection Coordination Cable

	<p><b>Note</b></p>	<p>● When fabricating a protection coordination cable, do wiring correctly. Failure to do so may result in the servo motor working unexpectedly.</p>
-----------------------------------------------------------------------------------	--------------------	------------------------------------------------------------------------------------------------------------------------------------------------------

This is a cable to connect a converter unit and drive unit.

(1) Internal wiring diagram

## Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

### (2) Fabrication of a protection coordination cable

Fabricate a cable according to the internal wiring diagram of the section (1) using an MR-J2CN1-A connector set and recommended wires shown below.

Model	Length [m]	Core size [mm <sup>2</sup> ]	Number of cores	Characteristics of a core			Cable OD Cable outer diameter [mm] (Note 2)	Recommended wire type
				Configuration [wires/mm]	Conductor resistance [Ω/km]	insulator outer diameter insulator OD d [mm] (Note 1)		
MR-J3CDL05M	0.5	0.08	20 (10 pairs)	7/0.127	222 or less	0.38	6.1	UL 20276 AWG#28 10 pair (cream)

Note 1. d is as shown below.

2. This is the standard outside diameter. Although no tolerance is described, the diameter can be up to 10% larger than shown in the table.

### 5.2 Wire Selection Example

POINT
<ul style="list-style-type: none"> <li>● For wiring to comply with the IEC/EN/UL/CSA standard, refer to "MR-CV_/MR-CR55K_/MR-J4-DU_(-RJ) Instruction Manual". To comply with other standards, use wires compliant with each standard.</li> <li>● Selection conditions of wire size is as follows.                      Wiring condition: In-air, one-row wiring                      Wiring length: 30 m or lower (MR-J2S series)                      50 m or lower (MR-J4 series)</li> </ul>

POINT
<ul style="list-style-type: none"> <li>● If using the existing cables, refer to "[Appendix 2] Introduction to Renewal Tool".</li> </ul>

# Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU

## 5.2.1 MR-J2S-series power supply wire size

The following diagram shows the wires used for wiring. Use the wires or equivalent given in this section.

In this case, the power supply wire used is a 600 V plastic one and the wiring distance is 30 m or less. When the wiring distance exceeds 30 m, select another wire size in consideration of the voltage drop. The alphabet letters (a, b, c) on the table correspond to crimp terminals used when wiring a servo amplifier. The method of wiring a servo motor differs depending on the type and capacity of the servo motor. To comply with the UL/cUL (CSA) standard, use UL-approved copper wires rated at 60 °C or higher for wiring.

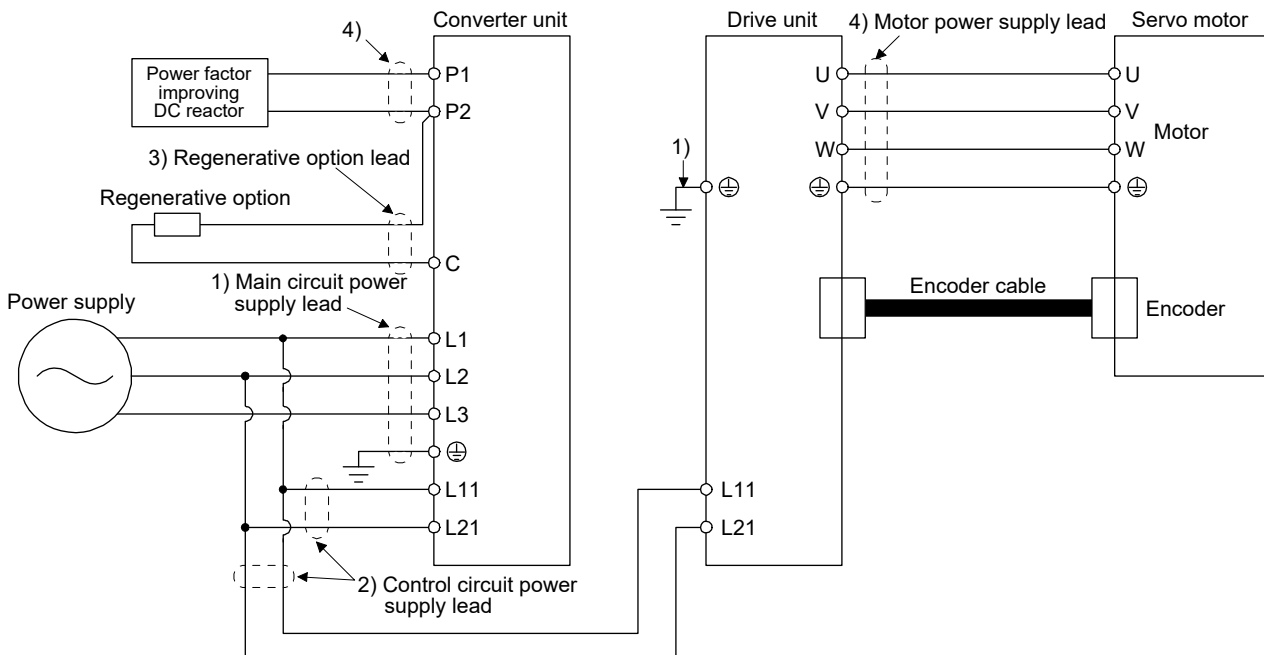

Wire size selection example 1 (IV wire)  
Recommended wire

Converter unit	Drive unit	Wire [mm <sup>2</sup> ]					
		1) L <sub>1</sub> /L <sub>2</sub> /L <sub>3</sub> /⊕	2) L <sub>11</sub> /L <sub>21</sub>	3) U/V/W P1/P2/⊕	4) P/C	5) OHS1/OHS2	6) BU/BV/BW
MR-HP30KA	MR-J2S-30KA/B	50 (AWG1/0)	2 (AWG14)	60 (AWG2/0)	5.5 (AWG10)	1.25 (AWG16)	1.25 (AWG16)

MR-HP55KA4	MR-J2S-30KA4/B4	22 (AWG4)		30 (AWG2)			
	MR-J2S-37KA4/B4	30 (AWG2)		38 (AWG2)			
	MR-J2S-45KA4/B4	38 (AWG2)		50 (AWG1/0)			
	MR-J2S-55KA4/B4	50 (AWG1/0)		60 (AWG2/0)			

# Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

## 5.2.2 MR-J4-series, power supply wire size

The following diagram shows the wires used for wiring. Use the wires given in this section or equivalent.

### (1) Example of selecting the wire sizes

For the power supply wire, use a 600 V grade heat-resistant polyvinyl chloride insulated wire (HIV wire). The table below shows selection examples of power supply wire sizes.

Wire size selection example (HIV wire)  
Recommended wire

Converter unit (Note 2)	Drive unit (Note 2)	Wire [mm <sup>2</sup> ] (Note1, 3)			
		1) L1/L2/L3/⊕	2) L11/L21	3) P2/C	4) U/V/W P1/P2/⊕
MR-CR55K	MR-J4-DU30K_	38 (AWG2): c	1.25 to 2 (AWG 16 to 14): g (Note 4)	5.5 (AWG10): a	60 (AWG2/0): d
	MR-J4-DU37K_	60 (AWG2/0): d			60 (AWG2/0): d
MR-CR55K4	MR-J4-DU30K_4	22 (AWG4): e			22 (AWG4): e
	MR-J4-DU37K_4	22 (AWG4): e			38 (AWG 2): f
	MR-J4-DU45K_4	38 (AWG2): c	38 (AWG2): c		
	MR-J4-DU55K_4	38 (AWG2): c	38 (AWG2): c		

- Note
1. Alphabets in the table indicate crimping tools. For crimp terminals and applicable tools, refer to (2) of this section.
  2. To connect these wires to a terminal block, make sure to use the screws that come with the terminal block.
  3. Selected based on the servo motor with the largest rated current of all the servo motors available.
  4. To comply with the IEC/EN/UL/CSA standard, use a wire of 2 mm<sup>2</sup>.

## Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

### (2) Selection example of crimp terminals

The table below shows selection examples of crimp terminals for a terminal block of a drive unit or converter unit when the wires described in (1) of this section are used.

Symbol	Drive unit/converter unit side crimp terminal				Manufacturer
	Crimp terminal (Note 2)	Applicable tool			
		Body	Head	Dice	
a	FVD5.5-10	YNT-1210S			JST
b	FVD22-10	YF-1 E-4	YNE-38	DH-123 DH-113	
c (Note 1)	R38-10	YPT-60-21		TD-124	
		YF-1 E-4	YET-60-1	TD-112	
d (Note 1)	R60-10	YPT-60-21		TD-125	
		YF-1 E-4	YET-60-1	TD-113	
e	FVD22-8	YF-1 E-4	YNE-38	DH-123 DH-113	
f (Note 1)	R38-8	YPT-60-21		TD-124	
		YF-1 E-4	YET-60-1	TD-112	
g	FVD2-4	YNT-1614			

Note 1. Cover the crimped portion with an insulating tape.

Note 2. Installation of a crimp terminal may be impossible depending on the size, so make sure to use the recommended crimp terminal or one equivalent to it.

## Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

### 5.3 Selection of No-Fuse Breakers, Fuses, and Magnetic Contactors (example)

#### 5.3.1 MR-J2S-series, no-fuse breakers and magnetic contactors (recommended)

Always use one molded-case circuit breaker/one magnetic contactor with one servo amplifier.

Servo amplifier	Converter unit	Molded-case circuit breaker			Magnetic contactor
		Current		Voltage AC	
		Power factor improving DC reactor not used	Power factor improving DC reactor used		
MR-J2S-30KA/B	MR-HP30KA	400 A frame 250 A	225 A frame 225 A	240 V	S-N150
MR-J2S-37KA/B		400 A frame 300 A	400 A frame 300 A		S-N180
MR-J2S-30KA4/B4	MR-HP55KA4	225 A frame 150 A	225 A frame 125 A	600Y/ 347 V	S-N95
MR-J2S-37KA4/B4		225 A frame 175 A	225 A frame 150 A		S-N125
MR-J2S-45KA4/B4		225 A frame 225 A	225 A frame 175 A		S-N150
MR-J2S-55KA4/B4		400 A frame 250 A	225 A frame 225 A		S-N180

#### 5.3.2 MR-J4-series, no-fuse breakers, fuses, and magnetic contactors (recommended)

##### (1) For main circuit power supply

Always use one molded-case circuit breaker and one magnetic contactor with one converter unit. When using a fuse instead of the molded-case circuit breaker, use the one having the specifications given in this section.

Converter unit	Drive unit	Molded-case circuit breaker (Note 1)			Fuse			Magnetic contactor (Note 2)
		Frame, rated current		Voltage AC [V]	Class	Current [A]	Voltage AC [V]	
		Power factor improving DC reactor not used	Power factor improving DC reactor used					
MR-CR55K	MR-J4-DU30K_	225 A frame 175 A	225 A frame 150 A	240	T	300	300	S-N150
	MR-J4-DU37K_	225 A frame 225 A	225 A frame 175 A			400		S-N180
MR-CR55K4	MR-J4-DU30K_4	100 A frame 100 A	100 A frame 80 A	480	T	175	600	S-N65
	MR-J4-DU37K_4	125 A frame 125 A	100 A frame 100 A			200		S-N80
	MR-J4-DU45K_4	225 A frame 150 A	125 A frame 125 A			300		S-N95
	MR-J4-DU55K_4	225 A frame 175 A	225 A frame 150 A			300		S-N150

Note 1. To comply with the IEC/EN/UL/CSA standard, refer to App. 2.

2. Use a magnetic contactor with an operation delay time (interval between current being applied to the coil until closure of contacts) of 80 ms or less.

## Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

### (2) For control circuit power supply

When the wiring for the control circuit power supply (L11, L21) is thinner than that for the main circuit power supply (L1, L2, L3), install an overcurrent protection device (molded-case circuit breaker or fuse) to protect the branch circuit.

#### (a) Converter unit

Converter unit	Molded-case circuit breaker (Note)		Fuse (Class T)		Fuse (Class K5)	
	Frame, rated current	Voltage AC [V]	Current [A]	Voltage AC [V]	Current [A]	Voltage AC [V]
MR-CR55K	30 A frame 5 A	240	1	300	1	250
MR-CR55K4	30 A frame 5 A	480	1	600	1	600

Note. To make a converter unit comply with the IEC/EN/UL/CSA standard, refer to App. 2.

#### (b) Drive unit

Drive unit	Molded-case circuit breaker (Note)		Fuse (Class T)		Fuse (Class K5)	
	Frame, rated current	Voltage AC [V]	Current [A]	Voltage AC [V]	Current [A]	Voltage AC [V]
MR-J4-DU30K_	30 A frame 5 A	240	1	300	1	250
MR-J4-DU37K_						
MR-J4-DU30K_4	30 A frame 5 A	480	1	600	1	600
MR-J4-DU37K_4						
MR-J4-DU45K_4						
MR-J4-DU55K_4						

Note. To make a drive unit comply with the IEC/EN/UL/CSA standard, refer to App. 2.

5.4 FR-BU2-(H) Brake Unit

POINT						
<ul style="list-style-type: none"> <li>● In torque control mode, EM2 signals of a drive unit are the same as its EM1 signals.</li> <li>● Use a 200 V class brake unit and resistor unit for a 200 V class converter unit as well as a 400 V class brake unit and resistor unit for a 400 V class converter unit. Do not use different voltage class units together.</li> <li>● Do not install a brake unit or resistor unit horizontally or obliquely, otherwise their heat dissipation effect will deteriorate. Make sure to install them vertically.</li> <li>● The temperature of resistor unit case rises up to 100 °C or more. Make sure that any wires or flammables do not come in contact with the case.</li> <li>● Use a brake unit in ambient temperature of -10 to 50 °C. Note that the ambient temperature for brake units is different from that for converter units (0 to 55 °C).</li> <li>● Configure the circuit in such a way that when a malfunction occurs, the power supply is shut off by using an alarm output from a brake unit or resistor unit.</li> <li>● Use a brake unit in combination with other units as described in Section 5.4.1.</li> <li>● A brake unit and a regenerative option (regenerative resistors) cannot be used together.</li> <li>● When using a brake unit, set parameters as described in the table below.</li> </ul>						
<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 60%;">Parameter</th> <th style="width: 40%;">Setting value</th> </tr> </thead> <tbody> <tr> <td>[Pr. PA01] of converter units</td> <td style="text-align: center;">__ 0 0 (initial value)</td> </tr> <tr> <td>[Pr. PA02] of drive units</td> <td style="text-align: center;">__ 0 1</td> </tr> </tbody> </table>	Parameter	Setting value	[Pr. PA01] of converter units	__ 0 0 (initial value)	[Pr. PA02] of drive units	__ 0 1
Parameter	Setting value					
[Pr. PA01] of converter units	__ 0 0 (initial value)					
[Pr. PA02] of drive units	__ 0 1					

Connect a brake unit to the buses of a converter unit (between L+ and L- of TE2-1). Brake units regenerate larger power than MR-RB regenerative options. Brake units are used when there is insufficient regenerative ability in regenerative options.

When using a brake unit, make sure to refer to the "FR-BU2 Instruction Manual".

5.4.1 Selection

Use a converter unit, a brake unit, and a resistor unit in the combination described in the table below.

Brake unit		Resistor unit	Number of connected units	Permissible continuous power [kW]	Resultant resistance [Ω]	Converter unit
200 V class	FR-BU2-55K	FR-BR-55K	2 (in parallel)	7.82	1	MR-CR55K
		MT-BR5-55K	2 (in parallel)	11.0	1	
400 V class	FR-BU2-H55K	FR-BR-H55K	2 (in parallel)	7.82	4	MR-CR55K4
	FR-BU2-H75K	MT-BR5-H75K	2 (in parallel)	15.0	3.25	

## Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

### 5.4.2 Parameter setting of brake units

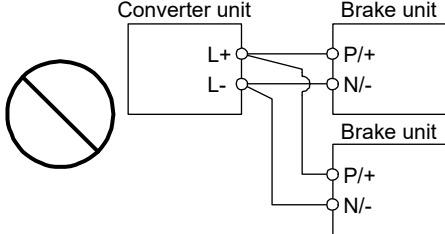

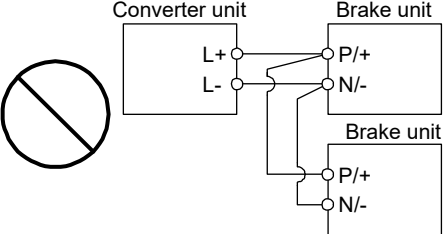

Normally, it is unnecessary to change the FR-BU2-(H) parameters. The table below shows permission for changing each parameter.

Parameter		Permission	Remarks
Number	Name		
0	Brake mode switching	NO	Do not change the setting.
1	Monitor display data selection	Available	Refer to the "FR-BU2 installation guide".
2	Input terminal function selection 1	NO	Do not change the setting.
3	Input terminal function selection 2		
77	Parameter write selection		
78	Cumulative energization time carrying-over times		
CLr	Parameter clear		
ECL	Alarm history clear		
C1	For manufacturer setting		

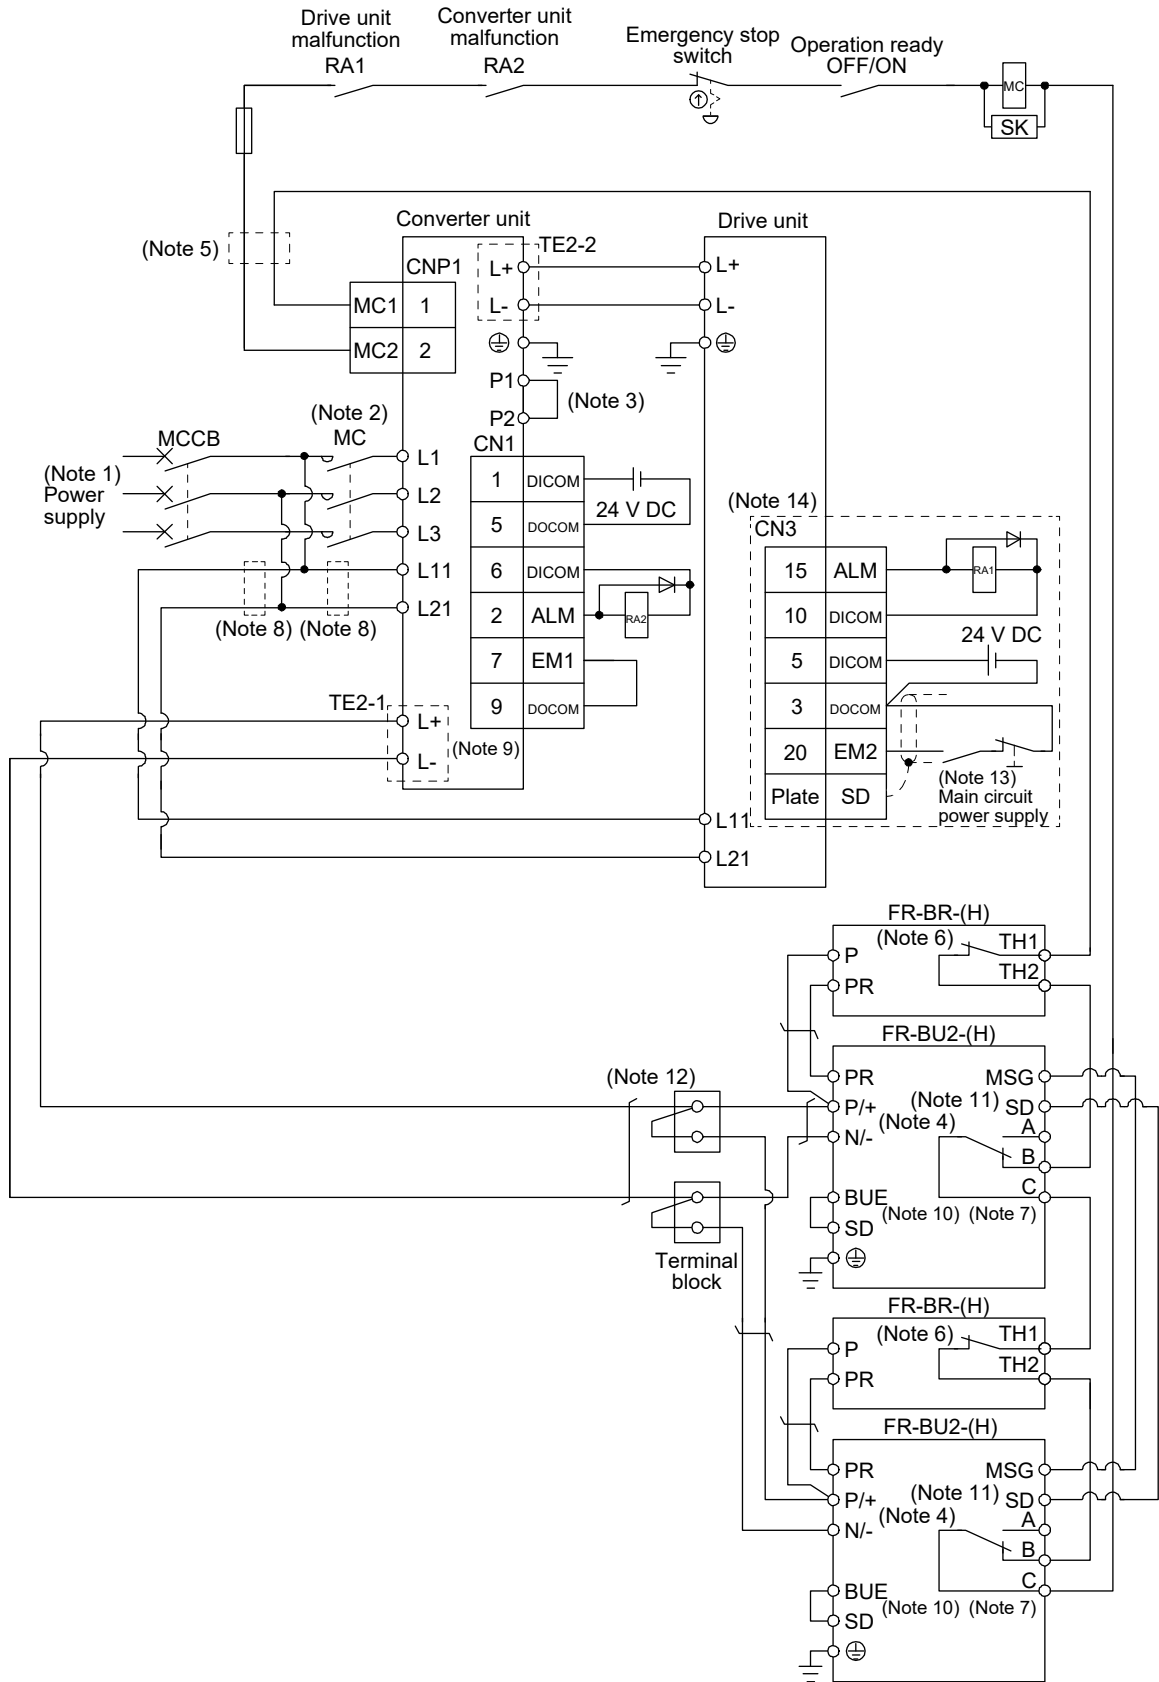

### 5.4.3 Connection example

POINT
<ul style="list-style-type: none"> <li>● Connecting the PR terminal of a brake unit to the L+ terminal of a converter unit will cause a malfunction to the brake unit. Make sure to connect the PR terminal of a brake unit to that of a resistor unit.</li> </ul>

#### (1) Use of the FR-BR-(H) resistor unit

POINT	
<ul style="list-style-type: none"> <li>● When connecting two brake units in parallel, use FR-BU2-(H) for both. Otherwise an alarm or malfunction may occur.</li> <li>● Make sure to connect the master and slave terminals (MSG, SD) of one brake unit to the master and the slave of the other respectively.</li> <li>● Do not connect as shown below.</li> </ul>	
	
Connecting multiple brake units together to L+ and L-.	Connecting multiple brake units by daisy chain.

(a) When the magnetic contactor drive output is enabled

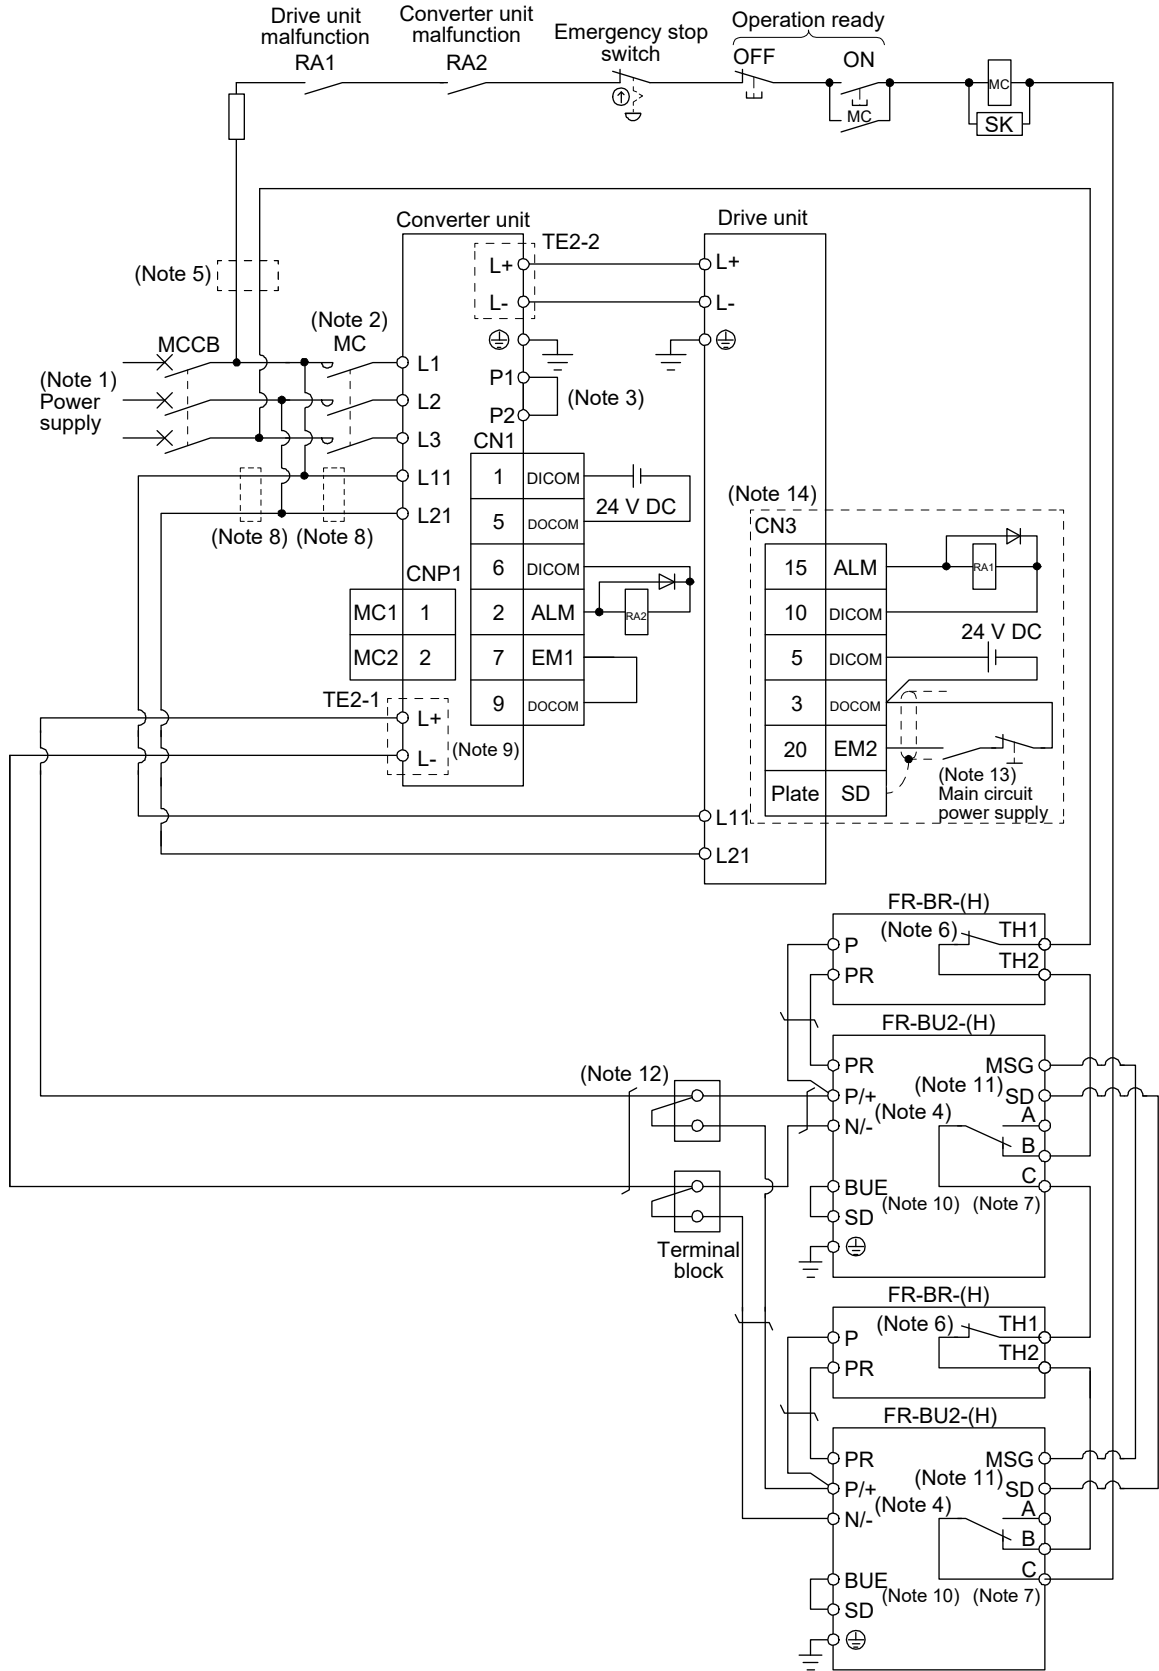

## Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

---

- Note
1. For the power supply specifications, refer to Part 7 "Common Reference Material".
  2. Use a magnetic contactor with an operation delay time (interval between current being applied to the coil until closure of contacts) of 80 ms or less. Bus voltage decreases according to the voltage and operation pattern of the main circuit, and there may be a shift in dynamic brake deceleration during forced stop deceleration. If dynamic brake deceleration is not desired, delay the time to turn off the electromagnetic contactor.
  3. P1 and P2 are connected in factory. When using the power factor improving DC reactor, remove the short-circuit bar across P1 and P2 before connecting the reactor. For details, refer to Chapter 7 in Part 9.
  4. Make sure that the connection destinations of the P/+ terminal and N/- terminal of a brake unit are correct. Otherwise a malfunction will occur to a converter unit or brake unit.
  5. For 400 V class, use a step-down transformer.
  6. Contact rating: 1b normally closed contact, 5 A at 110 V AC/3 A at 220 V AC  
Normal: TH1 and TH2 are connected. Abnormal: TH1 and TH2 are disconnected.
  7. Contact rating: 230 V AC\_0.3 A/30 V DC\_0.3 A  
Normal: B and C are connected/A and C are disconnected. Abnormal: B and C are disconnected/A and C are connected.
  8. Install an overcurrent protection device (molded-case circuit breaker or fuse) to protect the branch circuit. (Refer to Section 5.3 in Part 5.)
  9. Do not connect multiple wires directly to L+ and L- terminals of TE2-1 of a converter unit.
  10. Make sure to connect between BUE and SD. (Wired in factory.)
  11. Make sure that the connection destinations of MSG terminal and SD terminal of a brake unit are correct. Otherwise a malfunction will occur to a converter unit or brake unit.
  12. Connect L+ and L- terminals of TE2-1 of a converter unit to terminal blocks by using wires described in (4) of this section.
  13. In order to prevent unexpected restarting of the drive unit, configure the circuit so that EM2 is also turned off when the main circuit power supply is turned off.
  14. This wiring diagram is for MR-J4-DU\_B\_. The way to interface MR-J4-DU\_ is the same as MR-J4-\_. Refer to each servo amplifier instruction manual.

(b) When the magnetic contactor drive output is disabled

## Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

---

- Note
1. For the power supply specifications, refer to Part 7 "Common Reference Material".
  2. Use a magnetic contactor with an operation delay time (interval between current being applied to the coil until closure of contacts) of 80 ms or less. Bus voltage decreases according to the voltage and operation pattern of the main circuit, and there may be a shift in dynamic brake deceleration during forced stop deceleration. If dynamic brake deceleration is not desired, delay the time to turn off the electromagnetic contactor.
  3. P1 and P2 are connected in factory. When using the power factor improving DC reactor, remove the short-circuit bar across P1 and P2 before connecting the reactor. For details, refer to Chapter 7 in Part 9.
  4. Make sure that the connection destinations of the P/+ terminal and N/- terminal of a brake unit are correct. Otherwise a malfunction will occur to a converter unit or brake unit.
  5. For 400 V class, use a step-down transformer.
  6. Contact rating: 1b normally closed contact, 5 A at 110 V AC/ 3 A at 220 V AC  
Normal: TH1 and TH2 are connected. Abnormal: TH1 and TH2 are disconnected.
  7. Contact rating: 230 V AC\_0.3 A/30 V DC\_0.3 A  
Normal: B and C are connected/A and C are disconnected. Abnormal: B and C are disconnected/A and C are connected.
  8. Install an overcurrent protection device (molded-case circuit breaker or fuse) to protect the branch circuit. (Refer to Section 5.3 in Part 5.)
  9. Do not connect multiple wires directly to L+ and L- terminals of TE2-1 of a converter unit.
  10. Make sure to connect between BUE and SD. (Wired in factory.)
  11. Make sure that the connection destinations of MSG terminal and SD terminal of a brake unit are correct. Otherwise a malfunction will occur to a converter unit or brake unit.
  12. Connect L+ and L- terminals of TE2-1 of a converter unit to terminal blocks by using wires described in (4) of this section.
  13. In order to prevent unexpected restarting of the drive unit, configure the circuit so that EM2 is also turned off when the main circuit power supply is turned off.
  14. This wiring diagram is for MR-J4-DU\_B\_. The way to interface MR-J4-DU\_ is the same as MR-J4-\_. Refer to each servo amplifier instruction manual.

  14. This wiring diagram is for MR-J4-DU\_B\_. The way to interface MR-J4-DU\_ is the same as MR-J4-\_. Refer to each servo amplifier instruction manual.

# Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

## (3) Wiring precautions

Use as short wires as possible between a converter unit and brake unit and between a resistor unit and a brake unit. If using a wire of 5 m or longer, be sure to use a twist wire (with 5 or more twists in 1 m). Make sure that a wire is 10 m or shorter even when it is a twisted wire. If a wire of 5 m or longer is not a twisted wire, or if a wire is a twisted wire and longer than 10 m, a malfunction may occur to a brake unit.

## (4) Wires

### (a) Wires for brake units

HIV wire (600 V grade heat-resistant polyvinyl chloride insulated wire) is recommended for use in brake units.

#### 1) Main circuit terminals

Terminal block

Brake unit		Main circuit terminal screw size	Crimp terminal N/-, P/+, PR, ⊕	Tightening torque [N·m]	Cable gauge	
					N/-, P/+, PR, ⊕	
					HIV wire [mm <sup>2</sup> ]	AWG
200 V class	FR-BU2-55K	M6	14-6	4.4	14	6
	FR-BU2-H55K	M5	5.5-5	2.5	5.5	10
400 V class	FR-BU2-H75K	M6	14-6	4.4	14	6

#### 2) Control circuit terminal

<b>POINT</b>
<ul style="list-style-type: none"> <li>● Fix a screw tightly otherwise the wire may come off or a malfunction may occur. Fixing a screw too tightly can damage the screw or brake unit, resulting in a short circuit or malfunction.</li> </ul>

Terminal block

Do wiring with the stripped cable twisted to prevent it from becoming loose. Do not solder it.

Screw size: M3

Tightening torque: 0.5 N·m to 0.6 N·m

Cable gauge: 0.3 mm<sup>2</sup> to 0.75 mm<sup>2</sup>

Driver: Small-size slotted screw driver

(Blade thickness: 0.4 mm/Blade width: 2.5 mm)

## Part 5: Review on Replacement of MR-J2S-30 kW or Higher Capacity Models with MR-J4-DU\_

(b) Wires between a converter unit and terminal blocks when two brake units are used.

Brake unit		Cable gauge	
		HIV wire [mm <sup>2</sup> ]	AWG
200 V class	FR-BU2-55K	38	2
400 V class	FR-BU2-H55K	14	6
	FR-BU2-H75K	38	2

(5) Crimp terminals for L+ and L- terminals of TE2-1 of a converter unit.

(a) Recommended crimp terminals

POINT
● Installation of a crimp terminal may be impossible depending on the size, so make sure to use the recommended crimp terminal or one equivalent to it.

Converter unit		Brake unit	Connectable units	Crimp terminal (manufacturer)	Applicable tool (Note 1)
200 V class	MR-CR55K	FR-BU2-55K	2	38-S6 (JST) (Note 2) R38-6S (NICHIFU) (Note 2)	a
400 V class	MR-CR55K4	FR-BU2-H55K	2	FVD14-6 (JST)	b
		FR-BU2-H75K	2	38-S6 (JST) (Note 2) R38-6S (NICHIFU) (Note 2)	a

Note 1. Symbols in the "Applicable tool" column indicate applicable tools described in (b) of this section (5).  
2. Coat the crimping part with an insulation tube.

(b) Applicable tool

Symbol	Converter unit side crimp terminal				
	Crimp terminal	Applicable tool			Manufacturer
		Body	Head	Dice	
a	38-S6	YPT-60-21	YET-60-1	TD-124	JST
		YF-1 E-4		TD-112	
b	FDV14-6	NOP60 NOM60	YNE-38	DH-112	JST
		YF-1 E-4		DH-122

# Part 6: Review on Replacement of MR-J2M with MR-J4

## Part 6: Review on Replacement of MR-J2M with MR-J4

### 1. SUMMARY

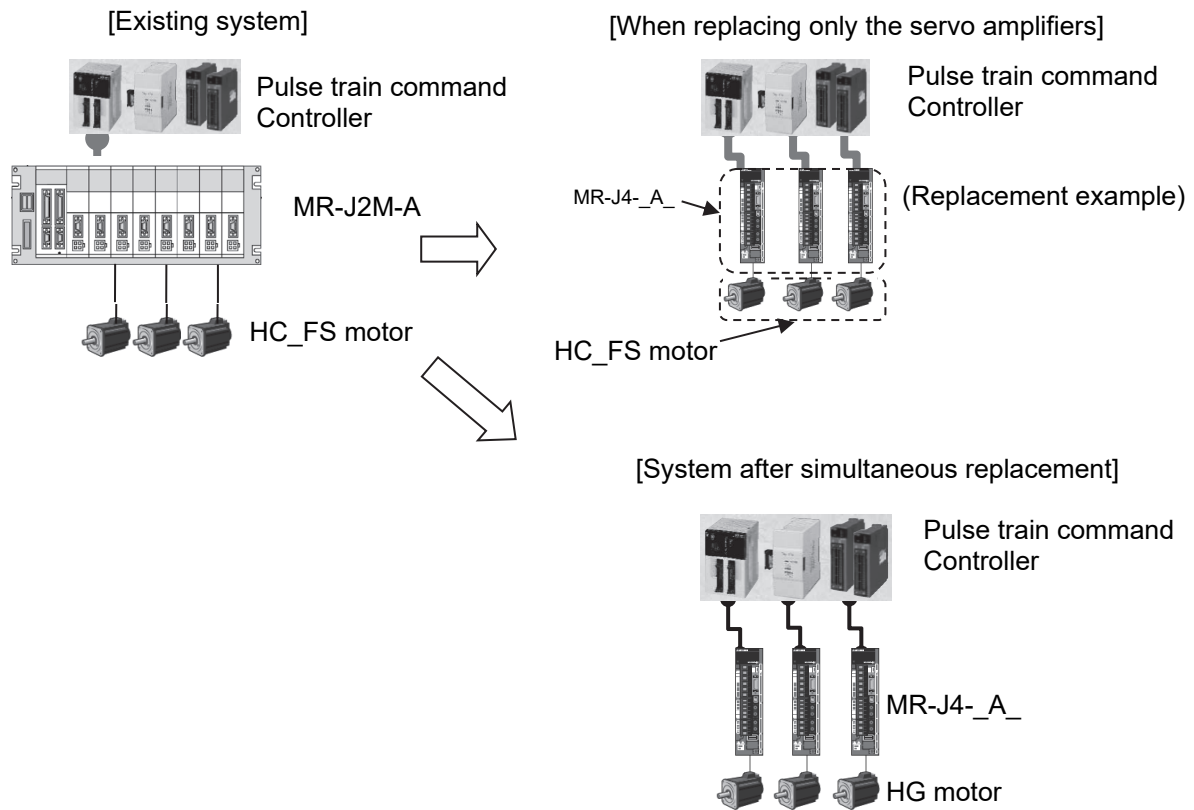

This document describes the changes that are applied to when replacing a system using the MR-J2M series with a system using the MR-J4 series. The functions and performance of the MR-J4 series are greatly improved from the MR-J2M series. Mounting dimensions of the both series are significantly different. For the details of the differences, refer to the descriptions in this document.

### 2. CASE STUDY ON REPLACEMENT OF MR-J2M

#### 2.1 Replacement Method

##### (1) Simultaneous replacement with MR-J4-\_A\_ and an HG motor

The currently used connectors or cables need to be replaced. The existing cables cannot be used as they are.

#### 2.2 Equipment Configuration

The models for replacement of both the servo amplifier and servo motor as a set are shown.

Series	Model			Replacement model (example)	Mounting compatibility (O: Compatible)
	Base unit	Interface unit	Drive Unit		
200 V AC General-purpose interface	MR-J2M-BU_	MR-J2M-P8A	MR-J2M-10DU	MR-J4-10A	Note
			MR-J2M-20DU	MR-J4-20A	Note
			MR-J2M-40DU	MR-J4-40A	Note
			MR-J2M-70DU	MR-J4-70A	Note
200 V AC SSCNET interface	MR-J2M-BU_	MR-J2M-P8B	MR-J2M-10DU	MR-J4-10B	Note
			MR-J2M-20DU	MR-J4-20B	Note
			MR-J2M-40DU	MR-J4-40B	Note
			MR-J2M-70DU	MR-J4-70B	Note

Note. These replacement models do not have compatibility in mounting.

## Part 6: Review on Replacement of MR-J2M with MR-J4

### 3. DIFFERENCES BETWEEN MR-J2M-A AND MR-J4- \_A\_

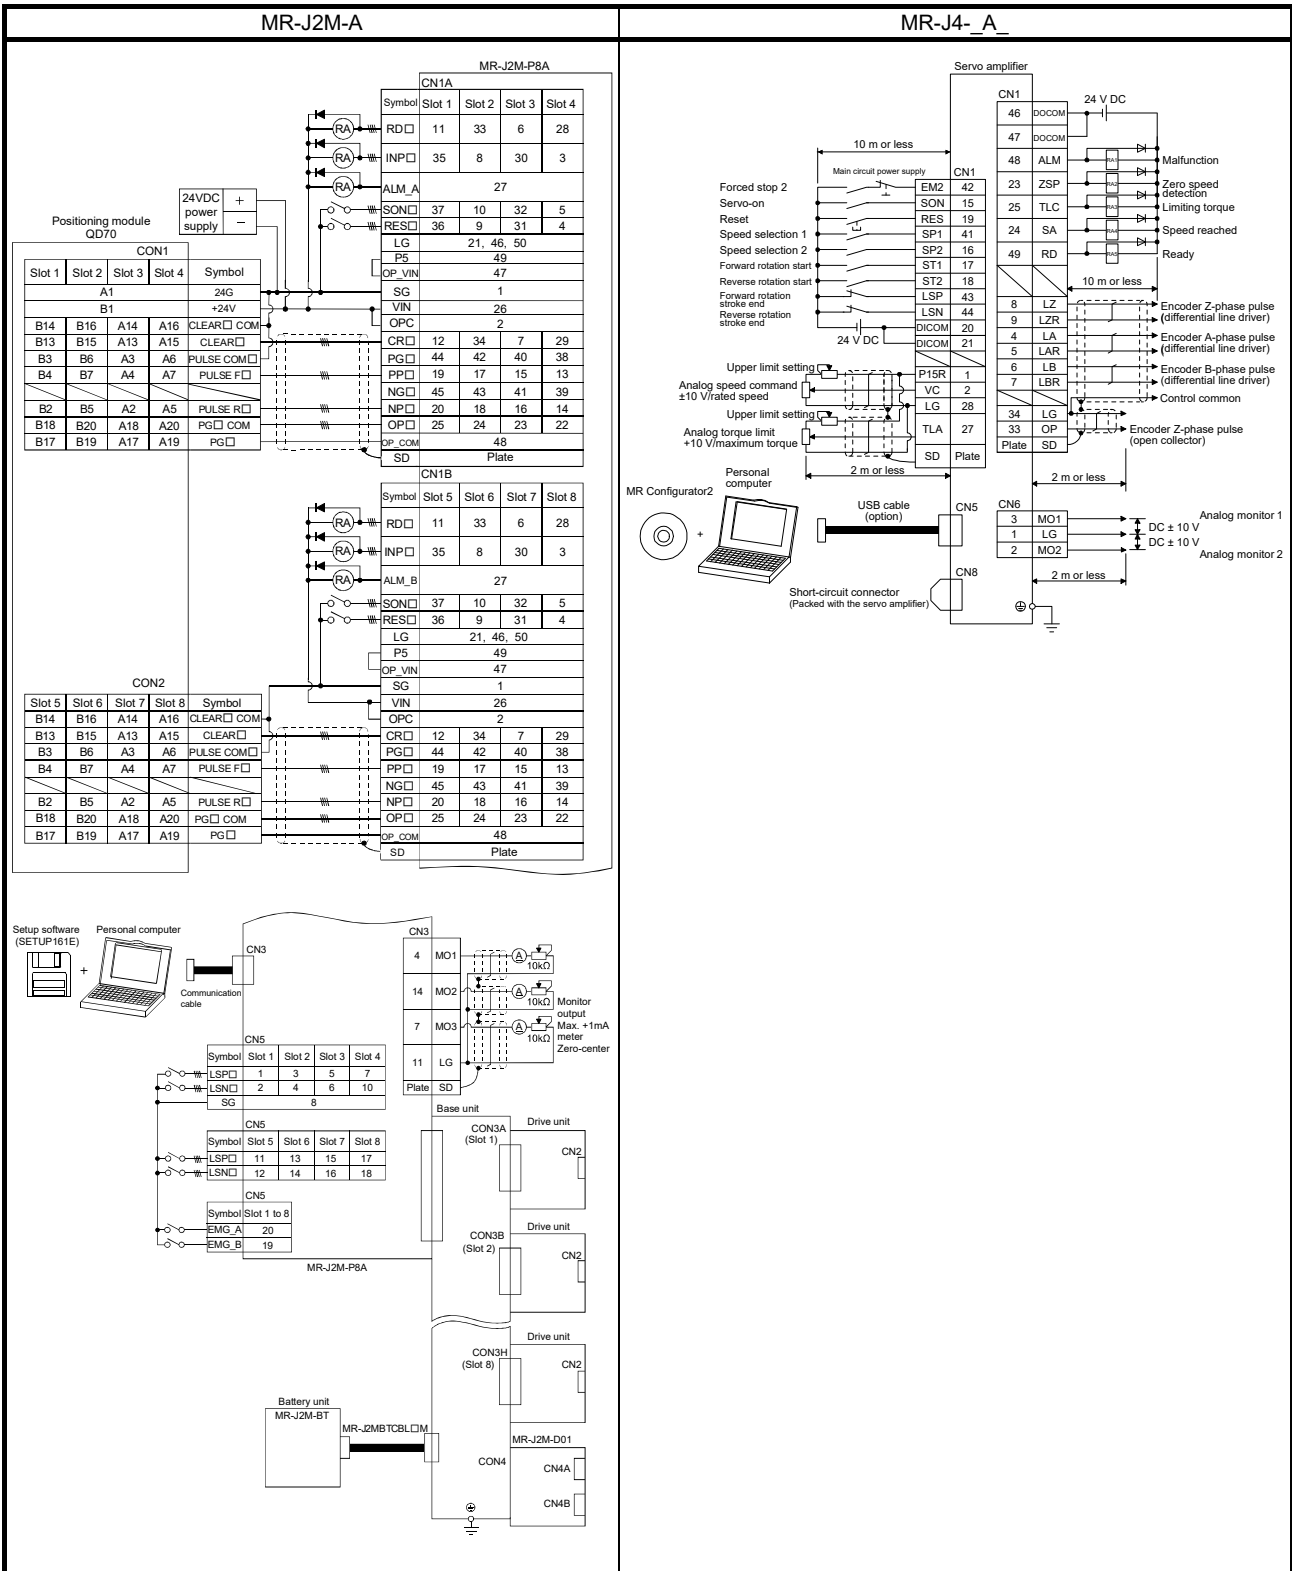

#### 3.1 Function Comparison Table

##### 3.1.1 General

Item	MR-J2M series	MR-J4 series	Reference document/items	
1	Regenerative resistor	External option	Built-in (200 W or more)	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 11.2
2	Dynamic brake	Built-in	Built-in (Coasting distance is different.)	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 11.3
3	Control circuit power	1-phase 200 V AC to 230 V AC	1-phase 200 V AC to 240 V AC	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 1.3
4	Main circuit power	1-phase/3-phase 200 V AC to 230 V AC 3-phase 200 V AC to 230 V AC	1-phase/3-phase 200 V AC to 240 V AC 3-phase 200 V AC to 240 V AC	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 1.3
5	24 V DC power supply	External supply required	External supply required	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 3.5.4
6	Auto Tuning	Real-time auto tuning: 15 steps	Real-time auto tuning: 40 steps Advanced gain search (available in the future) One-touch tuning	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 6.3
7	Control mode	• Position control mode (pulse command)	• Position control mode (pulse command) • Speed control mode (analog command) • Torque control mode (analog command)	MR-J4- _A_ Servo Amplifier Instruction Manual
8	Maximum input pulses	Differential pulse 500 kpulses/s Command pulse: Sink	Differential pulse 4 Mpulses/s Command pulse: Sink/Source	MR-J4- _A_ Servo Amplifier Instruction Manual
9	The number of DIO points (excluding EM1)	DI: 5 points × 8 axes, DO: 2 points × 8 axes * When an extension I/O unit is used, DI: 32 points; DO: 8 points added	DI: 9 points, DO: 6 points	MR-J4- _A_ Servo Amplifier Instruction Manual
10	DIO interface	Input: Sink Output: Sink	Input: Sink/source Output: Sink/source	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 3.2
11	Analog input/output	(Input) Unprovided (Output) 10-bit or equivalent × 3 ch	(Input) 2 ch Torque: 10-bit; Speed: 14-bit or equivalent (Output) 10-bit or equivalent × 2 ch	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 3.5
12	Number of internal speed commands (General-purpose interface)	0 points	7 points	MR-J4- _A_ Servo Amplifier Instruction Manual
13	Parameter setting method	Setup software (SETUP161E)	MR Configurator2 Push-button (General-purpose interface)	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 6.1.2
14	Setup software communication	RS-232C	USB	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 11.7.3
15	Servo motor (Encoder resolution)	HC- _FS series (17-bit ABS)	HG series (22-bit ABS)	MR-J4- _A_ Servo Amplifier Instruction Manual
16	Motor maximum torque	HC-KFS 300% HC-MFS 300%	HG-KR 350% (models with a gear: 300%) HG-MR 300%	MR-J4- _A_ Servo Amplifier Instruction Manual
17	LED display	7-segment 5-digit	7-segment 5-digit	MR-J4- _A_ Servo Amplifier Instruction Manual
18	Advanced vibration suppression control II	Unprovided	Provided	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 7.1.4
19	Adaptive filter	Provided (I)	Provided (II with improved functions)	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 7.1.2
20	Notch filter	Provided (× 2)	Provided (× 5)	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 7.1.6
21	Tough drive	Unprovided	Provided	MR-J4- _A_ Servo Amplifier Instruction Manual, Section 7.3
22	Drive recorder	Unprovided	Provided	MR-J4- _A_ Servo Amplifier Instruction Manual
23	Forced stop	EM1 (DB stop)	EM1 (DB stop)/EM2 (deceleration stop) optional	MR-J4- _A_ Servo Amplifier Instruction Manual

# Part 6: Review on Replacement of MR-J2M with MR-J4

## 3.2 Comparison of Standard Connection Diagrams

# Part 6: Review on Replacement of MR-J2M with MR-J4

## 3.3 List of Corresponding Connectors and Terminal Blocks

### (1) Connector comparison table

An example of connections with the peripheral equipment is shown below. Refer to the respective Installation Guides and Instruction Manuals for details on signals.

Note 1. The power factor improving AC reactor can also be used. In this case, the power factor improving DC reactor cannot be used.

### (2) List of corresponding connectors

MR-J2M-A	
(1)	I/O signal connector [CN1A]
(2)	I/O signal connector [CN1B]
(3)	Encoder connector [CN2]
(4)	Communication connector [CN3]
	PC connection Analog monitor
(5)	Main circuit power connector [CNP3]
	Regenerative option connector [CNP1A]
(6)	Servo motor power connector [CNP2]
(7)	Control circuit power connector [CNP1B]
(8)	Battery connector [CON5]
(9)	Extended I/O unit connector [CN4A] [CN4B]

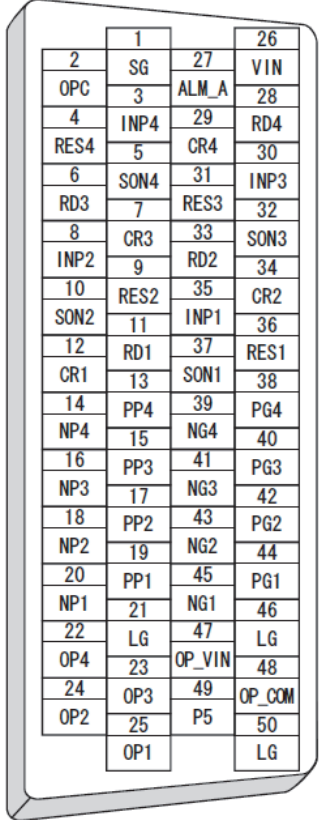

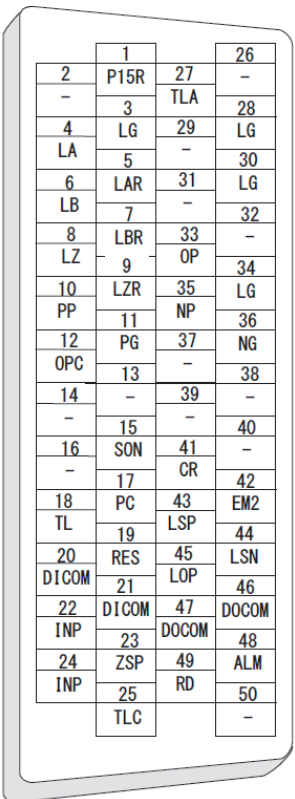

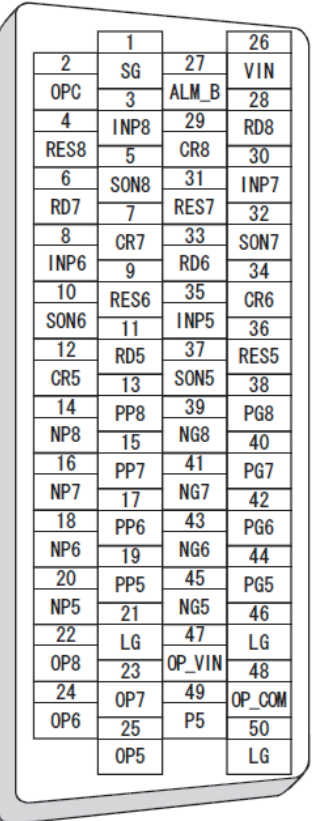

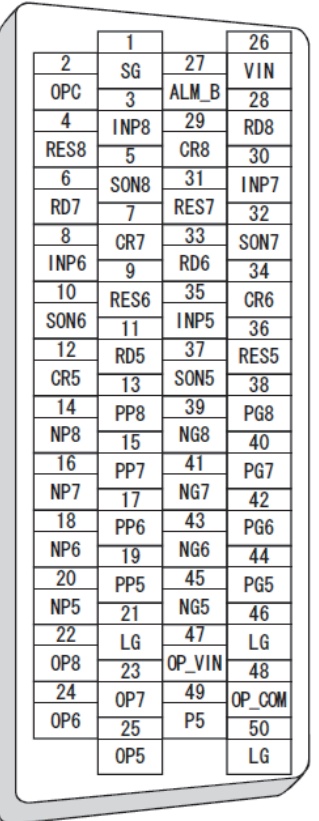

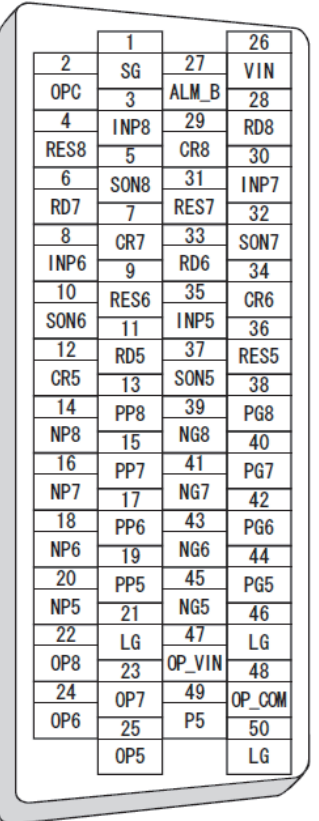

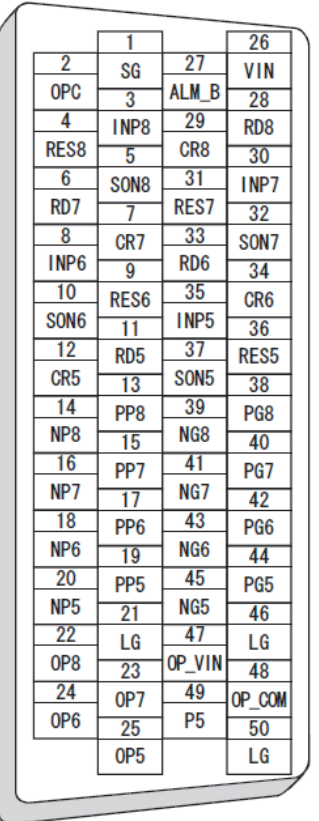

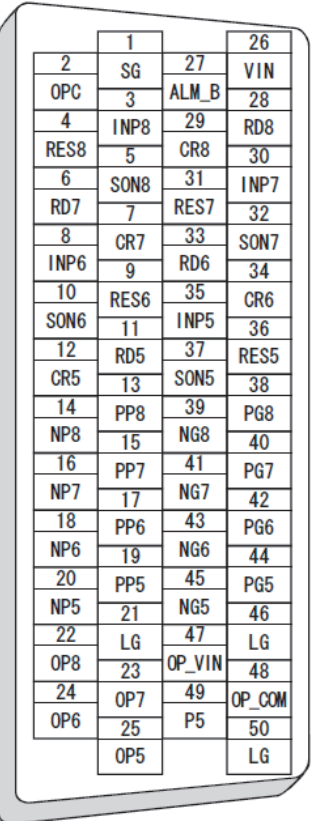

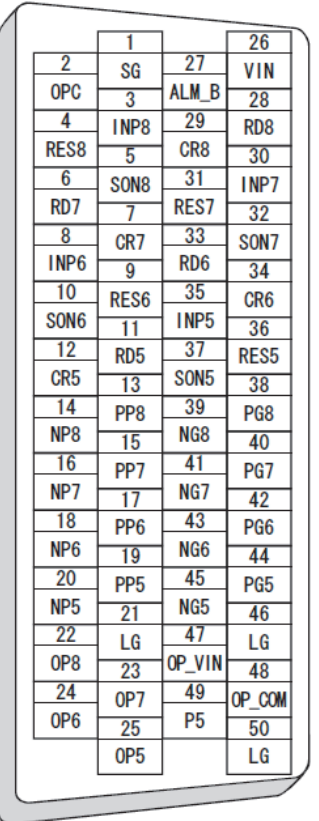

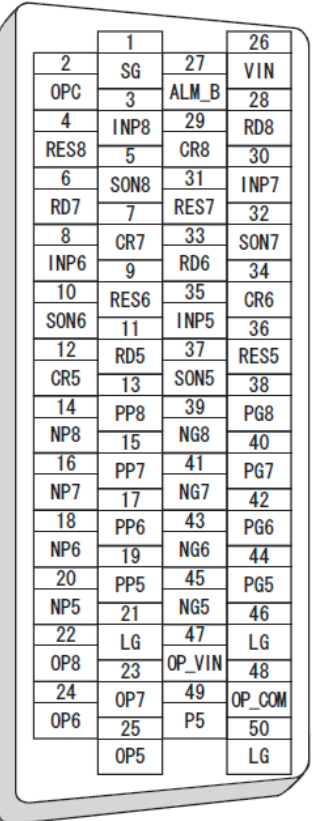

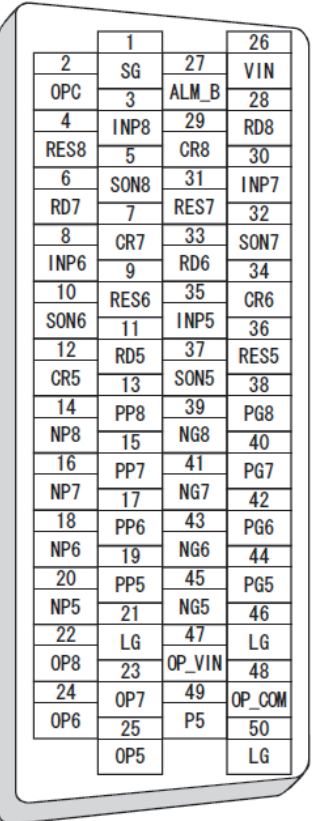

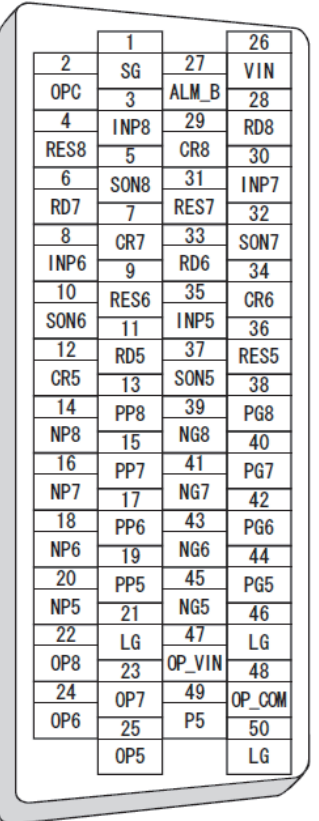

MR-J4- _A_		Note
I/O signal connector	[CN1]	Prepare a new cable.
Encoder connector	[CN2]	Must switch to encoder cable (option) or prepare a new cable.
USB communication connector	[CN5]	Switch to USB cable (option).
Analog monitor connector	[CN6]	Switch to monitor cable (option).
Main circuit power connector	[CNP1]	Switch to the power connector (enclosed with the amplifier).
Servo motor power connector	[CNP3]	
Control circuit power connector	[CNP2]	
Battery connector	[CN4]	Prepare a new battery.
I/O signal connector	[CN1]	Prepare a new cable.

Note. When not using the STO function, attach a short-circuit connector supplied with a servo amplifier onto CN8 (STO input signal connector).

# Part 6: Review on Replacement of MR-J2M with MR-J4

## Part 6: Review on Replacement of MR-J2M with MR-J4

### 3.4 Comparison of Peripheral Equipment

POINT
● Refer to "Part 9: Review on Replacement of Optional Peripheral Equipment".

### 3.5 Comparison of Parameters

The correspondence of the MR-J2M series and MR-J4 series parameter numbers is shown below. Refer to the respective Instruction Manuals for detailed specifications of each parameter.

#### 3.5.1 Parameter comparison list

POINT
<ul style="list-style-type: none"> <li>● Parameters for manufacturer setting are not described here.</li> <li>● With MR-J4-_A_, the deceleration to a stop function is enabled in the factory setting. To disable the deceleration to a stop function, set [Pr. PA04] to "0 _ _ _".</li> <li>● Refer to the respective Instruction Manuals for detailed specifications of each parameter.</li> </ul>

#### (1) Interface unit MR-J2M-P8A

MR-J2M-A (Interface unit MR-J2M-P8A)		MR-J4-_A_		Note
No.	Name	No.	Name	
0	Serial communication function selection	PC21	RS-422 communication function selection	MR-J4-A supports only RS-422. When the personal computer is RS-232C, use the RS-422/RS-232C conversion cable DSV-CABV (manufactured by Diatrend).
	Alarm history clear	PC18	Alarm history clear	
1	Regenerative option selection	PA02	Regenerative options	The setting must be changed according to option model.
2	Serial communication protocol checksum selection			The MR-J4-_A_ initial setting is "Provided". Separate consultation is required for other settings.
3	Analog monitor 1 output	PC14	Analog monitor 1 output	The setting value must be changed according to monitor output data.
4	Analog monitor 2 output	PC15	Analog monitor 2 output	
5	Analog monitor 3 output			
6	Analog monitor output 1 offset	PC39	Analog monitor 1 offset	Depends on the hardware. The setting values must be changed.
7	Analog monitor output 2 offset	PC40	Analog monitor 2 offset	
8	Analog monitor output 3 offset			
9	Input signal filter	PD29	Input filter setting	Some of the settings cannot be set.
10	Interface unit serial communication station number selection	PC20	Station number setting	
11	1st slot serial communication station number selection	PC20	Station number setting	
12	2nd slot serial communication station number selection	PC20	Station number setting	
13	3rd slot serial communication station number selection	PC20	Station number setting	
14	4th slot serial communication station number selection	PC20	Station number setting	
15	5th slot serial communication station number selection	PC20	Station number setting	
16	6th slot serial communication station number selection	PC20	Station number setting	
17	7th slot serial communication station number selection	PC20	Station number setting	
18	8th slot serial communication station number selection	PC20	Station number setting	
19	IFU parameter writing inhibit	PA19	Parameter writing inhibit	Change the setting value as necessary.
20	Serial communication time-out selection			The initial setting for MR-J4-_A_ is "No time-out check". Separate consultation is required for other settings.

## Part 6: Review on Replacement of MR-J2M with MR-J4

### (2) Drive unit MR-J2M-\_DU

MR-J2M-A (Drive unit MR-J2M-_DU)		MR-J4-_A_		Note										
No.	Name	No.	Name											
1	Absolute position detection system	PA03	Absolute position detection system											
2	Auto Tuning	PA09	Auto tuning response	The setting value must be changed based on machine resonance frequency.										
		PA08	Auto tuning mode	The setting value needs to be changed according to the auto tuning mode. Some of the settings cannot be set. <Gain adjustment mode correspondence table> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>MR-J2M-A</th> <th>MR-J4-_A_</th> </tr> </thead> <tbody> <tr> <td>Interpolation mode</td> <td>2 gain adjustment mode 1</td> </tr> <tr> <td>Auto tuning mode 1</td> <td>Auto tuning mode 1</td> </tr> <tr> <td>Auto tuning mode 2</td> <td>Auto tuning mode 2</td> </tr> <tr> <td>Manual mode 1</td> <td rowspan="2" style="text-align: center;">/</td> </tr> <tr> <td>Manual mode 2</td> <td>Manual mode</td> </tr> </tbody> </table>	MR-J2M-A	MR-J4-_A_	Interpolation mode	2 gain adjustment mode 1	Auto tuning mode 1	Auto tuning mode 1	Auto tuning mode 2	Auto tuning mode 2	Manual mode 1	/
MR-J2M-A	MR-J4-_A_													
Interpolation mode	2 gain adjustment mode 1													
Auto tuning mode 1	Auto tuning mode 1													
Auto tuning mode 2	Auto tuning mode 2													
Manual mode 1	/													
Manual mode 2		Manual mode												
3	Electronic gear numerator	PA06	Electronic gear numerator	The setting value must be changed according to resolution and detection capability.										
4	Electronic gear denominator	PA07	Electronic gear denominator											
5	In-position range	PA10	In-position range	Set it per command input pulse before electronic gear conversion for both MR-J2M-A and MR-J4-_A_.										
6	Position loop gain 1.	PB07	Model loop gain	The unit system is different. (rad/s→0.1 rad/s)										
7	Position command acceleration/deceleration time constant	PB03	Position command acceleration/deceleration time constant											
16	Alarm history clear	PC18	Alarm history clear											
19	DRU parameter writing inhibit	PA19	Parameter writing inhibit	Change the setting value as necessary.										
20	Slight vibration suppression control	PB24	Slight vibration suppression control											
	Encoder cable communication method selection	PC22	Encoder cable communication method selection											
21	Function selection 3 (command pulse selection)	PA13	Command pulse input form											
22	Stop method selection when LSP/LSN is valid	PD30	Stop method selection when LSP/LSN is valid											
23	Feed forward gain	PB04	Feed forward gain											
24	Zero speed	PC17	Zero speed											
27	Encoder output pulses	PA15	Encoder output pulse	Max. output frequency is different.										
28	Internal torque limit 1	PA11	Forward rotation torque limit											
		PA12	Reverse rotation torque limit											
33	Electromagnetic brake sequence output	PC16	Electromagnetic brake sequence output											
34	Load to motor inertia ratio	PB06	Load to motor inertia ratio	The unit system is different. (0.1-fold→0.01-fold) Pay attention to the setting value.										
35	Position loop gain 2.	PB08	Position loop gain											
36	Speed loop gain 1.			No corresponding parameter (Setting not required)										
37	Speed loop gain 2.	PB09	Speed loop gain											
38	Speed integral compensation.	PB10	Speed integral compensation	The unit system is different. (ms → 0.1 ms)										
39	Speed differential compensation	PB11	Speed differential compensation											
42	Input signal selection 1	PD32	Clear (CR) selection											
51	Operating method selection for RES (Reset) shorting	PD30	Base circuit status selection for RES on											

## Part 6: Review on Replacement of MR-J2M with MR-J4

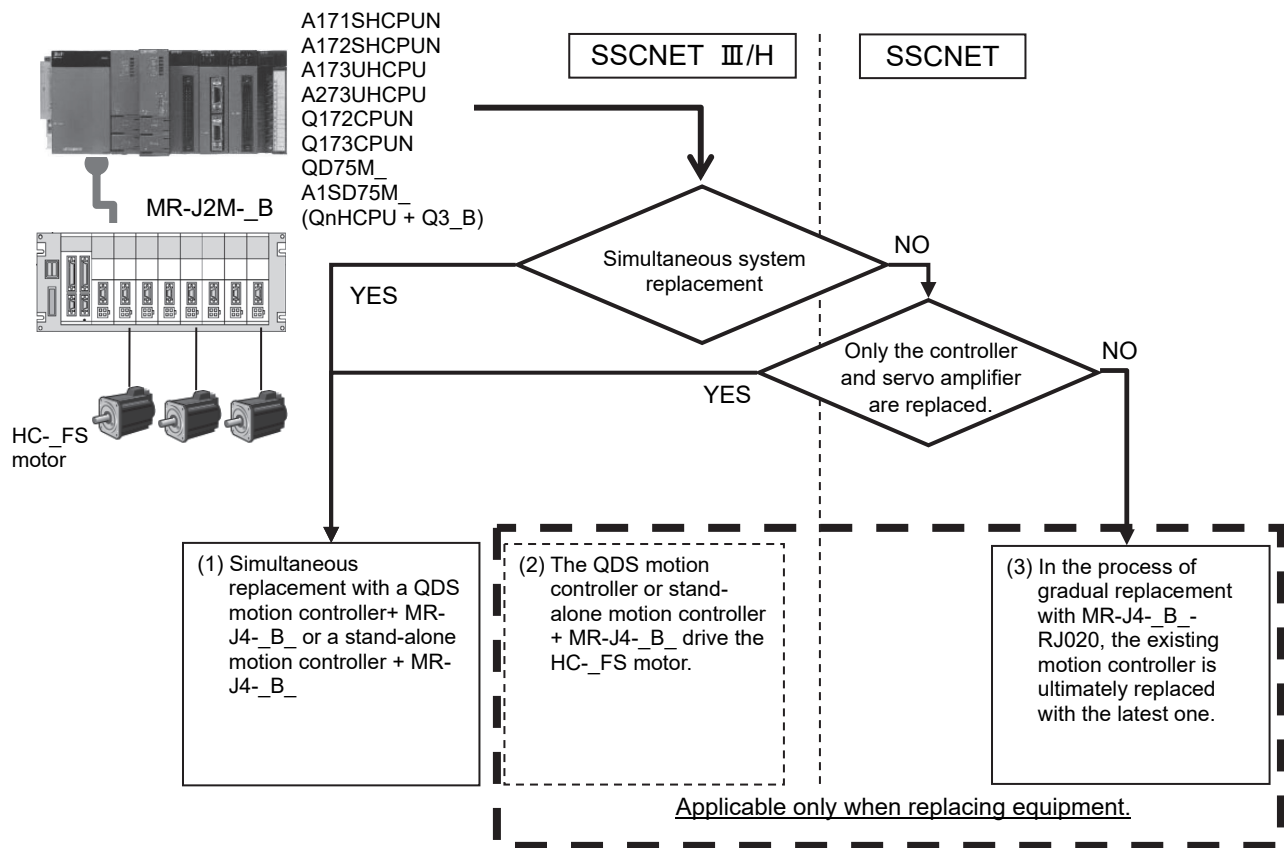

MR-J2M-A (Drive unit MR-J2M-_DU)		MR-J4-_A_		Note
No.	Name	No.	Name	
54	Rotation direction selection	PA14	Rotation direction selection	
	Encoder output pulse phase selection Encoder output pulse setting selection	PC19	Encoder output pulse phase selection Encoder output pulse setting selection	
55	Position command acceleration/deceleration time constant control	PB25	Position acceleration/deceleration filter type selection	
58	Machine resonance suppression filter 1	PB13 PB14	Machine resonance suppression filter 1 Notch shape selection 1	Change the setting value according to the frequency and depth.
59	Machine resonance suppression filter 2	PB15 PB16	Machine resonance suppression filter 2 Notch shape selection 2	Change the setting value according to the frequency and depth.
60	Low-pass filter/adaptive vibration suppression control			No corresponding parameter (Machine resonance filters can be automatically adjusted with PB01.)
61	Load to motor inertia ratio 2	PB29	Load to motor inertia ratio after gain switching	The unit system is different. (0.1-fold → 0.01-fold) Pay attention to the setting value.
62	Position loop gain 2 changing ratio	PB30	Position loop gain after gain switching	It is necessary to convert the ratio to a value to change the setting value.
63	Speed loop gain 2 changing ratio	PB31	Speed loop gain after gain switching	
64	Speed integral compensation changing ratio	PB32	Speed integral compensation after gain switching	
65	Gain switching selection	PB26	Gain switching selection	
66	Gain switching condition	PB27	Gain switching condition	
67	Gain switching time constant	PB28	Gain switching time constant	
69	Command pulse multiplication numerator 2	PC32	Command input pulse multiplication numerator 2	
70	Command pulse multiplication numerator 3	PC33	Command input pulse multiplication numerator 3	
71	Command pulse multiplication numerator 4	PC34	Command input pulse multiplication numerator 4	
76	Internal torque limit 2	PC35	Internal torque limit 2	The unit system is different. (% → 0.1%)

# Part 6: Review on Replacement of MR-J2M with MR-J4

## 4. DIFFERENCES BETWEEN MR-J2M-B AND MR-J4-\_B\_

POINT
● Before replacement, note that the dimensions, peripheral circuits, and optional peripheral devices for the MR-J2M servo amplifier are different from those for the MR-J4 servo amplifier.
● "QDS motion controller" refers to the following model. Q172DSCPU/Q173DSCPU
● "Stand-alone motion controller" refers to the following model. Q170MSCPU(-S1)

### 4.1 Review on Replacement Method

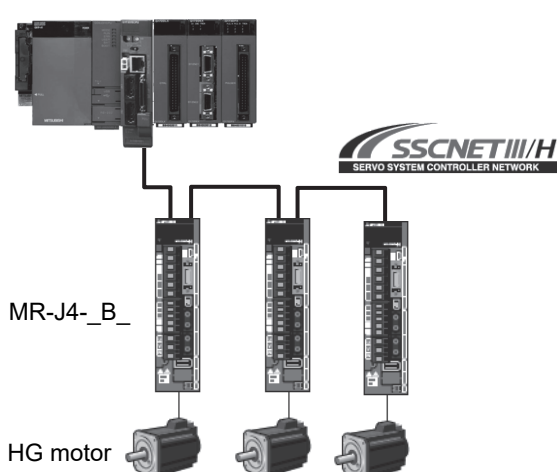

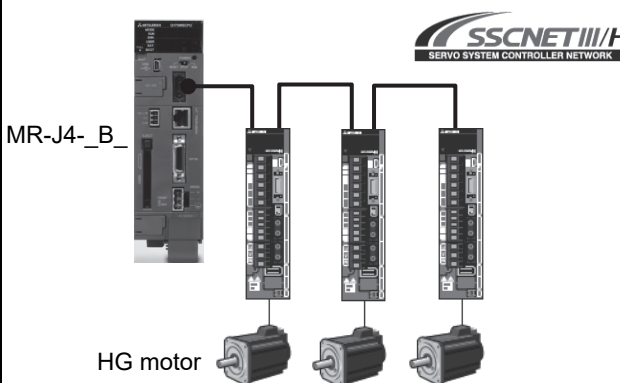

For details about (3), refer to "[Appendix 1] Summary of MR-J4-\_B\_-RJ020 + MR-J4-T20".

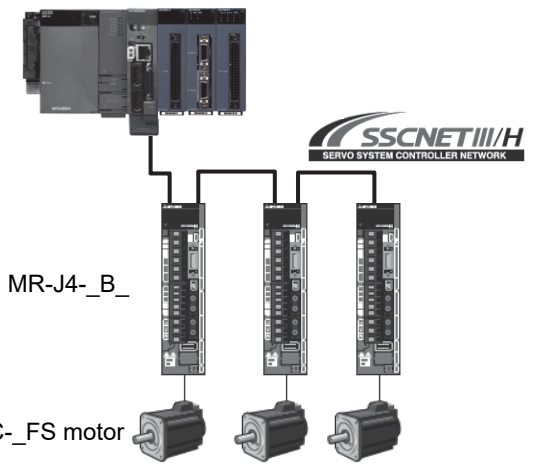

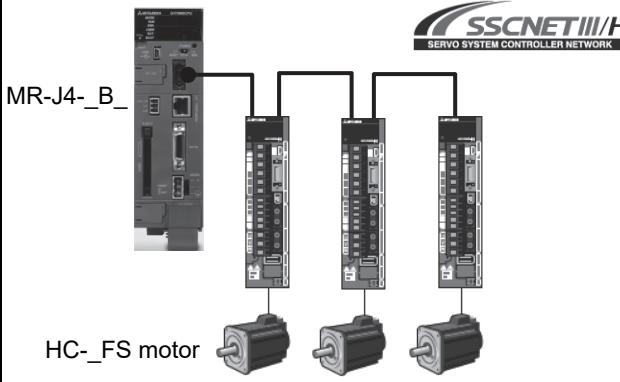

# Part 6: Review on Replacement of MR-J2M with MR-J4

## 4.2 Replacement Method

### (1) For simultaneous replacement

QDS motion controller + MR-J4-_B_ + HG motor	Stand-alone motion controller + MR-J4-_B_ + HG motor
<p>QnUD(E)(H)CPU + QDS motion controller + Q3_DB</p>  <p>MR-J4-_B_</p> <p>HG motor</p> <p>Advantage: Higher-speed motion control and excellent expandability achieve a shorter cycle time.</p>	<p>SSCNET III/H-compatible stand-alone motion controller: Q170MSCPU(-S1)</p>  <p>MR-J4-_B_</p> <p>HG motor</p> <p>Advantage: High performance equivalent to that of a QDS motion controller can be achieved at a lower cost.</p>

### (2) For replacement of only a controller and a servo amplifier

QDS motion controller + MR-J4-_B_ + HC-_FS_ motor	Stand-alone motion controller + MR-J4-_B_ + HC-_FS_ motor
<p>QnUD(E)(H)CPU + QDS motion controller + Q3_DB</p>  <p>MR-J4-_B_</p> <p>HC-_FS_ motor</p> <p>Advantage: Higher-speed motion control and excellent expandability achieve a shorter cycle time without any changes made to the HC-_FS_ motor.</p>	<p>SSCNET III/H-compatible stand-alone motion controller: Q170MSCPU(-S1)</p>  <p>MR-J4-_B_</p> <p>HC-_FS_ motor</p> <p>Advantage: High performance equivalent to that of a QDS motion controller can be achieved at a lower cost without any changes made to the HC-_FS_ motor.</p>

## Part 6: Review on Replacement of MR-J2M with MR-J4

- (3) Gradual replacement of MR-J2M-B with MR-J4-B  
 Refer to "[Appendix 1] Summary of MR-J4-B-RJ020 + MR-J4-T20".

### 4.3 Function Comparison Table

- (1) General  
 Same as 3.1.1
- (2) Comparison of networks  
 <Comparison of servo system network specifications>

Item	MR-J2M series	
	SSCNET	
Communication media	Metal cable	
Communication speed	5.6Mbps	
Transmission distance	Overall length: 30 m	

→

MR-J4 series (Note)	
SSCNET III	SSCNET III/H
Optical fiber cable	
50Mbps	150Mbps
[Standard cord inside cabinet/standard cable outside cabinet] Maximum distance between stations: 20 m Maximum overall distance: 320 m (20 m x 16 axes)	
[Long distance cable] Maximum distance between stations: 50 m Maximum overall distance: 800 m (50 m x 16 axes)	[Long distance cable] Maximum distance between stations: 100 m Maximum overall distance: 1600 m (100 m x 16 axes)

Note. If the first controller communication is connected using SSCNET III/H in the factory setting, the operation mode will be fixed to "J4 mode". If the communication is connected using SSCNET III, the mode will be fixed to "J3 compatibility mode". To return to the factory setting or to select an arbitrary mode, change the setting with the application "MR-J4(W)-B Change mode" or "MR Mode Change".

The application "MR-J4(W)-B Change mode" or "MR Mode Change" are available with MR Configurator2 Version 1.12N and later. When a version older than 1.12N is used, download an update version from the MITSUBISHI ELECTRIC FA Global Website.

# Part 6: Review on Replacement of MR-J2M with MR-J4

## 4.4 Comparison of Standard Connection Diagrams

# Part 6: Review on Replacement of MR-J2M with MR-J4

## 4.5 List of Corresponding Connectors and Terminal Blocks

### (1) Connector comparison table

An example of connections with the peripheral equipment is shown below. Refer to the respective Installation Guides and Instruction Manuals for details on signals.

### (2) List of corresponding connectors

MR-J2M-B	
(1)	Bus cable connector [CN1A]
(2)	Bus cable-connecting connector [CN1B]
(3)	Encoder connector [CN2]
(4)	Communication connector [CN3]
	PC connection Analog monitor
(5)	Main circuit power connector [CNP3] Regenerative option connector [CNP1A]
(6)	Servo motor power connector [CNP2]
(7)	Control circuit power connector [CNP1B]
(8)	Battery connector [CON5]
(9)	Extension I/O unit connectors [CN4A] [CN4B]

MR-J4- B_	Note
SSCNET III cable connector [CN1A]	Switch to SSCNET III cable (option).
SSCNET III cable connector [CN1B]	Switch to SSCNET III cable (option).
Encoder connector [CN2]	Must switch to encoder cable (option) or prepare a new cable.
USB communication connector [CN5]	Switch to USB cable (option).
I/O signal connector [CN3]	Prepare a new cable.
Main circuit power connector [CNP1]	Switch to the power connector (enclosed with the amplifier).
Servo motor power connector [CNP3]	
Control circuit power connector [CNP2]	
Battery connector [CN4]	Prepare a new battery.
I/O signal connector [CN3]	Prepare a new cable.

Note. When not using the STO function, attach a short-circuit connector supplied with a servo amplifier onto CN8 (STO input signal connector).

# Part 6: Review on Replacement of MR-J2M with MR-J4

## (3) Comparison of signals

MR-J2M-B		Signal symbol	MR-J4- _B_	
Connector pin assignment	Connector pin No.		Connector Pin number	Connector pin assignment
	CN3-20	EM1 (EM2)	CN3-20	
	CN3-13	MBR	CN3-13*	
	CN3-4	MO1	CN3-4	
	CN3-14	MO2	CN3-14	
	CN3-7	MO3	-	
	CN3-8	VIN (DICOM)	CN3-5 CN3-10	
	CN3-3	SG (DOCOM)	CN3-3	
	CN3-1 CN3-11	LG	CN3-1 CN3-11	
	Plate	SD	Plate	

\* The following table shows the output device pins and parameters for assigning R-J4- \_B\_ devices.

Connector pin No.	Parameter	Initial assignment device	I/O division
CN3-13	[Pr. PD07]	MBR	DO-1
CN3-15	[Pr. PD09]	ALM	
CN3-9	[Pr. PD08]	INP	

## 4.6 Comparison of Peripheral Equipment

POINT
● Refer to "Part 9: Review on Replacement of Optional Peripheral Equipment".

## Part 6: Review on Replacement of MR-J2M with MR-J4

### 4.7 Comparison of Parameters

The correspondence of the MR-J2M series and MR-J4 series parameter numbers is shown below. Refer to the respective Instruction Manuals for detailed specifications of each parameter.

#### 4.7.1 Parameter comparison list

POINT
<ul style="list-style-type: none"> <li>● Parameters for manufacturer setting are not described here.</li> <li>● With MR-J4- _B_, the deceleration to a stop function is enabled in the factory setting. To disable the deceleration to a stop function, set [Pr. PA04] to "0 _ _ _".</li> <li>● For details, refer to "Part 3: Review on Replacement of MR-J2S- _B_ with MR-J4- _B_".</li> </ul>

#### (1) Interface unit MR-J2M-P8A

MR-J2M-B (Interface unit MR-J2M-P8B)		MR-J4- _B_		Note
No.	Name	No.	Name	
0	Serial communication function selection			No serial communication function.
	Alarm history clear	PC21	Alarm history clear	
1	Serial communication time-out selection			No serial communication function.
2	Serial communication protocol checksum selection			No serial communication function.
3	Analog monitor 1 output	PC09	Analog monitor 1 output	The setting value must be changed according to monitor output data.
4	Analog monitor 2 output	PC10	Analog monitor 2 output	
5	Analog monitor 3 output			
6	Analog monitor output 1 offset	PC11	Analog monitor 1 offset	Depends on hardware.
7	Analog monitor output 2 offset	PC12	Analog monitor 2 offset	Change the setting value.
8	Analog monitor output 3 offset			
9	SSCNET type selection (SSCNET communication cycle)			MR-J4- _B_ is compatible with SSCNET III/H only. The communication cycle depends on the specifications of the controller and the number of connected axes.
10	Electromagnetic brake interlock (MBR) axis No. selection			Assigned to CN3.13
	Test operation selection			The test operation can be set with the control axis setting switch (SW2).
11	1st slot serial communication station number selection			The axis No. can be set with the selection rotary switch (SW1).
12	2nd slot serial communication station number selection			
13	3rd slot serial communication station number selection			
14	4th slot serial communication station number selection			
15	5th slot serial communication station number selection			
16	6th slot serial communication station number selection			
17	7th slot serial communication station number selection			
18	8th slot serial communication station number selection			
19	IFU parameter writing inhibit	PA19	Parameter writing inhibit	Change the setting value as necessary.

## Part 6: Review on Replacement of MR-J2M with MR-J4

### (2) Drive unit MR-J2M-\_DU

MR-J2M-B (Drive unit MR-J2M-_DU)		MR-J4-_B_		Note												
No.	Name	No.	Name													
1	Absolute position detection selection	PA03	Absolute position detection system selection													
2	Regenerative resistor	PA02	Regenerative option selection	The setting must be changed according to option model.												
3 to 5	Automatically set from the servo system controller			No corresponding parameter (Setting not required)												
6	Feedback pulse number			No corresponding parameter												
7	Rotation direction selection	PA14	Rotation direction selection													
8	Auto Tuning	PA08	Auto tuning mode	<p>The setting value needs to be changed according to the auto tuning mode. Some of the settings cannot be set. Gain adjustment mode correspondence table</p> <table border="1"> <thead> <tr> <th>MR-J2M-B</th> <th>MR-J4- B</th> </tr> </thead> <tbody> <tr> <td>Interpolation mode</td> <td>2 gain adjustment mode 1</td> </tr> <tr> <td>Auto tuning mode 1</td> <td>Auto tuning mode 1</td> </tr> <tr> <td>Auto tuning mode 2</td> <td>Auto tuning mode 2</td> </tr> <tr> <td>Manual mode 1</td> <td></td> </tr> <tr> <td>Manual mode 2</td> <td>Manual mode</td> </tr> </tbody> </table>	MR-J2M-B	MR-J4- B	Interpolation mode	2 gain adjustment mode 1	Auto tuning mode 1	Auto tuning mode 1	Auto tuning mode 2	Auto tuning mode 2	Manual mode 1		Manual mode 2	Manual mode
MR-J2M-B	MR-J4- B															
Interpolation mode	2 gain adjustment mode 1															
Auto tuning mode 1	Auto tuning mode 1															
Auto tuning mode 2	Auto tuning mode 2															
Manual mode 1																
Manual mode 2	Manual mode															
9	Servo response	PA09	Auto tuning response	The setting value must be changed based on machine resonance frequency.												
10	Forward rotation torque limit			No corresponding parameter												
11	Reverse rotation torque limit															
12	Ratio of load inertia to servo motor inertia (load inertia ratio)	PB06	Load to motor inertia ratio	The unit system is different. (0.1-fold→0.01-fold) Pay attention to setting value.												
13	Position loop gain 1.	PB07	Model loop gain	The unit system is different. (rad/s→0.1 rad/s)												
14	Speed loop gain 1.			No corresponding parameter (Setting not required)												
15	Position loop gain 2.	PB08	Position loop gain	The unit system is different. (rad/s→0.1 rad/s)												
16	Speed loop gain 2.	PB09	Speed loop gain													
17	Speed integral compensation.	PB10	Speed integral compensation	The unit system is different. (ms→0.1 ms)												
18	Machine resonance suppression filter 1	PB13 PB14	Machine resonance suppression filter 1 Notch shape selection 1	Change the setting value according to the frequency and depth.												
19	Feed forward gain	PB04	Feed forward gain													
20	In-position range	PA10	In-position range	Pay attention to the unit system. MR-J2M-B: Set by the feedback pulse unit. MR-J4- B : Set per command pulse.												
21	Electromagnetic brake sequence output	PC02	Electromagnetic brake sequence output													
22	For manufacturer setting															
23	Encoder cable selection	PC04	Encoder communication method selection													
	Servo forced stop	PA04	Servo forced stop selection													
24	Motor-less operation selection	PC05	Motor-less operation selection													
	Slight vibration suppression control selection	PB24	Slight vibration suppression control													
25	Low-pass filter selection	PB23	Low-pass filter selection													
	Adaptive vibration suppression control selection			No corresponding parameter (Machine resonance filters can be automatically adjusted with PB01.)												
	Adaptive vibration suppression control level selection															
30	Zero speed	PC07	Zero speed													
31	Error excessive alarm level	PC01	Error excessive alarm level	J2MB: 0.025 rev. unit J4B: 1/0.1/0.01/0.001 rev. unit selectable												
		PC06	Error excessive alarm level unit selection													
32	PI-PID switching control selection	PB24	PI-PID switching control selection	Switching with PI-PID switching position droop is not possible.												
33	Encoder output pulse setting selection	PA15	Encoder output pulse	Max. output frequency is different.												

## Part 6: Review on Replacement of MR-J2M with MR-J4

MR-J2M-B (Drive unit MR-J2M-_DU)		MR-J4-_B_		Note
No.	Name	No.	Name	
34	PI-PID switching position droop			No corresponding parameter
36	Speed differential compensation	PB11	Speed differential compensation	
38	Encoder output pulses	PA15	Encoder output pulse	Max. output frequency is different.
40	DRU parameter writing inhibit	PA19	Parameter writing inhibit	Change the setting value as necessary.

16	Setup software communication function	RS-232C	<b>USB</b>

## Part 7: Common Reference Material

Item		MR-J2S- _A_ /MR-J2S- _B_	MR-J4- _A_ /MR-J4- _B_
17	Servo motor (Encoder resolution)	HC- _FS series (17-bit ABS) HA- _FS series (17-bit ABS)	HG series ( <b>22-bit</b> ABS)
18	Motor maximum torque	HC-KFS 300%	HG-KR <b>350%</b> (with a gear reducer: 300%)
		HC-MFS 300%	HG-MR 300%
		HC-SFS 300%	HG-SR 300%
		HA-LFS 250%,300%	HG-JR <b>300%</b>
		HC-RFS 250%	HG-RR 250%
	HC-UFS 300%	HG-UR 300%	
19	Button (General-purpose interface)	4 buttons	4 buttons
20	LED display	General-purpose interface: 7-segment 5-digit SSCNET interface: 7-segment 2-digit	General-purpose interface: 7-segment 5-digit SSCNET interface: 7-segment <b>3-digit</b>
21	Advanced vibration suppression control II	Unprovided	<b>Provided</b>
22	Adaptive filter	Provided (Adaptive vibration suppression control)	Provided <b>(Adaptive filter II with improved functions)</b>
23	Notch filter	Provided (2 pcs.)	Provided ( <b>5 pcs.</b> )
24	Tough drive	Unprovided	<b>Provided</b>
25	Drive recorder	Unprovided	<b>Provided</b>
26	Forced stop	EM1 (DB stop)	<b>EM1 (DB stop)/EM2 (deceleration stop) optional</b>
Note		Functions with difference are <b>shown with shading</b> .	

## Part 7: Common Reference Material

### (2) Comparison of MR-J2S series and MR-J4 series (Built-in positioning function/program supported)

Item		MR-J2S- CP_ / MR-J2S- CL_ (7 kW or less, 100 V/200 V class)	MR-J4- A_-RJ (7 kW or less, 100 V/200 V class)
1	Capacity range	(100 V class) 0.1 kW to 0.4 kW (200 V class) 0.1 kW to 7 kW	(100 V class) 0.1 kW to 0.4 kW (200 V class) 0.1 kW to 7 kW
2	Internal regenerative resistor	Built-in (0.2 kW to 7 kW)	Built-in (0.2 kW to 7 kW)
3	Dynamic brake	Built-in (0.1 kW to 7 kW)	Built-in (0.1 kW to 7 kW) <b>Coasting distance may be different. (Note)</b>
4	Control circuit power	(100 V Class) 1-phase 100 V AC to 120 V AC (200 V Class) 1-phase 200 V AC to 230 V AC	(100 V Class) 1-phase 100 V AC to 120 V AC (200 V Class) 1-phase 200 V AC to <b>240 V AC</b>
5	Main circuit power	(100 V Class) 1-phase 100 V AC to 120 V AC (200 V Class) 1-phase 230 V AC/3-phase 200 V AC to 230 V AC (to 750 W) 3-phase 200 V AC to 230 V AC (1 kW to 7 kW)	(100 V Class) 1-phase 100 V AC to 120 V AC (200 V Class) 1-phase /3-phase 200 V AC to <b>240 V AC</b> (to 750 W) 3-phase 200 V AC to <b>240 V AC</b> (1 W to 7 kW)
6	24 V DC power	Built-in	<b>External supply required</b>
7	Auto tuning	Real-time auto tuning: 15 steps	Real-time auto tuning: <b>40 steps</b> <b>One-touch tuning</b>
8	Control mode	(MR-J2S- CP_) Built-in positioning function (MR-J2S- CL_) Built-in program operation function	Built-in positioning function Built-in program operation function <b>Position control mode (pulse command)</b> <b>Speed control mode (analog command)</b> <b>Torque control mode (analog command)</b>
9	Manual pulse generator maximum input pulse	Open collector 200 kpulses/s	Open collector 200 kpulses/s
10	The number of DIO points (excluding EM1)	DI: 8 points, DO: 5 points, DI/DO combination: 1 point	<b>DI: 11 points, DO: 8 points</b>
11	Encoder pulse output	ABZ-phase (differential line driver), Z-phase (open-collector)	ABZ-phase (differential line driver), Z-phase (open-collector)
12	DIO interface	Input: Sink/source Output: Sink	Input: Sink/source Output: Sink/source
13	Analog input/output	(Input) 2 ch 10-bit torque limit, 10-bit override (Output) 10-bit or equivalent x 2 ch	(Input) 2 ch 10-bit torque limit, 10-bit override or equivalent (Output) 10-bit or equivalent x 2 ch
14	The number of internal speed commands	7 points	7 points
15	Parameter setting method	Setup software (SETUP161E) Push-button	<b>MR Configurator2</b> Push-button <b>parameter unit</b>
16	Setup software communication	RS-232C	USB
17	Servo motor (Encoder resolution)	HC_FS series (17-bit ABS) HA_FS series (17-bit ABS)	<b>HG series (22-bit ABS)</b>
18	Motor maximum torque	HC-KFS 300%	HG-KR <b>350%</b> (with a gear reducer: 300%)
		HC-MFS 300%	HG-MR 300%
		HC-SFS 300%	HG-SR 300%
		HA-LFS 250%, 300%	HG-JR <b>300%</b>
		HC-RFS 250%	HG-RR 250%
		HC-UFS 300%	HG-UR 300%
19	Button	4 buttons	4 buttons
20	LED display	7-segment 5-digit	7-segment 5-digit
21	Advanced vibration suppression control	Unprovided	<b>Provided</b>
22	Adaptive filter	Provided (Adaptive vibration suppression control)	Provided <b>(Adaptive filter II with improved functions)</b>
23	Notch filter	Provided (2 pcs.)	Provided ( <b>5 pcs.</b> )
24	Tough drive	Unprovided	<b>Provided</b>
25	Drive recorder	Unprovided	Provided
26	Forced stop	EM1 (DB stop)	EM1 (DB stop)/ <b>EM2 (deceleration stop) optional</b>
27	Point table No.	(MR-J2S- CP_) up to 31	<b>up to 255</b>
28	Program No.	(MR-J2S- CL_) up to 16 programs (120 steps)	<b>up to 256 programs (640 steps)</b>
29	Position data unit	mm	mm/degree/inch/pulse
Note		Functions with difference are <b>shown with shading</b> .	

Note. For the coasting distance, refer to "1.2.3 Dynamic brake: coasting distance".

## Part 7: Common Reference Material

### (3) Comparison of MR-J2M series and MR-J4 series (General-purpose interface / SSCNET interface)

Item		MR-J2M-A/ MR-J2M-B	MR-J4- _A_ / MR-J4- _B_
1	Capacity range (to 0.75 kW / 200 V)	0.1 to 0.75 kW / 200 V	0.1 to 0.75 kW / 200 V
2	Regenerative resistor	External option	Built-in (200 W or more)
3	Dynamic brake	Built-in	Built-in ( <b>Coasting distance is different.</b> )
4	Control circuit power	1-phase 200 V AC to 230 V AC	1-phase 200 V AC to <b>240 V AC</b>
5	Main circuit power	1-phase/3-phase 200 V AC to 230 V AC 3-phase 200 V AC to 230 V AC	1-phase/3-phase 200 V AC to <b>240 V AC</b> 3-phase 200 V AC to <b>240 V AC</b>
6	24 V DC power	External supply required	External supply required
7	Auto tuning	Real-time auto tuning:15 steps	Real-time auto tuning: <b>40 steps</b> <b>One-touch tuning</b>
8	Control mode	General-purpose interface • Position control mode (pulse command) SSCNET interface • Position control mode	General-purpose interface • Position control mode (pulse command) • Speed control mode (analog command) • Torque control mode (analog command) <b>SSCNET III/H-interface</b> • Position control mode • Speed control mode • <b>Torque control mode</b>
9	Maximum input pulses	Differential pulse 500 kpulses/s Open-collector 200 kpulses/s Command pulse: Sink	Differential pulse <b>4 Mpulses/s</b> Open-collector 200 kpulses/s Command pulse: Sink
10	The number of DIO points (excluding EM1)	General-purpose interface DI: 5 points × 8 axes; DO: 2 points × 8 axes SSCNET interface DI: 0 points; DO:0 points * When an extension I/O unit is used, DI: 32 points; DO: 8 points are added.	General-purpose interface <b>DI: 9 points, DO: 6 points</b> SSCNET III / H interface <b>DI: 3 points; DO: 3 points</b>
11	Encoder pulse output	ABZ-phase (differential line driver) General-purpose interface Z-phase (open collector)	ABZ-phase (differential line driver) General-purpose interface Z-phase (open collector)
12	DIO interface	Input: Sink Output: Sink	Input: Sink/ <b>source</b> Output: Sink/ <b>source</b>
13	Analog input/output	General-purpose interface (Input) Unprovided (Output) 10-bit or equivalent × 3 ch SSCNET interface (Output) 10-bit or equivalent × 3 ch	General-purpose interface (Input) 2 ch Torque: 10-bit; Speed: 14-bit or equivalent (Output) 10-bit or equivalent × 2 ch SSCNET III / H interface (Output) 10-bit or equivalent × 2 ch
14	The number of internal speed commands	(MR-J2M-A ) 0 points	(MR-J4- _A_ ) 7 points
15	Parameter setting method	MR Configurator (SETUP161E) Push-button	<b>MR Configurator2</b> Push-button (MR-J4- _A_ )
16	Setup software communication function	RS-232C	<b>USB</b>
17	Servo motor (Encoder resolution)	HC_FS series (17-bit ABS)	HG series ( <b>22-bit</b> ABS)
18	Motor maximum torque	HC-KFS 300% HC-MFS 300% HC-UFS 300%	HG-KR <b>350%</b> (with a gear reducer: 300%) HG-MR 300% HG-UR 300%
19	Button	(MR-J2M-A ) 4 buttons	(MR-J4- _A_ ) 4 buttons
20	LED display	(MR-J2M-A) 7-segment 5-digit (MR-J2M-B) 7-segment 5-digit	(MR-J4- _A_ ) 7-segment 5-digit (MR-J4- _B_ ) 7-segment <b>3-digit</b>
21	Advanced vibration suppression control II	Unprovided	<b>Provided</b>
22	Adaptive filter	Provided (I)	Provided ( <b>II function upgrading</b> )
23	Notch filter	Provided (2 pcs.)	Provided ( <b>5 pcs.</b> )
24	Tough drive	Unprovided	<b>Provided</b>
25	Drive recorder	Unprovided	<b>Provided</b>
26	Forced stop	EM1 (DB stop)	Select EM1 (DB stop) or <b>EM2 (deceleration to a stop)</b>
Note		Functions with difference are <b>shown with shading.</b>	

# Part 7: Common Reference Material

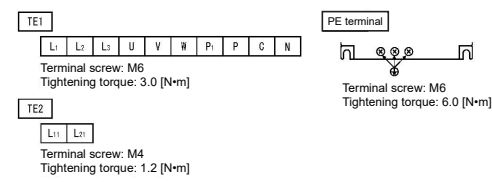

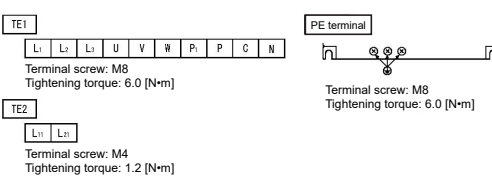

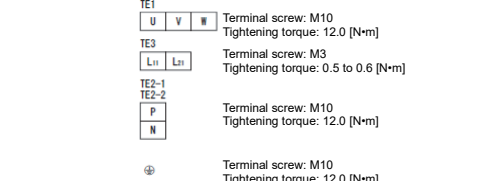

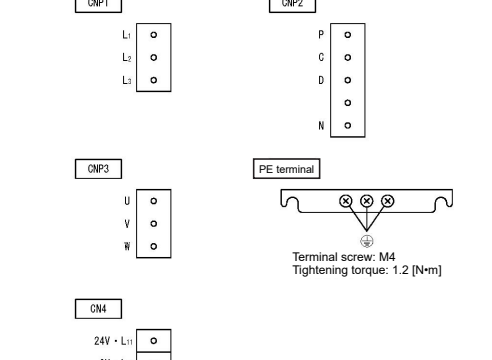

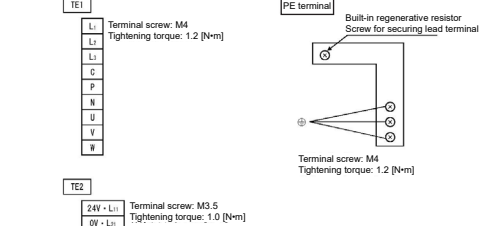

## 1.2 Servo amplifier

If using the existing cables and servo motor, refer to "[Appendix 2] Introduction to Renewal Tool".

## Part 7: Common Reference Material

### (2) Calculation of coasting distance

The figure shows the pattern in which the servo motor comes to a stop when the dynamic brake is operated. Use equation 7.1 to calculate an approximate coasting distance to a stop. The dynamic brake time constant  $\tau$  varies with the servo motor and machine operation speeds. (Refer to (1) of this section.) A working part generally has a friction force. Therefore, actual coasting distance will be shorter than a maximum coasting distance calculated with the following equation.

Dynamic Brake Operation Diagram

$$L_{\max} = \frac{V_0}{60} \times \left\{ t_e + \tau \left( 1 + \frac{J_L}{J_M} \right) \right\} \dots \dots \dots (7.1)$$

- $L_{\max}$  : Maximum coasting distance ..... [mm]
- $V_0$  : Machine's fast feed speed ..... [mm/min]
- $J_M$  : Moment of inertia of the servo motor ..... [ $\times 10^{-4} \text{kg}\cdot\text{m}^2$ ]
- $J_L$  : Load moment of inertia converted into equivalent value on servo motor shaft ..... [ $\times 10^{-4} \text{kg}\cdot\text{m}^2$ ]
- $\tau$  : Dynamic brake time constant ..... [s]
- $t_e$  : Delay time of control section..... [s]

For 7 kW or lower servo, there is internal relay delay time of about 10 ms. For 11 kW to 55 kW servo, there is delay caused by magnetic contactor built into the external dynamic brake (about 50 ms) and delay caused by the external relay.

## Part 7: Common Reference Material

### (3) Electronic dynamic brake

The electronic dynamic brake operates in the initial state for HG series servo motors with a 500 W or smaller capacity.

The time constant "τ" for the electronic dynamic brake will be shorter than that for normal dynamic brake. Therefore, coasting distance will be shorter than in normal dynamic brake.

Series	Servo motor
HG-KR	HG-KR053, HG-KR13, HG-KR23, HG-KR43
HG-MR	HG-MR053, HG-MR13, HG-MR23, HG-MR43
HG-SR	HG-SR51, HG-SR52

### 1.2.5 24 V DC power supply for interface: built-in ⇒ outside supply requisite

These are the recommended specifications for a 24 V DC power source for interface that is required for renewal.

Select according to the following specifications.

Item	MR-J2S series	MR-J2M series	MR-J4 series
For interface 24 V DC power supply	Servo amplifier	/	External supply required 24 V DC ±10%  Power capacity MR-J4-_A_: 500 mA or more MR-J4-_B_: 300 mA or more
	Internal power supply		
	External supply 24 V DC ±10% Power capacity: 80 mA or more	External supply 24 V DC ±10% Power capacity: 300 mA or more	

## Part 7: Common Reference Material

### 1.2.6 Servo setup software: Setup software (SETUP161E) ⇒ MR Configurator2

Item	MR-J2S series	MR-J4 series
Servo setup software	Setup software (SETUP161E) Model: MRZJW3-SETUP161E	MR Configurator2 Model: SW1DNC-MRC2-E

#### (1) MR Configurator2 (SW1DNC-MRC2-E) specification

Item	Description
Project	Create/read/save/delete project, system setting, and print
Parameter	Parameter setting, amplifier axis name setting, parameter converter (Note 1)
Positioning data (Note 2)	Point table, program, indirect addressing
Monitor	Display all, I/O monitor, graph, and ABS data display
Diagnostics	Alarm display, alarm onset data display, drive recorder, display of the reason for no rotation, system configuration, life diagnosis, machine diagnosis.
Test operation	Jog operation, positioning operation, motor-less operation, DO forced output, and program operation, test operation event information, single-step feed (Note 2)
Adjustment	One-touch tuning, tuning, and machine analyzer
Others	Servo assistant, parameter setting range update, help display, connection to MITSUBISHI ELECTRIC FA Global Website

- Note 1. This function is available only in standard control mode.  
 2. SW1DNC-MRC2-E supports only MR-J4- \_A\_-RJ.

#### (2) System configuration

For servo setup software components, refer to the Instruction Manual.

### 1.2.7 Communication I / F: RS-232C ⇒ USB

For connection with PC-AT compatible personal computer

Item	MR-J2S series	MR-J4 series
Communication cable	RS-232C communication MR-CPCATCBL3M Cable length: 3 m	USB communication MR-J3USBCBL3M Cable length: 3 m

## Part 7: Common Reference Material

### 1.2.8 Servo amplifier initializing time

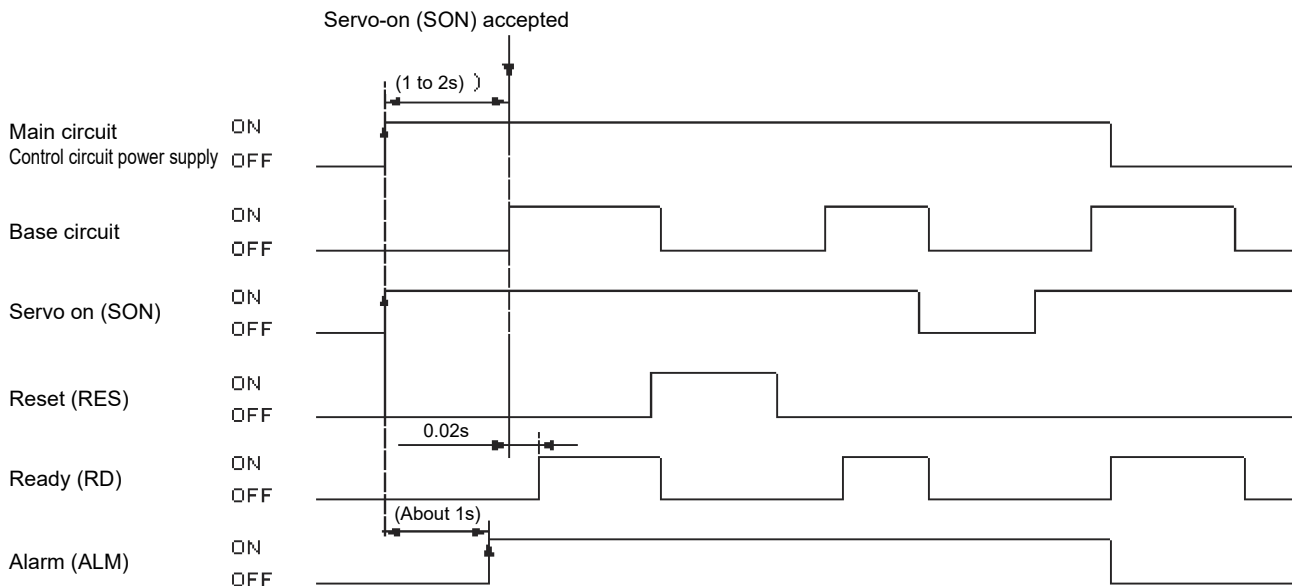

This section explains the initializing time of the servo amplifier (the time taken between power-on and servo-on reception). The initializing time is 2 s at maximum for the MR-J2S- A servo amplifier, but 3.5 s at maximum for the MR-J4- A servo amplifier. Note the initializing time difference upon replacement.

<Points to note upon replacement>

- (1) When using the electromagnetic brake to prevent a drop in a vertical lift application or the like with an external timer to adjust the brake release time, the lift may drop due to a longer servo-lock time. Adjust the brake release time as necessary or use MBR (electromagnetic brake interlock signal).
- (2) A longer servo-on time at power-on may cause a delay in the servo motor starting time after power-up. Please take note.

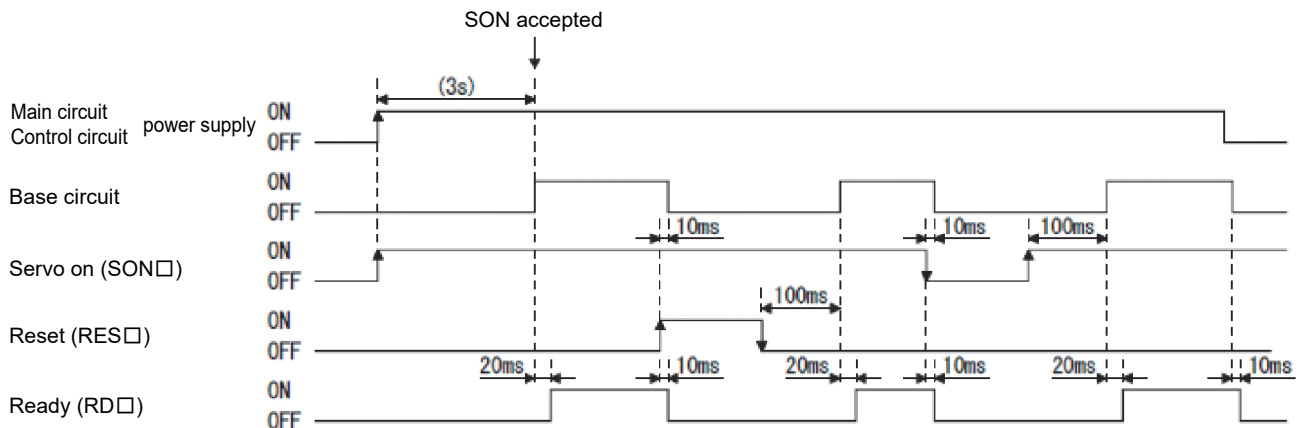

#### (1) MR-J2S- A\_ series servo amplifier

The initializing time is 1 to 2 s.

#### (2) MR-J2M-P8A series servo amplifier

The initializing time is 3 s.

## Part 7: Common Reference Material

### (3) MR-J2S-\_B\_ series servo amplifier

The initializing time is 3 to 4 s.

### (4) MR-J2M-P8B series servo amplifier

The initializing time is 4 s.

### (5) MR-J4-\_A\_ / MR-J4-\_B\_ series servo amplifier

The initializing time is 2.5 to 3.5 s.

## Part 7: Common Reference Material

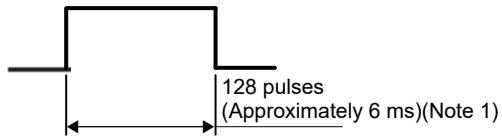

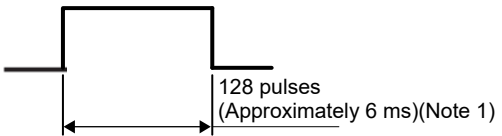

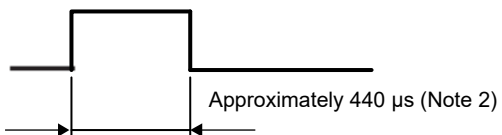

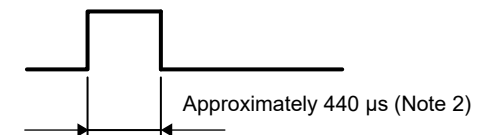

### 1.2.9 The pulse width of the encoder Z-Phase pulse

Note that the pulse width and start-up timing of the encoder Z-phase pulse signal (OP) output from the servo amplifier are different between the MR-J2S / MR-J2M series and the MR-J4 series.

<Precautions>

\* Always reset the home position upon replacement.

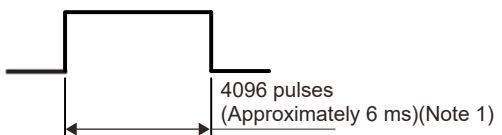

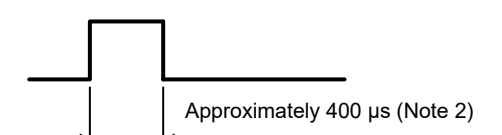

<Servo amplifier replacement>

	MR-J2S/MR-J2M series	MR-J4 series
At low speed Lower than approximately 130 r/min	128/131,072 pulses  128 pulses (Approximately 6 ms)(Note 1)	128/131,072 pulses  128 pulses (Approximately 6 ms)(Note 1)
At high speed Approximately 130 r/min or higher	Approximately 440 μs fixed  Approximately 440 μs (Note 2)	Approximately 440 μs fixed  Approximately 440 μs (Note 2)

Note 1. This is the pulse width when the servo motor rotates at 10 r/min. The time for the pulse width varies depending on the number of the servo motor revolutions.

2. Pulse width =  $128 \times (60 / (\text{servo motor speed} \times 131072)) \times 10^6$  [μs]

<Simultaneous replacement>

	HG-KR, MR, SR motor
At low speed Lower than approximately 130 r/min	4,096/4,194,304 pulses  4096 pulses (Approximately 6 ms)(Note 1)
At high speed Approximately 130 r/min or higher	Approximately 400 μs fixed  Approximately 400 μs (Note 2)

Note 1. This is the pulse width when the servo motor rotates at 10 r/min. The time for the pulse width varies depending on the number of the servo motor revolutions.

2. Pulse width =  $4096 \times (60 / (\text{servo motor speed} \times 4194304)) \times 10^6$  [μs]

## Part 7: Common Reference Material

### 2. SERVO AMPLIFIER DIMENSIONS/ATTACHMENT DIFFERENCES

#### 2.1 MR-J2S ⇒ MR-J4 Comparison Table of Servo Amplifier Dimensions/Installation Differences

##### 2.1.1 General-purpose interface/SSCNET interface 200 V class (22 kW or less)

The following table shows comparison of the MR-J2S series and MR-J4 series dimensions. The height and width of the MR-J4 series are the same or smaller than the MR-J2S series basically. The depth is larger for the 400 W and 600 W capacities. The replacements for 1 kW or less capacity types are possible using the same mounting holes. The number of mounting screws is different for the 2 kW and 3.5 kW capacities, and the mounting screw distance is different for the 5 kW to 22 kW capacities. The screw sizes are different for the 11 kW and 15 kW capacities. (Refer to the comparison of dimensions.)

Comparison of dimensions (comparison between the same capacity types) Unit: mm

Model MR-J2S series	Model MR-J4 series	Height		Width		Depth		Mounting screw pitch				
		MR-J2S	MR-J4	MR-J2S	MR-J4	MR-J2S	MR-J4	MR-J2S	MR-J4			
MR-J2S-10_	MR-J4-10_	168	168	50	<b>40</b>	135	135	156 (Vertical) (2 screws)	156 (Vertical) (2 screws)			
MR-J2S-20_	MR-J4-20_			70								
MR-J2S-40_	MR-J4-40_											<b>170</b> (Note 1)
MR-J2S-60_	MR-J4-60_			90	90	<b>60</b>	190			<b>185</b>	156 (Vertical)/ 42 (Horizontal) (3 screws)	156 (Vertical)/ 42 (Horizontal) (3 screws)

## 2.1.7 General-purpose interface drive unit/SSCNET interface drive unit 400 V class (30 kW or more)

The following table shows comparison of the MR-J2S series and MR-J4 series dimensions. The height and width of the MR-J4 series are the same or smaller than the MR-J2S series basically. The depth will increase when a heat sink is placed in a cabinet. For the mounting dimensions, the mounting screw pitch and screw sizes will be changed. (Refer to the comparison of dimensions.)

Comparison of dimensions (comparison between the same capacity types) Unit: mm

Model MR-J2S series	Model MR-J4 series	Height		Width		Depth		Mounting screw pitch	
		MR-J2S	MR-J4	MR-J2S	MR-J4	MR-J2S	MR-J4	MR-J2S	MR-J4
MR-J2S-30K_4	MR-J4-DU30K_4	500	380	380	240	300	200 (328) (Note)	480 (Vertical)/ 290 (Horizontal) (4 screws)	360 (Vertical)/ 120 (Horizontal) (4 screws)
MR-J2S-37K_4	MR-J4-DU37K_4			450	300			480 (Vertical)/ 360 (Horizontal) (4 screws)	360 (Vertical)/ 260 (Horizontal) (4 screws)
MR-J2S-45K_4	MR-J4-DU45K_4								
MR-J2S-55K_4	MR-J4-DU55K_4								
MR-HP55KA4	MR-CR55K4			200				480 (Vertical)/ 110 (Horizontal) (4 screws)	

Note. The values in the parentheses are applied to when a heat sink is placed in a cabinet. Pay attention to the depth.

- Dimensions with differences are **shown with shading**.

### 2.2 MR-J2M- ⇒ MR-J4- Comparison Table of Servo Amplifier Dimensions/Installation Differences

The following table shows comparison of the MR-J2M series and MR-J4 series dimensions. The width of the MR-J4 series is the same or smaller than the MR-J2M series. The depth is larger for the 400 W and 750 W capacities. Note that the height is larger for all the capacities. Mounting dimensions of the both series are significantly different. Please take note.

Comparison of dimensions (comparison between the same capacity types) Unit: mm

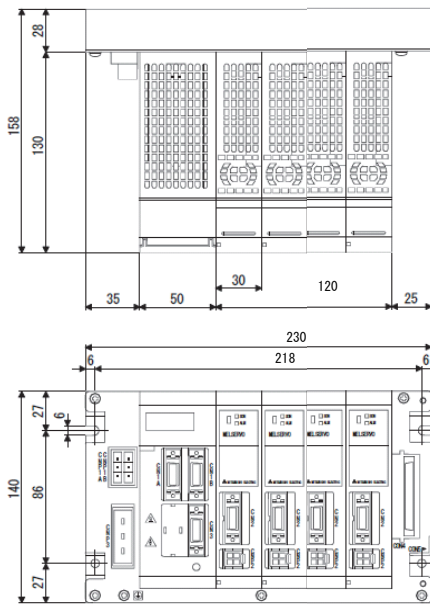

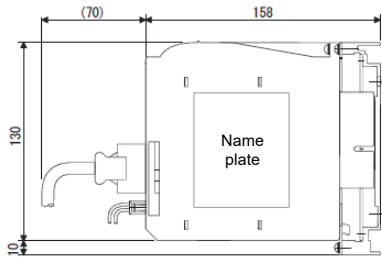

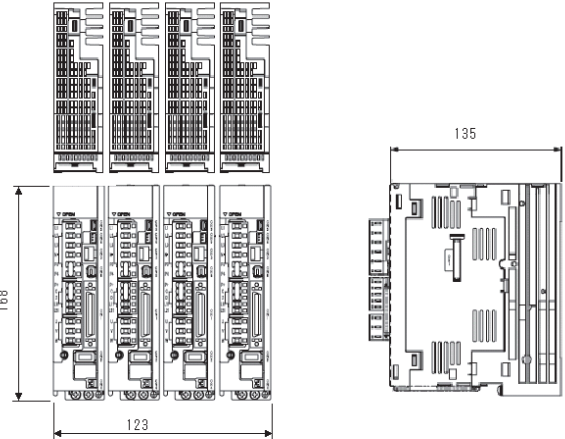

Model MR-J2M series	Model MR-J4 series	Height		Width		Depth		Mounting screw pitch		
		MR-J2M	MR-J4	MR-J2M	MR-J4	MR-J2M	MR-J4	MR-J2M	MR-J4

## 2.3 MR-J2S-\_A\_/MR-J2S-\_CP\_/MR-J2S-\_CL\_ Parameter Diversion Procedure

### 2.3.1 Operation procedure of parameter conversion

The parameter converter function of MR Configurator2 allows the servo parameters of MR-J2S-\_A\_/MR-J2S-\_CP\_/MR-J2S-\_CL\_ to be changed to the servo parameters of MR-J4-\_A\_(-RJ).  
 (Conversion of MR-J2S-\_A\_: version 1.12N or more; conversion of MR-J2S-\_CP\_/CL\_: version 1.25B or more)

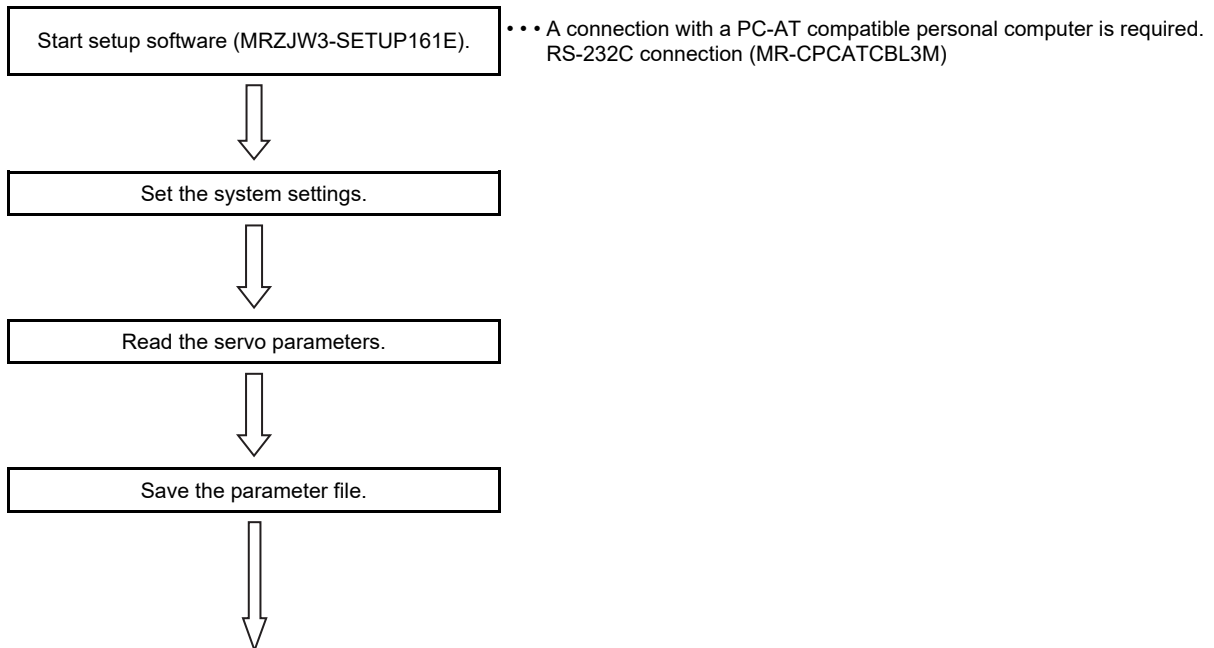

## Part 7: Common Reference Material

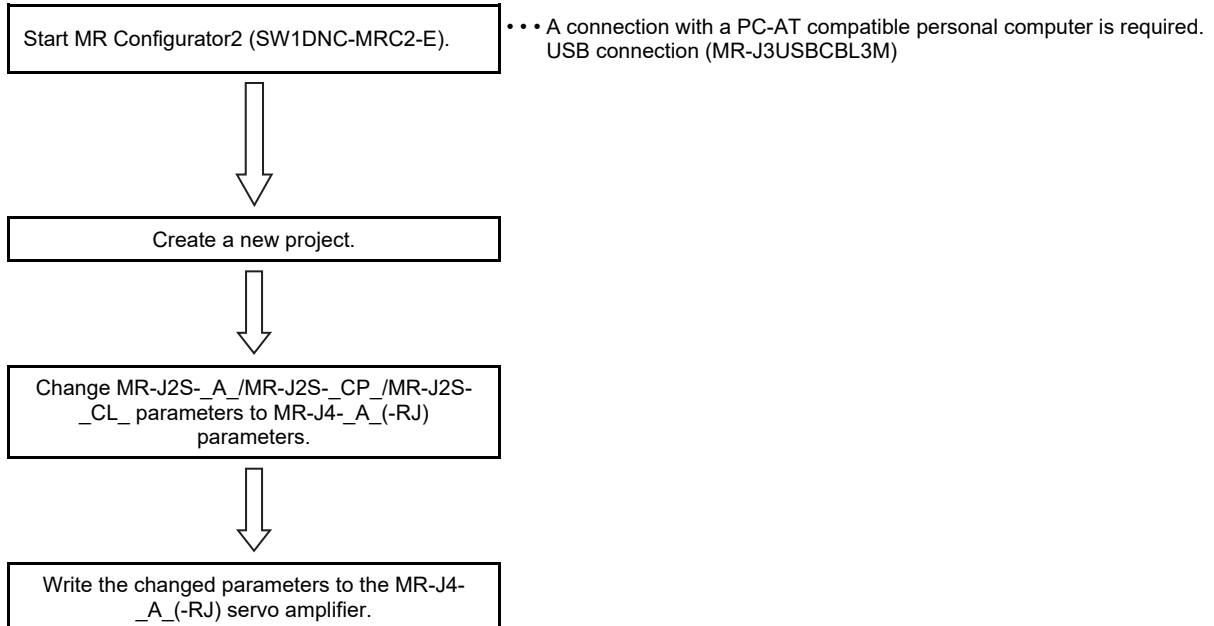

---

### 2.3.2 MR-J2S-\_A\_/MR-J2S-\_CP\_/MR-J2S-\_CL\_ parameter diversion procedure

- Parameter reading from the servo amplifier MR-J2S-\_A\_/MR-J2S-\_CP\_/MR-J2S-\_CL\_

- Converting the parameters of MR-J2S-\_A\_/MR-J2S-\_CP\_/MR-J2S-\_CL\_ and writing them to the MR-J4-\_A\_(-RJ) servo amplifier

## Part 7: Common Reference Material

---

### 2.3.3 Parameter reading from the servo amplifier MR-J2S-\_A\_/MR-J2S-\_CP\_/MR-J2S-\_CL\_

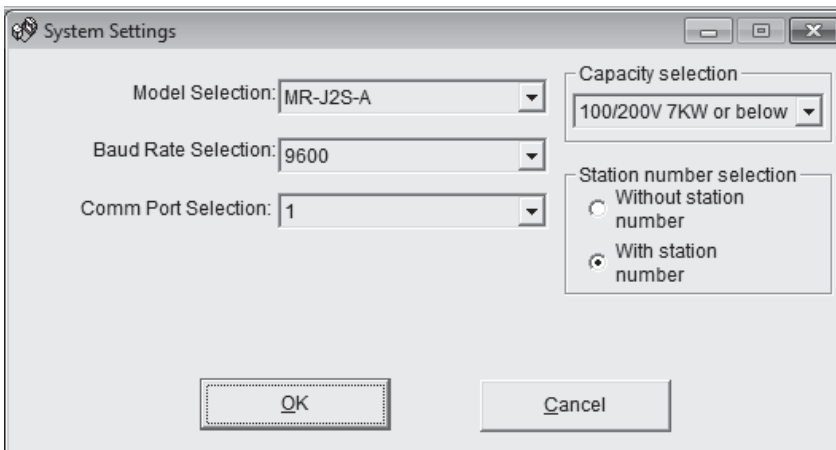

- (1) Start the setup software (MRZJW3-SETUP161E).

- (2) Set the system settings.

Click [System] in the menu to display the system settings dialog box.

Set the Model Selection, Baud Rate Selection, Comm Port Selection, Capacity selection, and Station number selection.

## Part 7: Common Reference Material

(3) Read the servo parameters.

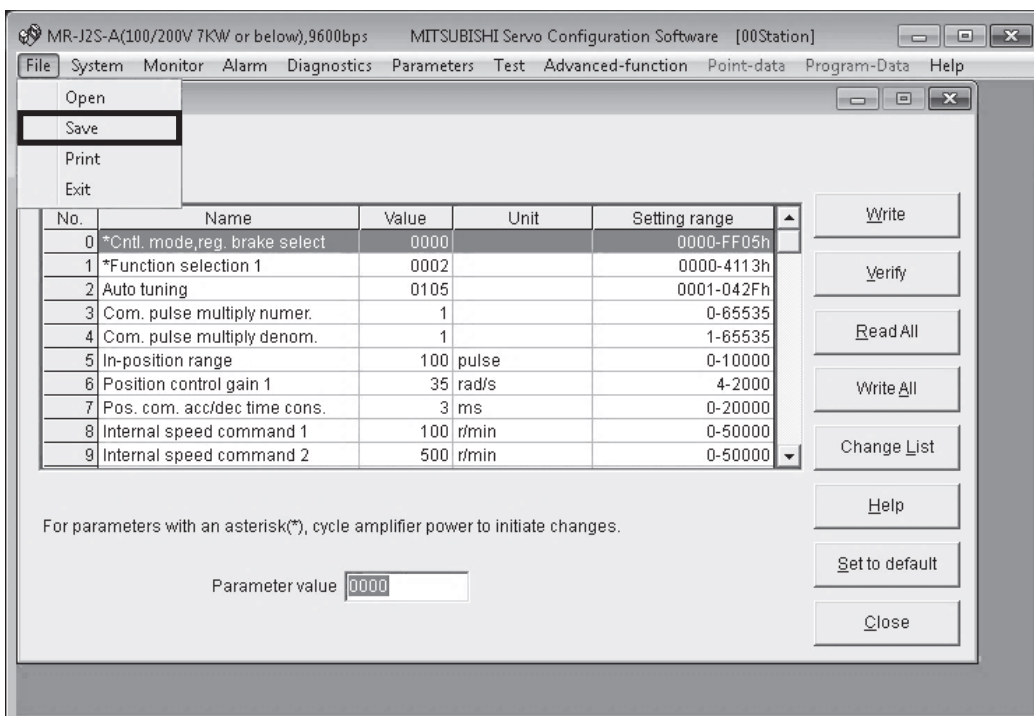

Click [Parameters] in the menu to display the parameter list screen.

Connect the MR-J2S-\_A\_/MR-J2S-\_CP\_/MR-J2S-\_CL\_ servo amplifier to a personal computer and click the [Read All] button.

Change the setting value of [Pr. PA19 Parameter writing inhibit] to "000E" and click the [Write] button. Then turn off/on the power of the servo amplifier.

Click the [Read All] button again to extend the display range of parameter numbers and display the parameters in the list of parameters.

After reading the parameters is completed, Select [File] - [Save] to save the parameter file. (The work with the setup software (MRZJW3-SETUP161E) is finished.)

## Part 7: Common Reference Material

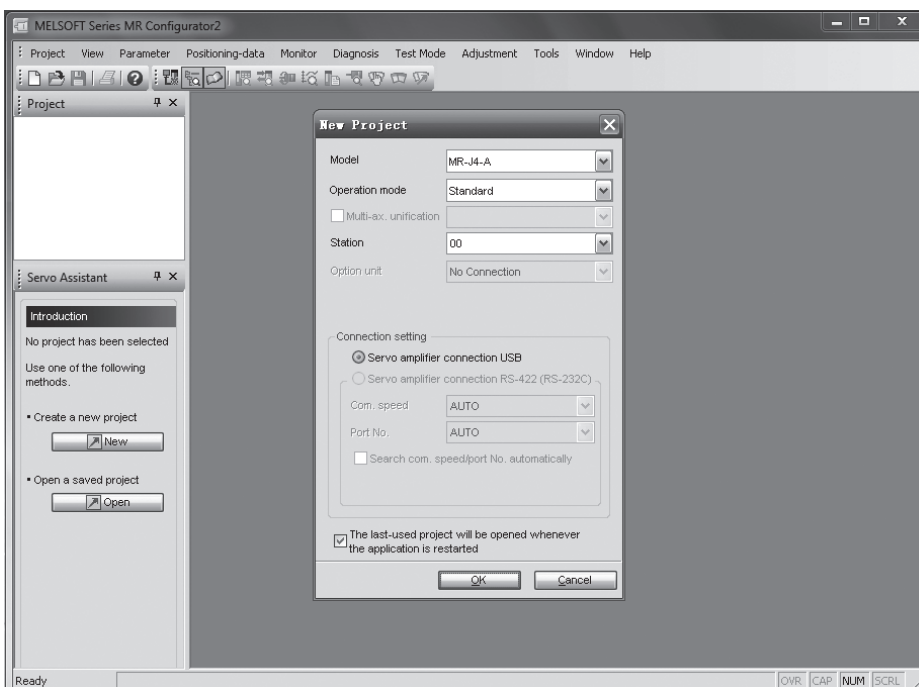

### 2.3.4 Converting the parameters of MR-J2S-\_A\_/MR-J2S-\_CP\_/MR-J2S-\_CL\_ and writing them to the MR-J4-\_A\_(-RJ) servo amplifier

(1) Start MR Configurator2 (SW1DNC-MRC2-E).

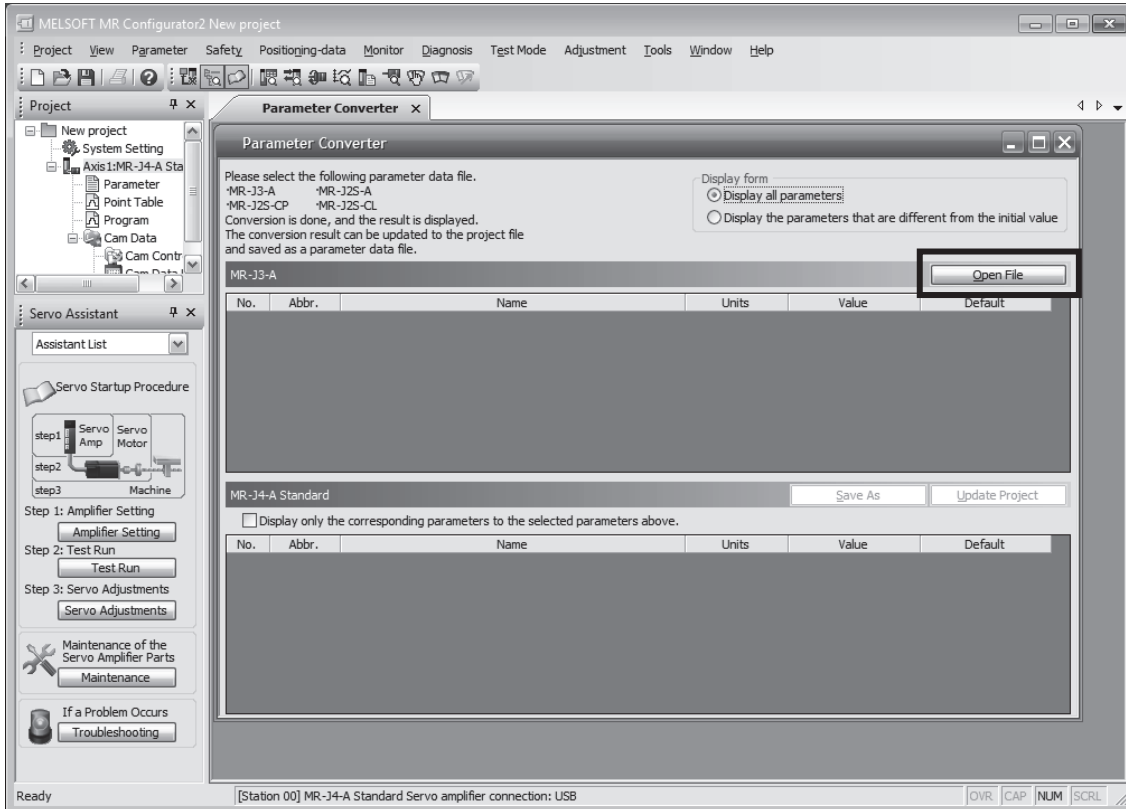

(2) Create a new project.

Select [Project] - [New] from the menu to display the New Project dialog box. Select "MR-J4-A(-RJ)" for Model.

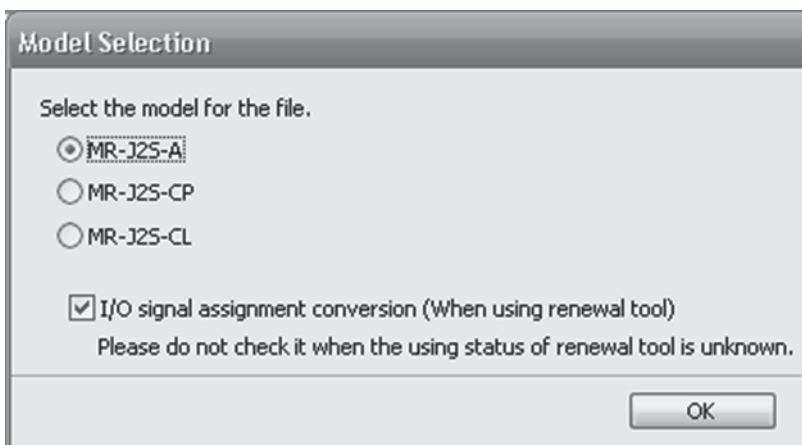

## Part 7: Common Reference Material

- (3) Change MR-J2S-\_A\_/MR-J2S-\_CP\_/MR-J2S-\_CL\_ parameters to MR-J4-\_A\_(-RJ) parameters. Select [Parameter] - [Parameter Converter] from the menu to display the parameter converter screen. Then click the [Open file] button and specify the user file that was saved with the setup software (MRJZW3-SETUP161E) with the operation in (3) of Section 2.3.3.

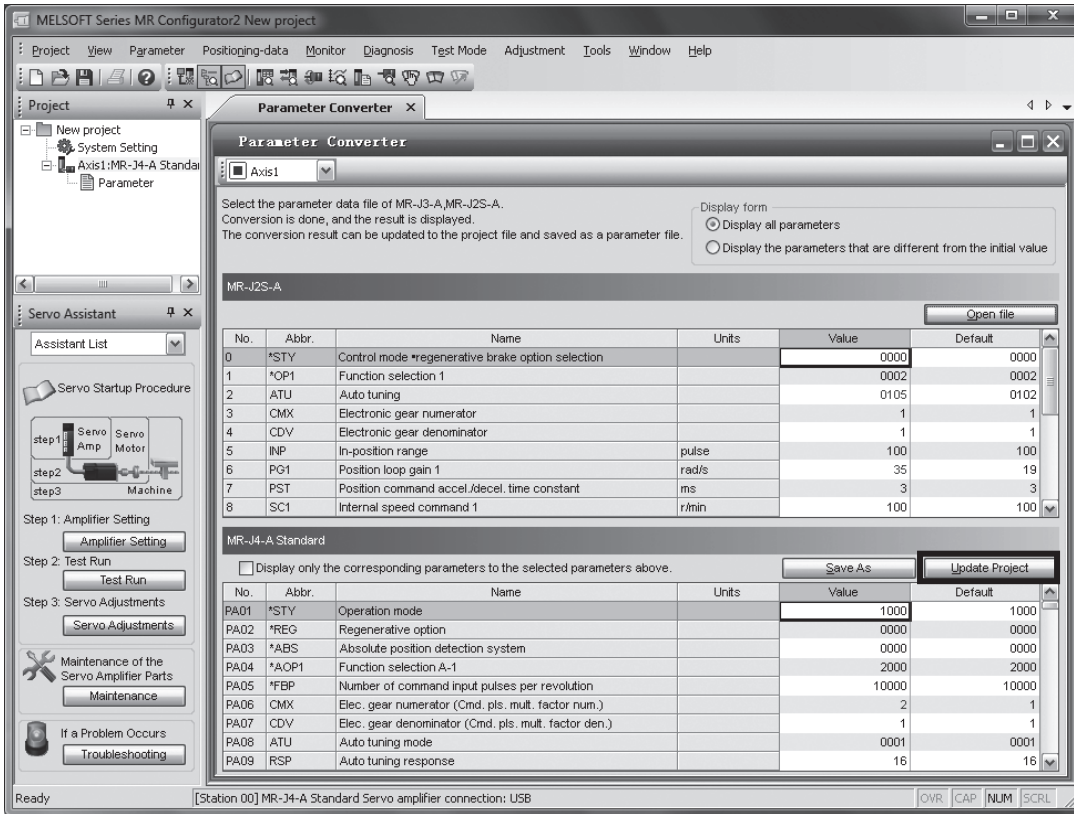

Designate the source model, since the Model Selection window appears when a user file is designated.

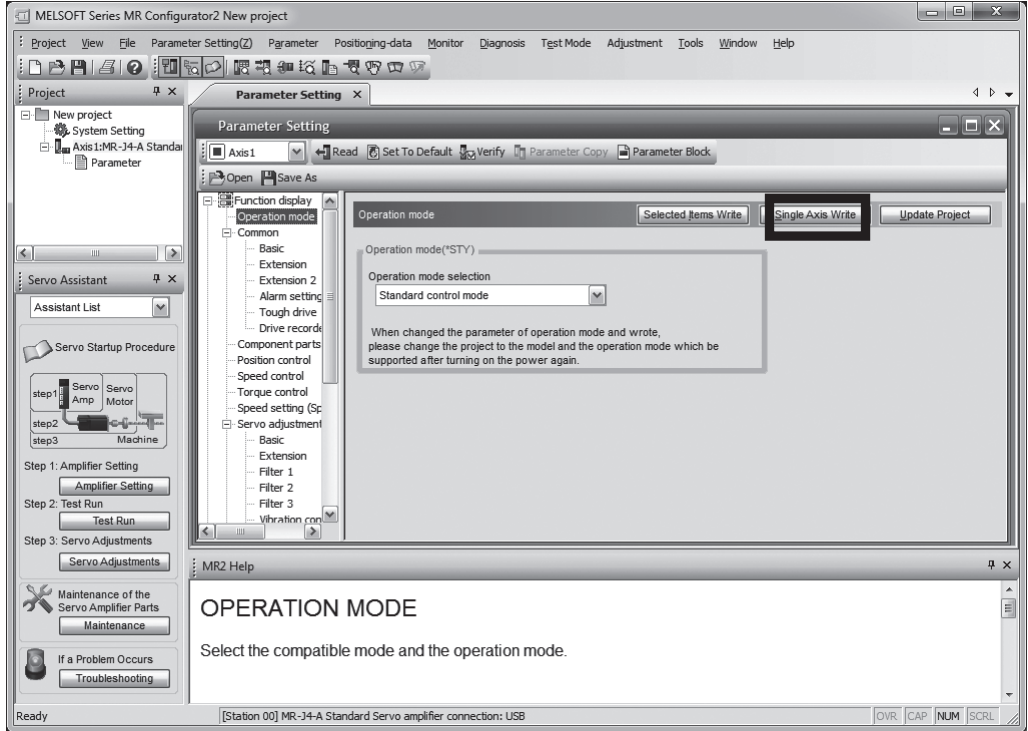

# Part 7: Common Reference Material

Click [Update Project].

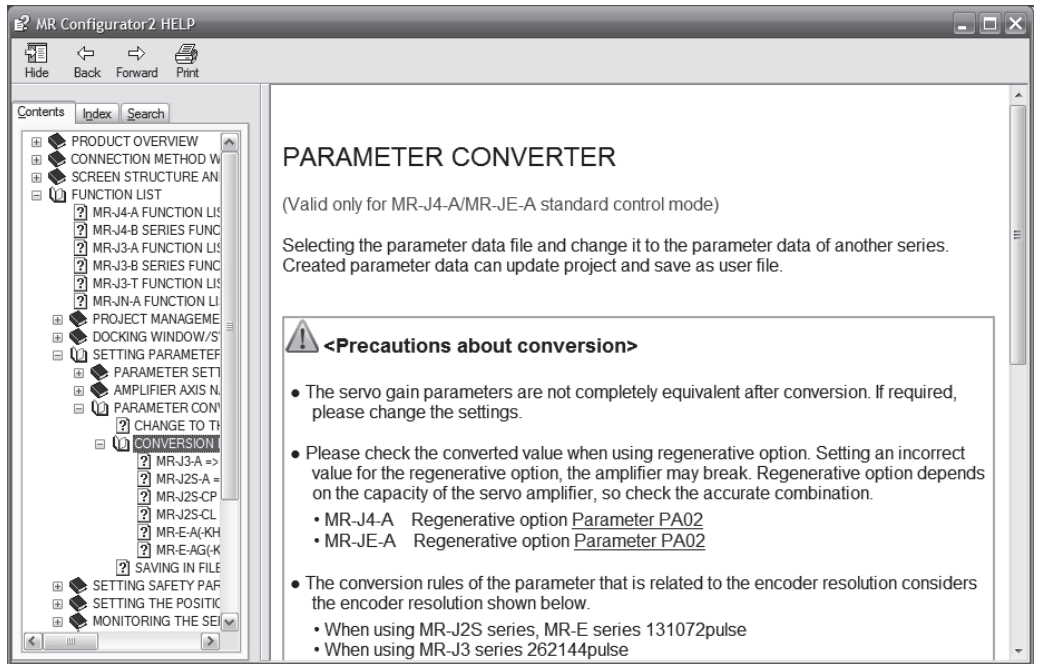

# Part 7: Common Reference Material

- (4) Write the changed parameters to the MR-J4-\_A\_(-RJ) servo amplifier.  
 Select [Parameter] - [Parameter Setting] from the menu to display the parameter setting screen.  
 Connect the MR-J4-\_A\_(-RJ) servo amplifier to a personal computer and click the [Single Axis Write] button. The parameter values will be written to the MR-J4-\_A\_(-RJ) servo amplifier.

Note: The servo gain is not perfectly equal.

Refer to the MR Configurator2 (SW1DNC-MRC2-E) help for details.

## Part 7: Common Reference Material

### 2.3.5 Conversion rules

POINT
<ul style="list-style-type: none"><li>● The conversion rules in this section give due consideration to compatibility. However, the servo parameter system of MR-J2S-<u>  </u>_A_ / MR-J2S-<u>  </u>_CP_ / MR-J2S-<u>  </u>_CL_ and that of MR-J4-<u>  </u>_A_ are so different that the rules may not sufficiently apply to cases of special operation (including special specifications). Change the settings as necessary in such cases.</li><li>● The value of [Pr. PA19 Parameter writing inhibit] after parameter conversion is the initial value.<ul style="list-style-type: none"><li>• MR-J4-<u>  </u>_A_ : [Pr. PA19] = "00AAh"</li></ul></li><li>● When using analog monitor output, perform an operation check because MR-J2S-<u>  </u>_A_ / MR-J2S-<u>  </u>_CP_ / MR-J2S-<u>  </u>_CL_ and MR-J4-<u>  </u>_A_ have different output voltage specifications for droop pulses.<ul style="list-style-type: none"><li>• MR-J4-<u>  </u>_A_ : [Pr. PC14] / [Pr. PC15]</li></ul></li><li>● Various offset parameters cannot be converted. Change the settings as necessary.<ul style="list-style-type: none"><li>• MR-J4-<u>  </u>_A_ : [Pr. PC37] to [Pr. PC40]</li></ul></li><li>● When the renewal tool is not used, set the conversion of I/O signal assignment with the parameter converter function to "Disabled". Change the settings or wiring as necessary because the parameters related to I/O signal assignment are not converted. When the renewal tool is used, set the conversion of I/O signal assignment with the parameter converter function to "Enabled". According to the control signal connection of the renewal tool, the parameters related to I/O signal assignment are converted. (For details, refer to section 2.3.5 (1).)<ul style="list-style-type: none"><li>• MR-J4-<u>  </u>_A_ : [Pr. PD03] to [Pr. PD28]</li></ul></li><li>● The following parameters of MR-J4-<u>  </u>_A_ are compatible with the servo amplifier's software version A3 or later. The software version can be checked in the system configuration.<ul style="list-style-type: none"><li>• MR-J4-<u>  </u>_A_ : [Pr. PC21 RS-422 communication function selection]</li></ul></li><li>● The conversion rules apply only to the common parameters of MR-J2S-<u>  </u>_A_ / MR-J2S-<u>  </u>_CP_ / MR-J2S-<u>  </u>_CL_ and MR-J4-<u>  </u>_A_ (-RJ). Additional parameters of MR-J4-<u>  </u>_A_ (-RJ) are set to the initial values of MR-J4-<u>  </u>_A_ (-RJ).</li><li>● The parameter conversion rules are intended for the replacement of "HC-<u>  </u>_FS/HA-<u>  </u>_FS motors" with "HG motors". When using "HC-<u>  </u>_FS/HA-<u>  </u>_FS motors" without being replaced, check and change the "electronic gear setting" and "pulse output". (Refer to (5) in Section 2.3.5 and 4. HC-<u>  </u>_FS/HA-<u>  </u>_FS MOTOR DRIVE.)</li></ul>

## Part 7: Common Reference Material

---

### (1) Conversion with the renewal tool

POINT
● I/O signal assignment can be converted with MR Configurator2 of version 1.53F or later.
● I/O signal assignment cannot be converted with the parameter converter function because the renewal tool is not available for MR-J2S- <u>CL</u> .

When MR-J2S series servo amplifiers are replaced with MR-J4 series servo amplifiers using the renewal tool, the parameters related to I/O signal assignment can be converted according to the control signal connection of the renewal tool when the conversion of I/O signal assignment with the parameter converter function is set to "Enabled".

However, the following restrictions may be applied depending on the model of servo amplifiers to be replaced.

#### 1) Restrictions for MR-J2S-A

When the following function is used, you cannot use the renewal tool because there is no compatibility of signal connections of the renewal tool. Set the conversion of I/O signal assignment with the parameter converter function to "Disabled". Refer to Part 2 Section 3.3 "Comparison of Standard Connection Diagrams" and consider laying new cables or changing the parameter setting.

a) Alarm code output setting: [Pr. 49]

#### 2) Restrictions for MR-J2S-CP

When the following function is used, you cannot use the renewal tool because there is no compatibility of signal connections of the renewal tool. Set the conversion of I/O signal assignment with the parameter converter function to "Disabled". Refer to Part 4 Section 3.3 "Comparison of Standard Connection Diagrams" and consider laying new cables or changing the parameter setting.

a) Alarm code output setting: [Pr. 59]

b) CN1A-19 pin setting (on the device assignment setting of the setup software (SETUP161E))

## Part 7: Common Reference Material

### (2) Parameters that need to be checked after parameter conversion

Parameter number	Name	Initial value	Setting value	Description
PA04	Function selection A-1	2000h	0__h	Forced stop deceleration function selection To configure the same settings as those for MR-J2S- _A_/MR-J2S- <u>CP</u> /MR-J2S- <u>CL</u> _, select "Forced stop deceleration function disabled (EM1)".
PA09	Auto tuning response	-	-	Auto tuning response setting Adjust the gain value again after the replacement.
PA11	Forward rotation torque limit	100.0	-	If using a servo motor different from the one that had been used before servo amplifier replacement, review the setting value of this servo parameter as necessary because the servo motor specifications are also different. The settings do not need to be changed if the servo motor is not replaced.
PA12	Reverse rotation torque limit	100.0	-	
PA15	Encoder output pulse	-	-	When the encoder output pulse setting is a dividing ratio setting, this must be adjusted to match the number of pulses per servo motor rotation. The parameter converter function converts MR-J2S- _A_/MR-J2S- <u>CP</u> /MR-J2S- <u>CL</u> _ to 131072 [pulses] and MR-J4- <u>A</u> -(-RJ) to 4194304 [pulses]. Restore this to the value of the model of the target servo amplifier to be replaced in the case of servo amplifier replacement.
PC14	Analog monitor 1 output	-	-	Not converted by the parameter converter function.
PC15	Analog monitor 2 output	-	-	Set the value as required.
PC35	Internal torque limit 2	100.0	-	If using a servo motor different from the one that had been used before servo amplifier replacement, review the setting value of this servo parameter as necessary because the servo motor specifications are also different. The settings do not need to be changed if the servo motor is not replaced.
PC37	Analog speed command offset/ Analog speed limit offset	-	-	Not converted by the parameter converter function. Set the value as required.
PC38	Analog torque command offset/ Analog torque limit offset	-	-	Set the value as required.
PC39	Analog monitor 1 offset	-	-	Set the value as required.
PC40	Analog monitor 2 offset	-	-	Set the value as required.
PD01	Input signal automatic on selection 1	-	1__h	EM2 (Forced stop 2)/EM1 (Forced stop 1) input signal automatic on Set this item only when converting the parameters of MR- J2S- <u>CP</u> /MR-J2S- <u>CL</u> _. This setting is not required for conversion from MR- J2S- <u>A</u> _.
PD03 to PD28	I/O device selection	-	-	Not converted by the parameter converter function. For MR-J2S- <u>A</u> /MR-J2S- <u>CP</u> _, this parameter can be converted according to the control signal connection of the renewal tool when conversion of I/O signal assignment is enabled. However, only MR Configurator2 of version 1.53F or later is available.
PD34	Function selection D-5	-	-	Alarm code output This parameter is not converted by the parameter converter function. Set the value as required.

Note 1. For items that have no setting values listed in the table, refer to "Part 2: Review on Replacement of MR-J2S-A\_ with MR-J4-A\_" and "Part 4: Review on Replacement of MR-J2S-CP/MR-J2S-CL\_ with MR-J4-A-RJ".

## Part 7: Common Reference Material

- (3) Parameter that needs be set when the MR-J2S-CP is replaced with the MR-J4-A-RJ  
 The following parameter needs to be set after the MR-J2S-CP is replaced with the MR-J4-A-RJ.

Parameter number	Name	Initial value	Setting value	Description
PA01	Operation mode	1 0 0 0h	___ 6h	Select the servo amplifier control mode. Select the positioning mode (point table method). When MR Configurator2 of version 1.51D or later is used, this parameter will be converted by the parameter converter function. Thus, this setting is not required.

- (4) Parameter that needs be set when the MR-J2S-CL is replaced with the MR-J4-A-RJ  
 The following parameter needs to be set after the MR-J2S-CL is replaced with the MR-J4-A-RJ.

Parameter number	Name	Initial value	Setting value	Description
PA01	Operation mode	1 0 0 0h	___ 7h	Select the servo amplifier control mode. Select the positioning mode (program method). When MR Configurator2 of version 1.51D or later is used, this parameter will be converted by the parameter converter function. Thus, this setting is not required.

- (5) Parameters that need to be set when the HC/HA series servo motor is used without being replaced  
 1) When the model of a servo amplifier after replacement is MR-J4-A

Parameter number	Name	Initial value	Setting value	Description
PA05	Number of command input pulses per revolution	-	-	Number of command input pulses per revolution Use the initial value only after replacement of MR-J2S- <u>A</u> . This setting is not required after replacement of MR-J2S- <u>CP</u> /MR-J2S- <u>CL</u> .
PA06	Electronic gear numerator	-	-	When an electronic gear is used, the setting value needs to be changed. Set the electronic gear setting value of the existing servo amplifier.
PA07	Electronic gear denominator	-	-	When a geared servo motor is replaced, the actual reduction ratio may differ before and after the replacement. If the ratio differs after the replacement, set the values considering the actual reduction ratio.
PA09	Auto tuning response	-	-	Auto tuning response setting Adjust the gain value again after the replacement.
PA15	Encoder output pulses	-	-	When the output dividing ratio setting has been selected, use the value of an existing servo amplifier.
PA21	Function selection A-3	-	-	Electronic gear selection Use the initial value.
PC22	Function selection C-1 Encoder setting selection	-	_ 1 _	Select "1: MR-J2S compatible encoder setting".
PT14	Backlash compensation	-	-	Set the backlash compensation of the existing servo amplifier.

## Part 7: Common Reference Material

### (6) Conversion rules (MR-J2S-\_\_A\_\_ => MR-J4-\_\_A\_\_)

The following table shows the parameter conversion rules from MR-J2S-\_\_A\_\_ to MR-J4-\_\_A\_\_.  
Parameters not specified in the following table will be set to their initial values.

MR-J2S-__A__			MR-J4-__A__			Conversion rule	
No.	Name	Type	Target	No.	Type		Target
0	Control mode and regenerative option selection	Hex	__ __ X	PA01	Hex	__ __ X	The setting value will be maintained.
			XX __	PA02	Hex	__ XX	00 __ will be changed to __ 00. 01 __ will be changed to __ 01. 02 __ will be changed to __ 02. 03 __ will be changed to __ 03. 04 __ will be changed to __ 04. 05 __ will be changed to __ 05. 06 __ will be changed to __ 06. 08 __ will be changed to __ 08. 09 __ will be changed to __ 09. 0E __ will be changed to __ FA. 82 __ will be changed to __ 82. 83 __ will be changed to __ 83. 84 __ will be changed to __ 84. 85 __ will be changed to __ 85. 87 __ will be changed to __ 81. Otherwise, __ 00 will be set.
1	Function selection 1	Hex	X __ __	PA03	Hex	__ __ X	0 __ __ will be changed to __ __ 0. 1 __ __ will be changed to __ __ 1. Otherwise, __ __ 0 will be set.
			__ X __	PD27	Hex	__ XX	__ 0 __ will be changed to __ 03. __ 1 __ will be changed to __ 06. When conversion of I/O signal assignment is enabled, this parameter will be converted according to the control signal connection of the renewal tool. When conversion of I/O signal assignment is not enabled, the initial value will be used. This parameter can be used with MR Configurator2 of software version 1.53F or later.
			__ __ X	PD24	Hex	__ XX	__ 0 __ will be changed to __ 0C. (ZSP) __ 1 __ will be changed to __ 05. (MBR) When conversion of I/O signal assignment is enabled, this parameter will be converted according to the control signal connection of the renewal tool. When conversion of I/O signal assignment is not enabled, the initial value will be used. This parameter can be used with MR Configurator2 of software version 1.53F or later.
			__ __ __ X	PD29	Hex	__ __ __ X	__ __ __ 1 will be changed to __ __ __ 2. __ __ __ 2 will be changed to __ __ __ 4. __ __ __ 3 will be changed to __ __ __ 4. Otherwise, the setting value will be maintained.

### (7) Conversion rules (MR-J2S-CP => MR-J4-A-RJ)

The following table shows the parameter conversion rules from MR-J2S-CP to MR-J4-A-RJ.  
Parameters not specified in the following table will be set to their initial values.

MR-J2S-CP				MR-J4-A-RJ			Conversion rule
No.	Name	Type	Target	No.	Type	Target	
0	Command method and regenerative option selection	Hex	__X_	PT01	Hex	___X	__2_ will be changed to ___0. Otherwise, the setting value will be maintained.
			XX__	PA02	Hex	__XX	00__ will be changed to __00. 01__ will be changed to __01. 02__ will be changed to __02. 03__ will be changed to __03. 04__ will be changed to __04. 05__ will be changed to __05. 06__ will be changed to __06. 08__ will be changed to __08. 09__ will be changed to __09. Otherwise, __00 will be set.
1	Feeding function selection	Hex	___X	PA14	Dec	-	The hexadecimal number is converted to decimal.
			__X_	PT03	Hex	___X	The setting value will be maintained.
			_X__		Hex	__X_	The setting value will be maintained.
			X___	PT02	Hex	___X	The setting value will be maintained.
2	Function selection 1	Hex	___X	PD29	Hex	___X	The setting value will be maintained.
			X___	PA03	Hex	___X	The setting value will be maintained.
3	Auto tuning	Hex	___X	PA09	Dec	-	___1 will be changed to 8. ___2 will be changed to 11. ___3 will be changed to 13. ___4 will be changed to 14. ___5 will be changed to 16. ___6 will be changed to 18. ___7 will be changed to 19. ___8 will be changed to 21. ___9 will be changed to 23. ___A will be changed to 25. ___B will be changed to 27. ___C will be changed to 28. ___D will be changed to 30. ___E will be changed to 32. ___F will be changed to 34. To use the HC/HA series servo motors without being replaced, refer to (5) in Section 2.3.5.
			_X__	PA08	Hex	___X	_4__ will be changed to ___3. Otherwise, the setting value will be maintained.
4	Electronic gear numerator	Dec	-	PA06	Dec	-	(1) When the setting value of No. 4 is _0 131072 will be set. (2) When the setting value of No. 4 is other than 0 the setting value will be maintained. To use the HC/HA series servo motors without being replaced, refer to (5) in Section 2.3.5.
5	Electronic gear denominator	Dec	-	PA07	Dec	-	The setting value will be maintained. To use the HC/HA series servo motors without being replaced, refer to (5) in Section 2.3.5.
6	In-position range	Dec	-	PA10	Dec	-	The setting value will be maintained.
7	Position loop gain 1	Dec	-	PB07	Dec	-	The setting value will be multiplied by 2/3 and one decimal place will be added.
8	Home position return type	Hex	___X	PT04	Hex	___X	The setting value will be maintained.
			__X_		Hex	__X_	The setting value will be maintained.
			_X__	PT29	Hex	___X	The setting value will be maintained.

Hex: hexadecimal parameter; Dec: decimal parameter

## Part 7: Common Reference Material

MR-J2S-CP				MR-J4-A-RJ			Conversion rule
No.	Name	Type	Target	No.	Type	Target	
9	Home position return speed	Dec	-	PT05	Dec	-	The setting value will be maintained.
10	Creep speed	Dec	-	PT06	Dec	-	The setting value will be maintained.
11	Home position shift distance	Dec	-	PT07	Dec	-	The setting value will be maintained.
12	Rough match output range	Dec	-	PT12	Dec	-	The setting value will be maintained.
13	JOG speed	Dec	-	PT13	Dec	-	The setting value will be maintained.
14	S-pattern acceleration/deceleration time constant	Dec	-	PC03	Dec	-	The setting value will be maintained.
15	Station number setting	Dec	-	PC20	Dec	-	The setting value will be maintained.
16	Serial communication function selection - Alarm history clear	Hex	___X	PC21	Hex	__X_	___ 4 will be changed to ___ 0. Otherwise, the setting value will be maintained.
			__X_	PC18	Hex	___X	The setting value will be maintained.
			X___	PC21	Hex	_X__	The setting value will be maintained.
17	Analog monitor output	Hex	___X	PC14	Hex	___X	___ 5 will be changed to ___ E. ___ 9 will be changed to ___ 8. ___ A will be changed to ___ 9. ___ B will be changed to ___ D. Otherwise, the setting value will be maintained.
			_X__	PC15	Hex	___X	_ 5 _ will be changed to ___ E. _ 9 _ will be changed to ___ 8. _ A _ will be changed to ___ 9. _ B _ will be changed to ___ D. Otherwise, the setting value will be maintained.
18	Status display selection	Hex	__XX	PC36	Hex	__XX	__ 0 0 will be changed to __ 2 1. __ 0 1 will be changed to __ 2 2. __ 0 2 will be changed to __ 2 3. __ 0 3 will be changed to __ 2 4. __ 0 4 will be changed to __ 0 0. __ 0 5 will be changed to __ 0 1. __ 0 6 will be changed to __ 0 2. __ 0 7 will be changed to __ 2 7. __ 0 8 will be changed to __ 0 6. __ 0 9 will be changed to __ 0 7. __ 0 A will be changed to __ 0 8. __ 0 B will be changed to __ 0 9. __ 0 C will be changed to __ 0 A. __ 0 D will be changed to __ 0 B. __ 0 E will be changed to __ 0 C. __ 0 F will be changed to __ 0 D. __ 1 0 will be changed to __ 0 E. __ 1 1 will be changed to __ 0 F.
20	Function selection 2	Hex	_X__	PB24	Hex	___X	The setting value will be maintained.
22	Function selection 4	Hex	___X	PD30	Hex	___X	The setting value will be maintained.
24	Feed forward gain	Dec	-	PB04	Dec	-	The setting value will be maintained.
27	Encoder output pulses	Dec	-	PA15	Dec	-	(1) When the setting value of No. 58 is 1 32 times the setting value of No. 27 will be set. (2) When the setting value of No. 58 is other than 1 the setting value of No. 27 will be maintained. To use the HC/HA series servo motors without being replaced, refer to (5) in Section 2.3.5.
58	Function selection 9	Hex	X___				
28	Internal torque limit 1	Dec	-	PA11	Dec	-	One decimal place will be added.
				PA12	Dec	-	One decimal place will be added.
29	Internal torque limit 2	Dec	-	PC35	Dec	-	One decimal place will be added.

Hex: hexadecimal parameter; Dec: decimal parameter

### (8) Conversion rules (MR-J2S-CL\_ => MR-J4-A\_-RJ)

The following table shows the parameter conversion rules from MR-J2S-CL\_ to MR-J4-A\_-RJ.  
Parameters not specified in the following table will be set to their initial values.

MR-J2S-CL_			MR-J4-A_-RJ			Conversion rule	
No.	Name	Type	Target	No.	Type		Target
0	Command method and regenerative option selection	Hex	___X	PT02	Hex	X___	The setting value will be maintained.
			__X_	PT01	Hex	___X	__2 will be changed to ___0. Otherwise, the setting value will be maintained.
			XX__	PA02	Hex	___XX	00__ will be changed to __00. 01__ will be changed to __01. 02__ will be changed to __02. 03__ will be changed to __03. 04__ will be changed to __04. 05__ will be changed to __05. 06__ will be changed to __06. 08__ will be changed to __08. 09__ will be changed to __09. Otherwise, __00 will be set.
1	Feeding function selection	Hex	___X	PA14	Dec	-	The hexadecimal number is converted to decimal.
			__X_	PT03	Hex	___X	The setting value will be maintained.
			_X__		Hex	__X_	The setting value will be maintained.
			X___	PT02	Hex	___X	The setting value will be maintained.
2	Function selection 1	Hex	___X	PD29	Hex	___X	The setting value will be maintained.
			X___	PA03	Hex	___X	The setting value will be maintained.
3	Auto tuning	Hex	___X	PA09	Dec	-	___1 will be changed to 8. ___2 will be changed to 11. ___3 will be changed to 13. ___4 will be changed to 14. ___5 will be changed to 16. ___6 will be changed to 18. ___7 will be changed to 19. ___8 will be changed to 21. ___9 will be changed to 23. ___A will be changed to 25. ___B will be changed to 27. ___C will be changed to 28. ___D will be changed to 30. ___E will be changed to 32. ___F will be changed to 34. To use the HC/HA series servo motors without being replaced, refer to (5) in Section 2.3.5.
			_X__	PA08	Hex	___X	_4__ will be changed to ___3. Otherwise, the setting value will be maintained.
4	Electronic gear numerator	Dec	-	PA06	Dec	-	(1) When the setting value of No. 4 is _0 131072 will be set. (2) When the setting value of No. 4 is other than 0 the setting value will be maintained. To use the HC/HA series servo motors without being replaced, refer to (5) in Section 2.3.5.
5	Electronic gear denominator	Dec	-	PA07	Dec	-	The setting value will be maintained. To use the HC/HA series servo motors without being replaced, refer to (5) in Section 2.3.5.
6	Position end output	Dec	-	PA10	Dec	-	The setting value will be maintained.
7	Position loop gain 1	Dec	-	PB07	Dec	-	The setting value will be multiplied by 2/3 and one decimal place will be added.

Hex: hexadecimal parameter; Dec: decimal parameter

-	-	-	-	PA21	Hex	X _ _ _	3 _ _ _ will be set. To use the HC/HA series servo motors without being replaced, refer to (5) in Section 2.3.5.
-		-	-	PA01	Hex	_ _ _ X	_ _ _ 7 will be set. (Program method)
					Hex	_ _ X _	_ _ 0 _ will be set. (Standard control mode)
					Hex	_ X _ _	_ 0 _ _ will be set.
					Hex	X _ _ _	1 _ _ _ will be set.

Hex: hexadecimal parameter; Dec: decimal parameter

# Part 7: Common Reference Material

## 2.4 MR-J2S-\_B\_ Parameter Diversion Procedure

The parameter converter functions of GX Works2 and MT Developer2 convert the servo parameters of MR-J2S-\_B\_ to those of MR-J4-\_B\_ when the controller is changed.  
(GX Works2: 1.84N or later, MT Developer2: 1.41T or later)

(Target model)

- Positioning module QD75M to Simple Motion module QD77MS/LD77MS
- Motion controller A series/Q17nCPUN to Q17nDSCPU/Q170MSCPU(-S1)

GX Configurator-QP  
SW3RNC-GSVE  
SW6RNC-GSVE

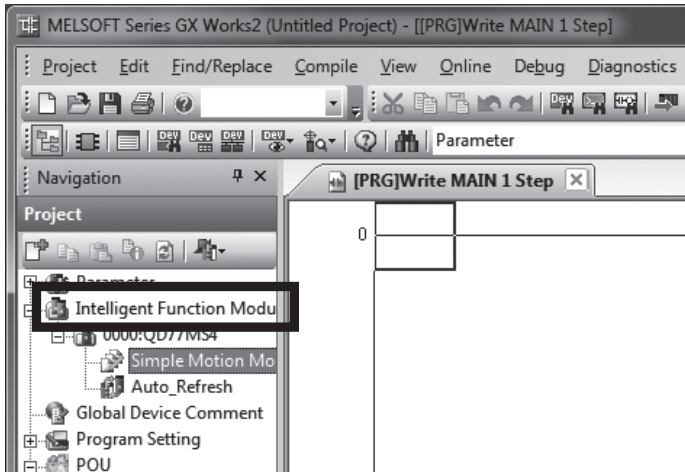

Change MR-J2S-\_B\_ to MR-J4-\_B\_

GX Works2 (Simple Motion module setting tool)  
MT Developer2

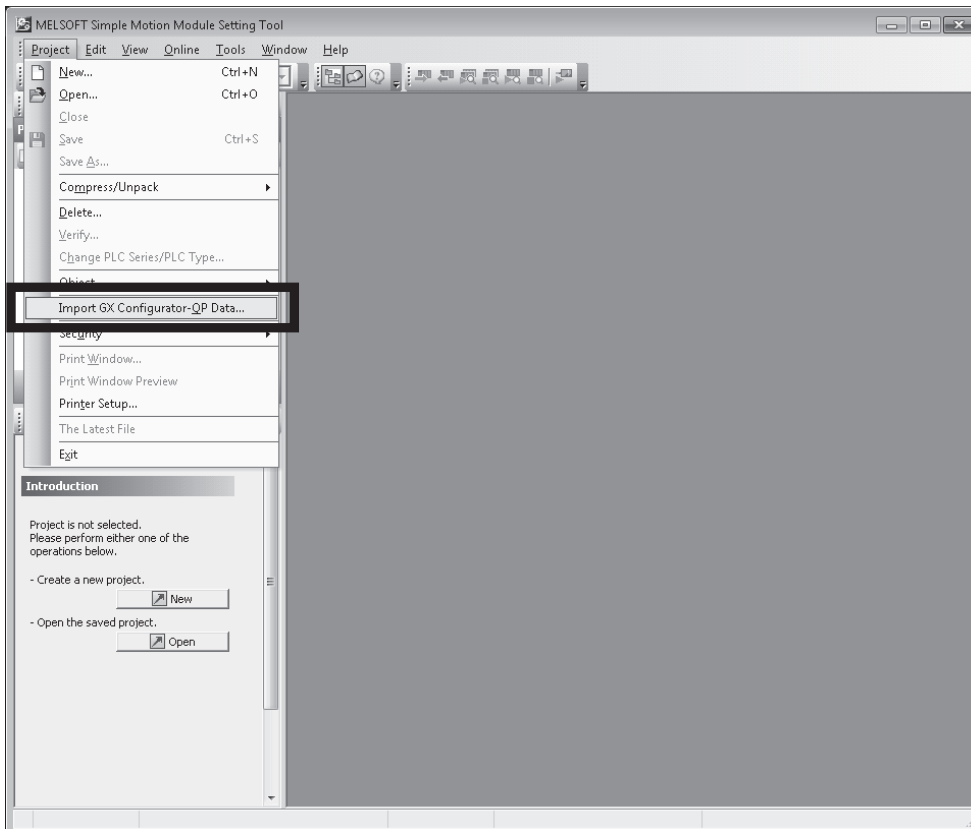

## Part 7: Common Reference Material

### 2.4.1 Changing QD75M to QD77MS/LD77MS

- (1) Start GX Works2 and create a project.
- (2) Right-click [Intelligent Function Module] in the Navigation window and select [New Module] to add the simple motion module QD77MS/LD77MS.

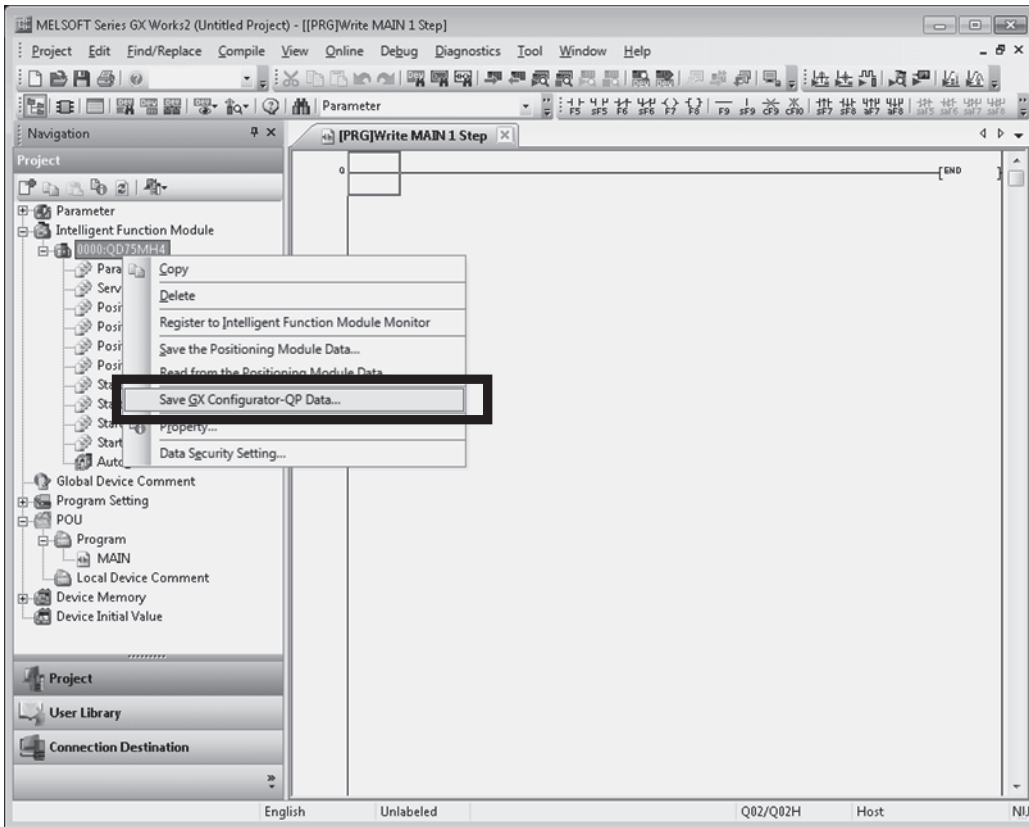

- (3) Double-click [Simple Motion Module Setting] of the added simple motion module to start the simple motion module setting tool.
- (4) Read the GX Configurator-QP data.  
Click [Project] - [Import GX Configurator-QP Data] from the menu. A dialog box for reading the GX Configurator-QP data is displayed. Specify and read the QD75MH data.

When using QD75 data made on GX Works2, save the QD75 data as GX Configurator-QP data on GX Works2 and perform the above operation.

## Part 7: Common Reference Material

- (5) Specify the target module.  
Specify the model and the head XY address of the target module, then click the [OK] button.

## Part 7: Common Reference Material

---

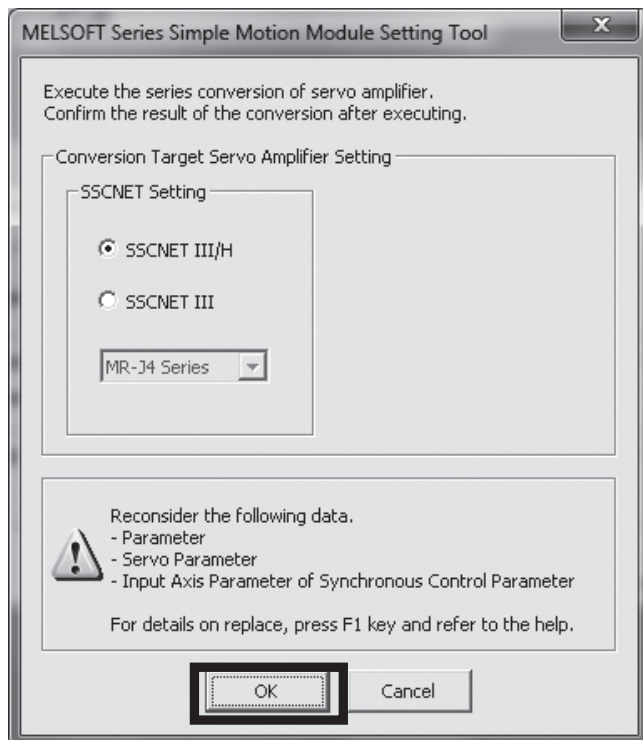

(6) Execute servo parameter conversion.

Select the target servo amplifier setting and click the [OK] button.

The servo parameters are converted as follows depending on the target servo amplifier setting.

When "SSCNET III / H" is selected, MR-J2S-\_B\_ is converted to MR-J4-\_B\_.

When "SSCNET III" is selected, MR-J2S-\_B\_ is converted to MR-J3-\_B\_.

## Part 7: Common Reference Material

---

### 2.4.2 Changing the motion controller A series/Q17nCPU to Q17nDSCPU/Q170MSCPU(-S1)

(1) Start MT Developer2.

(2) Select the source project.

Click [Project] - [Divert File] - [Diversion of Other Format Project] from the menu to display the Diversion of Other Format Project dialog box. Click the [Browse] button to select the source project.

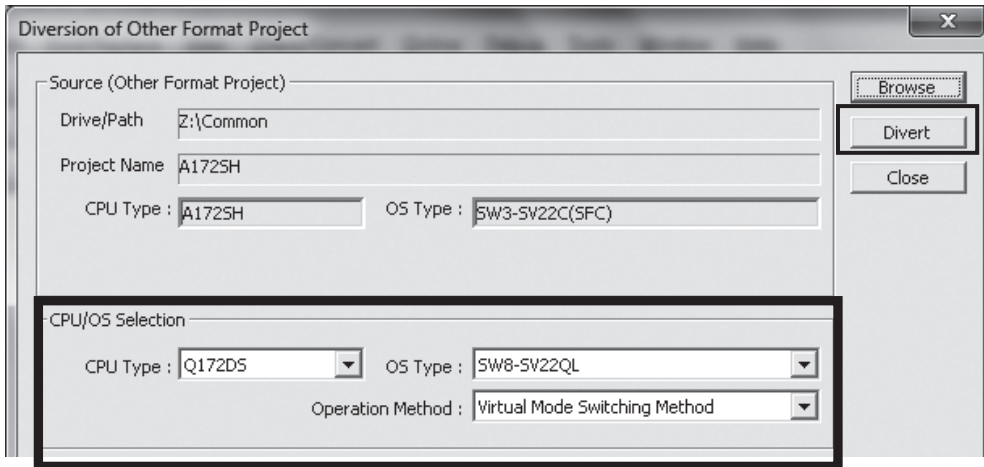

To divert an MT Developer2 project, click [Project] - [Divert File] - [Utilize MT Developer file format Project] from the menu.

## Part 7: Common Reference Material

(3) Execute file diversion.

Select the CPU type, OS type, and Operation method in the CPU/OS selection, and click the [Diversion] button.

(4) Execute servo parameter conversion.

Select the target servo amplifier setting and click the [OK] button.

The servo parameters are converted as follows depending on the target servo amplifier setting.

When "SSCNET III / H" is selected, MR-J2S-\_B\_ is converted to MR-J4-\_B\_.

When "SSCNET III" is selected, MR-J2S-\_B\_ is converted to MR-J3-\_B\_.

## Part 7: Common Reference Material

### 2.4.3 Conversion rules (MR-J2S-\_B\_ => MR-J4-\_B\_)

POINT
<ul style="list-style-type: none"> <li>● The conversion rules in the above table give due consideration to compatibility. However, the servo parameter system of MR-J2S-_B_ and that of MR-J4-_B_ are so different that the rules may not sufficiently apply to cases of special operation (including special specifications). Change the settings as necessary in such cases.</li> <li>● [Pr. PA19 Parameter writing inhibit] after parameter conversion is the initial value. <ul style="list-style-type: none"> <li>• MR-J4-_B_ : [Pr. PA19] = "00ABh"</li> </ul> </li> <li>● When using analog monitor output, perform an operation check because MR-J2S-_B_ and MR-J4-_B_ have different output voltage specifications for droop pulses. <ul style="list-style-type: none"> <li>• MR-J4-_B_ : [Pr. PC09]/[Pr. PC10]</li> </ul> </li> <li>● Output signal assignments will be initialized. Change the settings as necessary. <ul style="list-style-type: none"> <li>• MR-J4-_B_ : [Pr. PD07] to [Pr. PD09]</li> </ul> </li> <li>● Various offset parameters cannot be converted. Change the settings as necessary. <ul style="list-style-type: none"> <li>• MR-J4-_B_ : [Pr. PC11], [Pr. PC12]</li> </ul> </li> <li>● The conversion rules apply only to the common parameters of MR-J2S-_B_ and MR-J4-_B_. Additional parameters of MR-J4-_B_ are set to the initial values of MR-J4-_B_.</li> <li>● The setting value of the error excessive alarm level is 2. Change the settings as necessary. <ul style="list-style-type: none"> <li>• MR-J4-_B_ : [Pr. PC01 Error excessive alarm level]</li> </ul> </li> <li>● The parameter conversion rules are intended for the replacement of "HC-_FS/HA-_FS motors" with "HG motors". When using "HC-_FS/HA-_FS motors" without being replaced, check and change the "electronic gear setting" and "pulse output". (Refer to (2) in Section 2.4.3 and 4. HC-_FS/HA-_FS MOTOR DRIVE.)</li> </ul>

#### (1) Parameters that need to be checked after parameter conversion

Parameter number	Name	Initial value	Setting value	Description
PA04	Function selection A-1	2000h	0__h	Forced stop deceleration function selection To configure the same settings as those for MR-J2S-_B_, select "Forced stop deceleration function disabled (EM1)".
PA09	Auto tuning response	-	-	Auto tuning response setting Adjust the gain value again after the replacement.
PA15	Encoder output pulse	-	-	When the encoder output pulse setting is a dividing ratio setting, this must be adjusted to match the number of pulses per servo motor rotation. As the parameter converter function converts the setting value into 131072 [pulses] for the MR-J2S-_B_ and 4194304 [pulses] for the MR-J4-_B_, restore the setting value to the value for the MR-J2S-_B_ when replacing the servo amplifier.
PA11	Analog monitor 1 offset	-	-	Set the value as required.
PA12	Analog monitor 2 offset	-	-	Set the value as required.
PD07 to PD09	I/O device selection	-	-	This parameter is not converted by the parameter converter function. Set the parameters as required.

Note. For items that have no setting value listed in the table, refer to "Part 3: Review on Replacement of MR-J2S-\_B\_ with MR-J4-\_B\_".

## Part 7: Common Reference Material

---

(2) Parameters that need to be set when the HC/HA series servo motor is used without being replaced

1) When the model of a servo amplifier after replacement is MR-J4- \_B\_

Parameter number	Name	Initial value	Setting value	Description
PA09	Auto tuning response	-	-	Auto tuning response setting Adjust the gain value again after the replacement.
PA10	In-position range	-	-	Use the value of an existing servo amplifier.
PA15	Encoder output pulses	-	-	When the output dividing ratio setting has been selected, use the value of an existing servo amplifier.
PC04	Function selection C-1 Encoder setting selection	-	_ 1 _ _	Set 1: MR-J2S compatible encoder setting.

## Part 7: Common Reference Material

### (3) Conversion rules (MR-J2S-\_B\_ => MR-J4-\_B\_)

The following table shows the servo parameter conversion rules from MR-J2S-\_B\_ (standard) to MR-J4-\_B\_ standard.

Servo parameters not specified in the following table will be set to the initial values.

MR-J2S-_B_				MR-J4-_B_			Conversion rules
No.	Name	Type	Target	No.	Type	Target	
1	Amplifier setting	Hex	___X	PA03	Hex	___X	The setting value will be maintained.
2	Regenerative resistor	Hex	__XX	PA02	Hex	__XX	__00 will be changed to __00. __01 will be changed to __01. __05 will be changed to __04. __08 will be changed to __05. __09 will be changed to __06. __0B will be changed to __08. __0C will be changed to __09. __0E will be changed to __FA. __10 will be changed to __02. __11 will be changed to __03. __82 will not be changed. __83 will not be changed. __84 will not be changed. __85 will not be changed. __87 will be changed to __81. Otherwise, __00 will be set.
7	Rotation direction setting	Dec	-	PA14	Dec	-	The setting value will be maintained.
8	Auto tuning	Hex	___X	PA08	Hex	___X	___2 will be changed to ___3. ___3 will be changed to ___2. ___4 will be changed to ___3. Otherwise, the setting value will be maintained.
9	Servo response setting	Hex	___X	PA09	Dec	-	___1 will be changed to 8. ___2 will be changed to 11. ___3 will be changed to 13. ___4 will be changed to 14. ___5 will be changed to 16. ___6 will be changed to 18. ___7 will be changed to 19. ___8 will be changed to 21. ___9 will be changed to 23. ___A will be changed to 25. ___B will be changed to 27. ___C will be changed to 28. ___D will be changed to 30. ___E will be changed to 32. ___F will be changed to 34. To use the HC/HA series servo motors without being replaced, refer to (2) in Section 2.4.3.
12	Load to motor inertia ratio	Dec	-	PB06	Dec	-	One decimal place will be added.
13	Position loop gain 1	Dec	-	PB07	Dec	-	The setting value will be multiplied by 2/3 and one decimal place will be added.
15	Position loop gain 2	Dec	-	PB08	Dec	-	One decimal place will be added.
16	Speed loop gain 2	Dec	-	PB09	Dec	-	The setting value will be maintained.
17	Speed integral compensation.	Dec	-	PB10	Dec	-	One decimal place will be added.

Hex: hexadecimal parameter; Dec: decimal parameter

### 3. COMMON POINTS TO NOTE

#### 3.1 Points to Note When Replacing a Battery

POINT
<ul style="list-style-type: none"><li>● The MR-BAT and A6BAT battery for MR-J2S and the MR-J2M-BT battery unit for MR-J2M cannot be used due to different battery voltage specifications.</li><li>● The battery replacement procedures for MR-J2S/J2M and for MR-J4 are different. (The HC/HA motor has a super capacitor condenser.) When replacing the battery for MR-J4, observe the following points and procedures.</li></ul>

 <b>WARNING</b>	<ul style="list-style-type: none"><li>● Before replacing a battery, turn off the main circuit power and wait for 15 minutes or longer until the charge lamp turns off. Then, check the voltage between P+ and N- with a voltage tester or others. Otherwise, an electric shock may occur. In addition, when confirming whether the charge lamp is off or not, always confirm it from the front of the servo amplifier.</li></ul>
--------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

 <b>CAUTION</b>	<ul style="list-style-type: none"><li>● The internal circuits of the servo amplifier may be damaged by static electricity. Always take the following precautions.<ul style="list-style-type: none"><li>• Ground human body and work bench.</li><li>• Do not touch the conductive areas, such as connector pins and electrical parts, directly by hand.</li></ul></li></ul>
----------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

POINT
<ul style="list-style-type: none"><li>● Replacing battery with the control circuit power off will erase the absolute position data.</li><li>● Verify that the battery for replacement is within its service life.</li></ul>

POINT
<ul style="list-style-type: none"><li>● Replace the old battery with only the control circuit power supply turned on. Replacing battery with the control circuit power on will not erase the absolute position data.</li></ul>

## Part 7: Common Reference Material

### 3.1.1 Servo amplifier battery mounting method

POINT
-------

- For the servo amplifier with a battery holder on the bottom, it is not possible to wire for the earth with the battery installed. Insert the battery after executing the earth wiring of the servo amplifier.

MR-J4-350\_ or less

MR-J4-500\_ or more

## Part 7: Common Reference Material

### 3.1.2 Disassembly method

#### CAUTION

● Pulling out the connector of the battery without the lock release lever pressed may damage the CN4 connector of the servo amplifier or the connector of the battery.

### 3.1.3 Replacement procedure of MR-BAT6V1SET built-in battery

When the MR-BAT6V1SET reaches the end of its life, replace the MR-BAT6V1 battery in the MR-BAT6V1SET.

1) While pressing the locking part, open the cover.

2) Replace the battery with a new MR-BAT6V1.

3) Press the cover until it is fixed with the projection of the locking part to close the cover.

## Part 7: Common Reference Material

### 4. HC-\_FS /HA-\_FS MOTOR DRIVE

#### 4.1 Parameter setting

##### (1) MR-J4-\_A\_

When driving the HC-\_FS /HA-\_FS series servo motor with MR-J4-\_A\_, configure [Pr. PC22] at "\_ 1 \_ \_" and select the encoder setting compatible with MR-J2S. If there is an error in the setting, [AL.16: Encoder initial communication error 1] or [AL.20: Encoder normal communication error 1] occurs.

No./symbol/name	Setting digit	Function	Initial value [unit]
PC22 **COP1 Function selection C-1	___ x	For manufacturer setting	0h
	__ x _		0h
	_ x _ _	Encoder setting selection 0: MR-J4 compatible encoder setting <b>1: MR-J2S compatible encoder setting</b> If there is an error in the setting, [AL.16: Encoder initial communication error 1] or [AL.20: Encoder normal communication error 1] occurs.	0h
	x _ _ _	Encoder cable communication method selection 0: Two-wire type 1: Four-wire type If there is an error in the setting, [AL.16: Encoder initial communication error 1] or [AL.20: Encoder normal communication error 1] occurs.	0h

##### (2) MR-J4-\_B\_

When driving the HC/HA series servo motor with MR-J4-\_B\_, configure [Pr. PC04] at "\_ 1 \_ \_" and select a compatible encoder setting with MR-J2S. If there is an error in the setting, [AL.16: Encoder initial communication error 1] or [AL.20: Encoder normal communication error 1] occurs.

No./symbol/name	Setting digit	Function	Initial value [unit]
PC04 **COP1 Function selection C-1	___ x	For manufacturer setting	0h
	__ x _		0h
	_ x _ _	Encoder setting selection 0: MR-J4 compatible encoder setting <b>1: MR-J2S compatible encoder setting</b> If there is an error in the setting, [AL.16: Encoder initial communication error 1] or [AL.20: Encoder normal communication error 1] occurs.	0h
	x _ _ _	Encoder cable communication method selection 0: Two-wire type 1: Four-wire type If there is an error in the setting, [AL.16: Encoder initial communication error 1] or [AL.20: Encoder normal communication error 1] occurs.	0h

POINT
<ul style="list-style-type: none"> <li>● When using HC/HA series servo motors without being replaced, check and change the "electronic gear setting" and "pulse output". For MR-J4-_A_, refer to Section 2.3.5 (5). For MR-J4-_B_, refer to Section 2.4.3 (2).</li> <li>● Refer to "Appendix 1. 13 OPTIONS AND PERIPHERAL EQUIPMENT" for "connected cables" when using the HC/HA series servo motors without replacing.</li> <li>● When driving the HC-_FS/HA-_FS series servo motors with the MR-J4-_A_/MR-J4-_B_, use regenerative options that are to be used for the MR-J4 series servo amplifiers. For details regarding combinations of servo amplifiers and regenerative options, refer to "1. COMPARISON TABLE OF REGENERATIVE OPTION COMBINATIONS" of "Part 9: Review on Replacement of Optional Peripheral Equipment".</li> </ul>

Note Only J4 mode is supported. J3 compatibility mode is not supported.

## Part 7: Common Reference Material

### 4.2.1 Method for checking the software version

Start MR Configurator2 (SW1DNC-MRC2-E).

Click [Diagnosis] - [System Configuration] from the menu to display the servo amplifier software version number.

Servo amplifier software version number: BCD-00000000 00

↓                      ↓  
Software version number    software version

## Part 7: Common Reference Material

### 4.3 Overload protection characteristics (Important Points for Combining the drive unit MR-J4-DU55K\_4 and HA-LFS motor)

When using the drive unit MR-J4-DU55K\_4 in combination with the HA-LFS motor, the overload protection characteristics are as shown in the diagram.

For MR-J2S-55K\_4, please check your operation pattern, since the overload protection curve (broken line) of the overload ratio over 200% at the servo-lock is added.

- Note 1. When the servo motor is stopped (servo-lock state) or is operating at a low speed of 30 r/min or less, and an operation generating a torque of 100% or more of the rated torque is carried out at an abnormally high frequency, there is a possibility that the servo amplifier may malfunction even though it is within the electronic thermal protection.
- Note 2. The overload ratio over 100% indicates the rated output of a converter unit. For the rated output, refer to section 1.2.1 of "MR-CV\_/MR-CR55K\_/MR-J4-DU\_(-RJ) Instruction Manual".

# Part 8: Review on Replacement of Motor

## Part 8: Review on Replacement of Motor

### 1. SERVO MOTOR REPLACEMENT

#### 1.1 Servo Motor Substitute Model and Compatibility

**POINT**

● Compatibility here means the mounting compatibility.  
 For details about the compatibility of servo motor dimensions, reducer specifications, moment of inertia, connector specifications, and torque characteristics, refer to "2 COMPARISON OF SERVO MOTOR SPECIFICATIONS".

#### (1) HC-KFS motor

Series	Model	Example of replacement model	Compatibility (O: Compatible)	Note
Small capacity, low inertia HC-KFS series Standard/With brake  (B): With brake	HC-KFS053(B)	HG-KR053(B)	○	<ul style="list-style-type: none"> <li>The torque characteristics of ◆ do not correspond to the range up to the high-speed rotation. For further details, refer to "2.7 Comparison of Servo Motor Torque Characteristics".</li> <li>The capacity of the corresponding servo amplifier will be different if a model marked with ◇ is replaced. The corresponding servo amplifier for HG-KR43 is MR-J4-40_.</li> </ul>
	HC-KFS13(B)	HG-KR13(B)		
	HC-KFS23(B)	HG-KR23(B)		
	HC-KFS43(B)	HG-KR43(B)		
	HC-KFS73(B)	HG-KR73(B)		
	HC-KFS46 ◇	HG-KR43		
	HC-KFS410 ◇	HG-KR43 ◆		
Small capacity, low inertia HC-KFS series with general reducer (G1)  (B): With brake	HC-KFS053(B)G1 1/5	HG-KR053(B)G1 1/5	○	<ul style="list-style-type: none"> <li>Because the reduction gears of models marked with ◆ are different from the actual reduction ratio, it is required that an electronic gear be set up. Refer to "2.4 Comparison of actual reduction ratios for geared servo motors" for the details.</li> </ul>
	HC-KFS053(B)G1 1/12	HG-KR053(B)G1 1/12		
	HC-KFS053(B)G1 1/20	HG-KR053(B)G1 1/20		
	HC-KFS13(B)G1 1/5	HG-KR13(B)G1 1/5		
	HC-KFS13(B)G1 1/12	HG-KR13(B)G1 1/12		
	HC-KFS13(B)G1 1/20	HG-KR13(B)G1 1/20		
	HC-KFS23(B)G1 1/5	HG-KR23(B)G1 1/5		
	HC-KFS23(B)G1 1/12	HG-KR23(B)G1 1/12 ◆		
	HC-KFS23(B)G1 1/20	HG-KR23(B)G1 1/20 ◆		
	HC-KFS43(B)G1 1/5	HG-KR43(B)G1 1/5		
	HC-KFS43(B)G1 1/12	HG-KR43(B)G1 1/12 ◆		
	HC-KFS43(B)G1 1/20	HG-KR43(B)G1 1/20 ◆		
	HC-KFS73(B)G1 1/5	HG-KR73(B)G1 1/5		
HC-KFS73(B)G1 1/12	HG-KR73(B)G1 1/12 ◆			
HC-KFS73(B)G1 1/20	HG-KR73(B)G1 1/20			
Small capacity, low inertia HC-KFS series with high precision reducer (G2)  (B): With brake	HC-KFS053(B)G2 1/5	HG-KR053(B)G7 1/5	(Note 1)	<ul style="list-style-type: none"> <li>The reducer efficiency differs. For further details, refer to "2.4.2 Comparison of actual reduction ratios for geared servo motors".</li> </ul>
	HC-KFS053(B)G2 1/9	HG-KR053(B)G7 1/9		
	HC-KFS053(B)G2 1/20	HG-KR053(B)G7 1/21		
	HC-KFS053(B)G2 1/29	HG-KR053(B)G7 1/33		
	HC-KFS13(B)G2 1/5	HG-KR13(B)G7 1/5		
	HC-KFS13(B)G2 1/9	HG-KR13(B)G7 1/11		
	HC-KFS13(B)G2 1/20	HG-KR13(B)G7 1/21		
	HC-KFS13(B)G2 1/29	HG-KR13(B)G7 1/33		
	HC-KFS23(B)G2 1/5	HG-KR23(B)G7 1/5		
	HC-KFS23(B)G2 1/9	HG-KR23(B)G7 1/11		
	HC-KFS23(B)G2 1/20	HG-KR23(B)G7 1/21		
	HC-KFS23(B)G2 1/29	HG-KR23(B)G7 1/33		
	HC-KFS43(B)G2 1/5	HG-KR43(B)G7 1/5		
	HC-KFS43(B)G2 1/9	HG-KR43(B)G7 1/11		
	HC-KFS43(B)G2 1/20	HG-KR43(B)G7 1/21		
	HC-KFS43(B)G2 1/29	HG-KR43(B)G7 1/33		
	HC-KFS73(B)G2 1/5	HG-KR73(B)G7 1/5		
	HC-KFS73(B)G2 1/9	HG-KR73(B)G7 1/11		
HC-KFS73(B)G2 1/20	HG-KR73(B)G7 1/21			
HC-KFS73(B)G2 1/29	HG-KR73(B)G7 1/33			

Note 1. For mounting dimensions, refer to "2.3 Comparison of Mounting Dimensions for Geared Servo Motors".  
 2. The power supply and encoder connector will be changed. For further details, refer to "2.6 Comparison of Servo Motor Connector Specifications".  
 For replacement using the existing wiring, use a renewal tool.

## Part 8: Review on Replacement of Motor

Series	Model	Example of replacement model	Compatibility (○: Compatible)	Note
Small capacity, low inertia HC-KFS series with high precision reducer Flange output type (G5)  (B): With brake	HC-KFS053(B)G5 1/5	HG-KR053(B)G5 1/5	○	
	HC-KFS053(B)G5 1/11	HG-KR053(B)G5 1/11

## Part 8: Review on Replacement of Motor

### 2.4 Comparison of Geared Servo Motors

POINT
● Geared servo motors are not included in the HG-MR, HG-RR series.

#### 2.4.1 Comparison of actual reduction ratios for geared servo motors

Because the actual reduction ratio for some models is different when replacing HC-KFS or MFS\_G1 with HG-KR\_G1, it is required that an electronic gear be set up.

For general industrial machines: HC-KFS, HC-MFS\_G1 → HG-KR\_G1

Output (W)	Reduction ratio	Actual reduction ratio	
		HC-KFS and HC-MFS series (G1)	HG-KR series (G1)
50	1/5	9/44	9/44
	1/12	49/576	49/576
	1/20	25/484	25/484
100	1/5	9/44	9/44
	1/12	49/576	49/576
	1/20	25/484	25/484
200	1/5	19/96	19/96
	1/12	25/288	961/11664
	1/20	253/5000	513/9984
400	1/5	19/96	19/96
	1/12	25/288	961/11664
	1/20	253/5000	7/135
750	1/5	1/5	1/5
	1/12	525/6048	7/87
	1/20	625/12544	625/12544

Note. Actual reduction ratios with differences are shown with shading.

#### 2.4.2 Comparison of reducer efficiency of geared servo motors

The gear reducer efficiency is different when HC-KFS or HC-MFS\_G2 is replaced with HG-KR\_G7, or HC-SFS or HC-RFS\_G2 is replaced with HG-SR\_G7.

Model	Reducer efficiency (Note)	Substitute model	Reducer efficiency (Note)
HC-KFS_G2	60 to 80%	HG-KR_G7	50 W (reducer model 14A): 12% (reduction ratio 1/5), 22 to 34% (reduction ratio 1/11 to 1/45)
HC-MFS_G2			50 W (reducer model 11B)/100 W/400 W/750 W: 48 to 84%
HC-SFS_G2	80 to 90%	HG-SR_G7	77 to 92%
HC-RFS_G2			

Note. The reducer efficiency differs depending on the reduction ratio. Also, it changes depending on the operating conditions such as the output torque, speed and rotation, temperature, etc. The numerical value in the table is a typical value in the rated torque, rated speed and rotation and typical temperature, and not a guaranteed value.

## Part 8: Review on Replacement of Motor

### 2.5 Comparison of Moment of Inertia

#### (1) HC-KFS motor

Series	Target product			Replacement product		
	Model	Moment of inertia J $\times 10^{-4} \text{ kg}\cdot\text{m}^2$	Load inertia moment ratio	Model	Moment of inertia J $\times 10^{-4} \text{ kg}\cdot\text{m}^2$	Load inertia moment ratio
Small capacity, low inertia HC-KFS series  (B): With brake	HC-KFS053(B)	0.053(0.056)	15 times or less	HG-KR053(B)	0.0450(0.0472)	17 times or less

Note 1. As for the motor specifications not listed here, refer to the catalog or Instruction Manual.

( ): With brake

Note 2. If the load moment inertia ratio with brake is exceeded, please ask the sales contact.

# Part 8: Review on Replacement of Motor

## 2.7 Comparison of Servo Motor Torque Characteristics

### ◆ Comparison of torque characteristics between the HG-KR and HC-KFS series (—: HG-KR, ---: HC-KFS)

#### • HC-KFS series, 200 V class

- Note 1. The above torque characteristics are for 3-phase 200 V AC and 1-phase 230 V AC.  
 2. Please contact your local sales office if the compatibility of torque characteristics is required.

## Part 8: Review on Replacement of Motor

### ◆ Comparison of torque characteristics between the HG-KR and HC-KFS series (—: HG-KR, ---: HC-KFS)

#### • HC-KFS series, 100 V class

Note 1. The above torque characteristics are for 1-phase 100 V AC.

Note 2. Please contact your local sales office if the compatibility of torque characteristics is required.

# Part 8: Review on Replacement of Motor

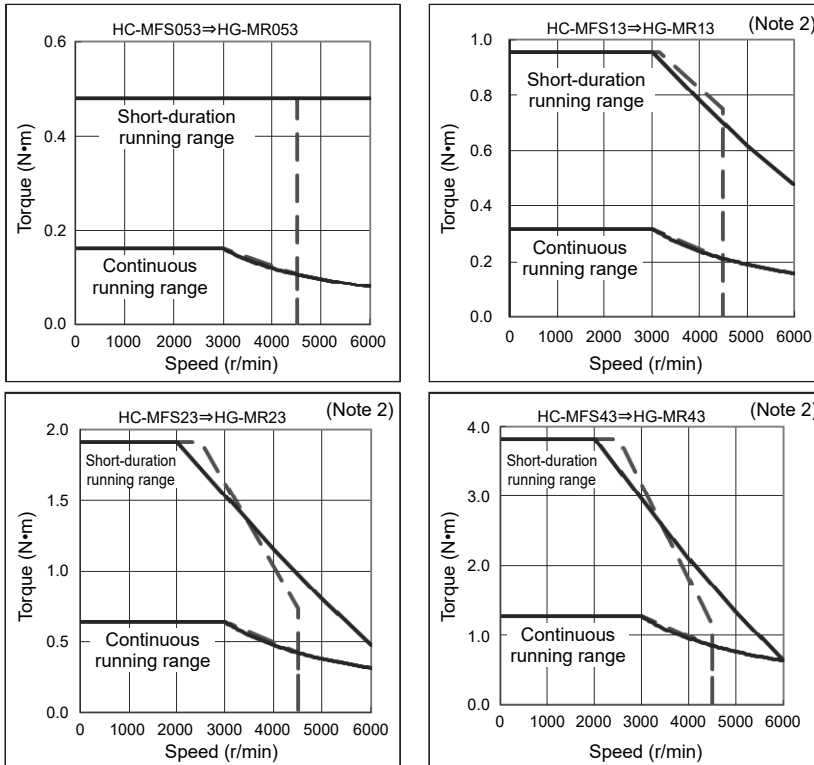

## ◆ Comparison of torque characteristics between the HG-MR and HC-MFS series (—: HG-MR, ---: HC-MFS)

### • HC-MFS series, 200 V class

Note 1. The above torque characteristics are for 3-phase 200 V AC and 1-phase 230 V AC.  
 2. Please contact your local sales office if the compatibility of torque characteristics is required.

### • HC-MFS series, 100 V class

Note 1. The above torque characteristics are for 1-phase 100 V AC.  
 2. Please contact your local sales office if the compatibility of torque characteristics is required.

# Part 8: Review on Replacement of Motor

## ◆ Comparison of torque characteristics between the HG-SR and HC-SFS series (—: HG-SR, ---: HC-SFS)

• HC-SFS 1000 r/min, 2000 r/min series, 200 V class

- Note
1. The above torque characteristics are for 3-phase 200 V AC.
  2. As for 1-phase 230 V AC, refer to the catalog or Instruction Manual.
  3. Please contact your local sales office if the compatibility of torque characteristics is required.

## Part 8: Review on Replacement of Motor

### ◆ Comparison of torque characteristics between the HG-SR and HC-SFS series (—: HG-SR, ---: HC-SFS)

#### • HC-SFS 3000 r/min series, 200 V class

- Note 1. The above torque characteristics are for 3-phase 200 V AC.  
 2. As for 1-phase 230 V AC, refer to the catalog or Instruction Manual.

## Part 8: Review on Replacement of Motor

### ◆ Comparison of torque characteristics between the HG-SR and HC-SFS series (—: HG-SR, ---: HC-SFS)

#### • HC-SFS: 2000 r/min series, 400 V class

- Note
1. The above torque characteristics are for 3-phase 400 V AC.
  2. As for 3-phase 380 V AC, refer to the catalog or Instruction Manual.
  3. Please contact your local sales office if the compatibility of torque characteristics is required.

# Part 8: Review on Replacement of Motor

## ◆ Comparison of torque characteristics between the HG-RR and HC-RFS series (—: HG-SR, ---: HC-RFS)

Note. The above torque characteristics are for 3-phase 200 V AC.

## ◆ Comparison of torque characteristics between the HG-JR and HC-LFS series (—: HG-JR, ---: HC-LFS)

Note 1. The above torque characteristics are for 3-phase 200 V AC.  
 Note 2. As for 1-phase 230 V AC, contact your local sales office.  
 Note 3. Please contact your local sales office if the compatibility of torque characteristics is required.

# Part 8: Review on Replacement of Motor

## ◆ Comparison of torque characteristics between the HG-KR and HC-UFS series (—: HG-KR, ---:HC-UFS)

Note. The above torque characteristics are for 3-phase 200 V AC and 1-phase 230 V AC.

Note 1. The above torque characteristics are for 1-phase 100 V AC.

2. Please contact your local sales office if the compatibility of torque characteristics is required.

## Part 8: Review on Replacement of Motor

### ◆ Comparison of torque characteristics between the HG-UR and HC-UFS series (—: HG-UR, ---:HC-UFS)

- Note 1. The above torque characteristics are for 3-phase 200 V AC.  
 Note 2. Please contact your local sales office if the compatibility of torque characteristics is required.

# Part 8: Review on Replacement of Motor

**POINT**

● When servo motors are replaced with HG-JR\_R\_-S\_ motors (compatible product), the torque characteristics differ.  
Please contact your local sales office.

◆ Comparison of torque characteristics between the HG-JR and HA-LFS series (— : HG-JR, --- : HA-LFS)

• HA-LFS: 1000 r/min series, 200 V class

Note. The above torque characteristics are for 3-phase 200 V AC.

# Part 8: Review on Replacement of Motor

## ◆ Comparison of torque characteristics between the HG-JR and HA-LFS series (—: HG-JR, ---: HA-LFS)

• HA-LFS: 1000 r/min series, 400 V class

- Note 1. The above torque characteristics are for 3-phase 400 V AC.  
 Note 2. As for 3-phase 380 V AC, refer to the catalog or Instruction Manual.  
 Note 3. Please contact your local sales office if the compatibility of torque characteristics is required.

## Part 8: Review on Replacement of Motor

### ◆ Comparison of torque characteristics between the HG-JR and HA-LFS series (—: HG-JR, ---: HA-LFS)

• HA-LFS: 1500 r/min series, 200 V class

Note 1. The above torque characteristics are for 3-phase 200 V AC.

2. Please contact your local sales office if the compatibility of torque characteristics is required.

## Part 8: Review on Replacement of Motor

### ◆ Comparison of torque characteristics between the HG-JR and HA-LFS series (—: HG-JR, ---: HA-LFS)

• HA-LFS: 1500 r/min series, 400 V class

- Note 1. The above torque characteristics are for 3-phase 400 V AC.  
 Note 2. As for 3-phase 380 V AC, refer to the catalog or Instruction Manual.  
 Note 3. Please contact your local sales office if the compatibility of torque characteristics is required.

# Part 8: Review on Replacement of Motor

◆ Comparison of torque characteristics between the HG-JR, SR and HA-LFS series (—: HG-JR/SR, ---: HA-LFS)

• HA-LFS: 2000 r/min series, 200 V class

- Note 1. The above torque characteristics are for 3-phase 200 V AC.  
 Note 2. Please contact your local sales office if the compatibility of torque characteristics is required.

# Part 8: Review on Replacement of Motor

## ◆ Comparison of torque characteristics between the HG-JR and HA-LFS series (—: HG-JR, ---: HA-LFS)

• HA-LFS: 2000 r/min series, 400 V class

- Note
1. The above torque characteristics are for 3-phase 400 V AC.
  2. As for 3-phase 380 V AC, refer to the catalog or Instruction Manual.
  3. Please contact your local sales office if the compatibility of torque characteristics is required.

**of Optional Peripheral**  
**Equipment**

## Part 9: Review on Replacement of Optional Peripheral Equipment

### Part 9: Review on Replacement of Optional Peripheral Equipment

#### 1. COMPARISON TABLE OF REGENERATIVE OPTION COMBINATIONS

POINT
<ul style="list-style-type: none"> <li>● The MR-J4 series provides the new regenerative options shown in the table below.</li> <li>● When an MR-J2S series regenerative resistor is used as it is with a servo motor combined, an alarm may occur. Be sure to use the regenerative resistor in the combination specified for the MR-J4 series.</li> <li>● Do not use regenerative options newly provided by the MR-J4 series with the MR-J2S series because use of them causes an amplifier malfunction.</li> </ul>

List of new regenerative options

Model	Regenerative option MR-RB		Accessory regenerative resistor
MR-J4-350_(-RJ)	3N	5N	
MR-J4-500_(-RJ)	31	51	
MR-J4-11K_(-RJ)	5R		GRZG400-0.8Ω × 4
MR-J4-15K_(-RJ)	9F		GRZG400-0.6Ω × 5
MR-J4-22K_(-RJ)	9T		GRZG400-0.5Ω × 5
MR-J4-60_4(-RJ)	1H-4	3M-4	
MR-J4-100_4(-RJ)	1H-4		
MR-J4-200_4(-RJ)	3G-4	5G-4	
MR-J4-500_4(-RJ)	34-4	54-4	
MR-J4-700_4(-RJ)	3U-4	5U-4	
MR-J4-11K_4(-RJ)	5K-4		GRZG400-2.5Ω × 4
MR-J4-15K_4(-RJ)	6K-4		GRZG400-2Ω × 5

# Part 9: Review on Replacement of Optional Peripheral Equipment

## 1.1 Regenerative Options (200 V/100 V)

### 1.1.1 Combination and regenerative power for the MR-J2S series

List of regenerative options

Servo amplifier model	Built-in regenerative resistor [W]	Permissible regenerative power of regenerative option [W] MR-RB								
		032 [40 Ω]	12 [40 Ω]	30 [13 Ω]	3N [9 Ω]	31 [6.7 Ω]	32 [40 Ω]	(Note 1) 50 [13 Ω]	(Note 1) 5N [9 Ω]	(Note 1) 51 [6.7 Ω]

# Part 9: Review on Replacement of Optional Peripheral Equipment

## 4. POWER SUPPLY WIRE SIZE

POINT
<p>● When using the existing cables, refer to "[Appendix 2] Introduction to Renewal Tool".</p>

### 4.1 Selection of Power Supply Wire Size (Example)

#### 4.1.1 MR-J2S-series power supply wire size

The following diagram shows the wires used for wiring. Use the wires given in this section or equivalent.

## Part 9: Review on Replacement of Optional Peripheral Equipment

In this case, the power supply wire used is a 600 V plastic one and the wiring distance is 30 m or less. When the wiring distance exceeds 30 m, select another wire size in consideration of the voltage drop. The alphabet letters (a, b, c) on the table correspond to crimp terminals used when wiring a servo amplifier. The method of wiring a servo motor differs depending on the type and capacity of the servo motor. To comply with the UL/cUL (CSA) standard, use UL-approved copper wires rated at 60°C or higher for wiring.

Wire size selection example 1 (IV wire)  
Recommended wire

Servo amplifier	Power supply wire [mm <sup>2</sup> ] (Note 1)					
	1) L1/L2/L3/⊕	2) L11/L21	3) U/V/W/P1/P/⊕	4) P/C	5) B1/B2	6) BU/BV/BW

2. P1 is not available for a servo amplifier of 7 kW or less.

## Part 9: Review on Replacement of Optional Peripheral Equipment

### 4.1.2 MR-J4-series power supply wire size

POINT
● To comply with the IEC/EN/UL/CSA standard, use the wires shown in the instruction manuals of the servo amplifier in use for wiring. To comply with other standards, use a wire that is complied with each standard.
● Selection conditions of wire size are as follows. Construction condition: Single wire set in midair Wire length: 30 m or less

The following diagram shows the wires used for wiring. Use the wires given in this section or equivalent.

## Part 9: Review on Replacement of Optional Peripheral Equipment

Example of selecting the wire sizes

For the power supply wire, use a 600 V grade heat-resistant polyvinyl chloride insulated wire (HIV wire). The table below shows selection examples of power supply wire sizes.

Wire size selection example (HIV wire)  
Recommended wire

Servo amplifier	Power supply wire [mm <sup>2</sup> ] (Note 1)

d	FVD14-6	YF-1 E-4	YNE-38	DH-112 DH-122	
e	FVD22-6	YF-1 E-4	YNE-38	DH-113 DH-123	

## Part 9: Review on Replacement of Optional Peripheral Equipment

### 4.2.2 MR-J4-series crimp terminal

#### (1) Selection example of crimp terminals (200 V/100 V class)

The table below shows selection examples of a crimp terminal for a servo amplifier terminal block.

Recommended crimp terminals

Symbol	Servo amplifier-side crimp terminals				Manufacturer
	(Note 2) Crimp terminal	Applicable tool			
		Body	Head	Dice	
a	FVD5.5-4	YNT-1210S			JST
b (Note 1)	8-4NS	YHT-8S			
c	FVD2-4	YNT-1614			
d	FVD2-M3				
e	FVD1.25-M3	YNT-2216			
f	FVD14-6	YF-1	YNE-38	DH-122 DH-112	
g	FVD5.5-6	YNT-1210S			
h	FVD22-6	YF-1	YNE-38	DH-123 DH-113	
i	FVD38-8	YF-1	YNE-38	DH-124 DH-114	
j	FVD5.5-8	YNT-1210S			
k	FVD8-6	YF-1 E-4	YNE-38	DH-121 DH-111	

Note 1. Cover the crimped portion with an insulating tape.

2. Installation of a crimp terminal may be impossible depending on the size, so make sure to use the recommended crimp terminal or one equivalent to it.

#### (2) Selection example of crimp terminals (400 V class)

The table below shows selection examples of a crimp terminal for a servo amplifier terminal block.

Recommended crimp terminals

Symbol	Servo amplifier-side crimp terminals				Manufacturer	
	Crimp terminal (Note)	Applicable tool				
		Body	Head	Dice		
a	FVD5.5-4	YNT-1210S			JST	
b	FVD2-4	YNT-1614				
c	FVD2-M3					
d	FVD5.5-6	YNT-1210S				
e	FVD5.5-8	YNT-1210S				
f	FVD2-6	YNT-1614				
g	FVD8-6	YF-1	YNE-38	DH-121 DH-111		
h	FVD8-8					
i	FVD14-8					DH-122 DH-112

Note. Installation of a crimp terminal may be impossible depending on the size, so make sure to use the recommended crimp terminal or one equivalent to it.

## Part 9: Review on Replacement of Optional Peripheral Equipment

### 4.3 Selection of Molded-Case Circuit Breaker, Fuse, and Magnetic Contactor (Example)

#### 4.3.1 MR-J2S series, molded-case circuit breakers, fuses, and magnetic contactors

**CAUTION**

- Select a molded-case circuit breaker with a short shut-off time to prevent smoking and fire from the servo amplifier.
- Always use one molded-case circuit breaker and one magnetic contactor with one servo amplifier.

When using a fuse instead of the molded-case circuit breaker, use the one having the specifications given in this section.

Molded-case circuit breakers, fuses, and magnetic contactors

Servo amplifier	Molded-case Circuit breakers (Note)	Fuses			Magnetic contactor	
		Class	Current [A]	Voltage [V]		
MR-J2S-10_(1)	30 A frame 5 A	K5	10	AC 250	S-N10	
MR-J2S-20_			15

- Note 1. In order for the servo amplifier to comply with the UL/CSA standard, refer to the applicable "Servo Amplifier Instruction Manual".
2. Use a magnetic contactor with an operation delay time (interval between current being applied to the coil until closure of contacts) of 80 ms or less.
3. Use a molded-case circuit breaker with operating characteristics equivalent or higher than our multi-purpose product.

## Part 9: Review on Replacement of Optional Peripheral Equipment

(2) For control circuit power supply

When the wiring for the control circuit power supply (L11, L21) is thinner than that for the main circuit power supply (L1, L2, L3), install an overcurrent protection device (molded-case circuit breaker or fuse) to protect the branch circuit.

Molded-case circuit breaker, fuse

Servo amplifier	Molded-case circuit breaker (Note)		Fuse (Class T)		Fuse (Class K5)	
	Frame, rated current	Voltage AC [V]	Current [A]	Voltage AC [V]	Current [A]	Voltage AC [V]

Note. In order for the servo amplifier to comply with the UL/CSA standard, refer to the Servo Amplifier Instruction Manual.

# Part 9: Review on Replacement of Optional Peripheral Equipment

## 5. BATTERY

POINT
● MR-BAT and A6BAT batteries for MR-J2S, or the MR-J2M-BT battery unit for MR-J2M, cannot be used because their battery voltage specifications are different from those of the MR-J4 series.

### 5.1 MR-J2S-Series Battery

#### 5.1.1 Battery replacement procedure

Model: MR-BAT or A6BAT

 <b>WARNING</b>	● Before mounting a battery, turn off the power and wait 15 min or longer until the charge lamp turns off, then check the voltage between P and N with a voltage tester, etc., otherwise an electric shock may occur. In addition, when confirming whether the charge lamp is off or not, always check from the front of the servo amplifier.
--------------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

POINT
● The internal circuits of the servo amplifier may be damaged by static electricity. Always take the following precautions. <ul style="list-style-type: none"><li>• Ground human body and work bench.</li><li>• Do not touch the conductive areas, such as connector pins and electrical parts, directly by hand.</li></ul>

### 5.2 MR-J2M-Series Battery Unit

Type: MR-J2M-BT

## Part 9: Review on Replacement of Optional Peripheral Equipment

### 5.3 MR-J4-Series Battery

#### 5.3.1 Battery replacement procedure

Model: MR-BAT6V1SET, MR-BAT6V1BJ, MR-BT6VCASE

#### WARNING

- Before replacing a battery, turn off the main circuit power and wait for 15 minutes or longer (when 30 kW or more is used, 20 minutes or more) until the charge lamp turns off. Then, check the voltage between P+ and N- with a voltage tester or others. Otherwise, an electric shock may occur. In addition, when confirming whether the charge lamp is off or not, always confirm it from the front of the servo amplifier.

#### CAUTION

- The internal circuits of the servo amplifier may be damaged by static electricity. Always take the following precautions.
  - Ground your body and the work bench.
  - Do not touch the conductive areas, such as connector pins and electrical parts, directly by hand.
- The built-in battery for the MR-BAT6V1BJ battery for junction battery cable cannot be replaced. Therefore, do not disassemble the MR-BAT6V1BJ battery for junction battery cable. Doing so may cause a malfunction.

#### POINT

- When using the BAT6V1SET battery and the MR-BT6VCASE battery case are used  
Replacing a battery with the control circuit power supply turned off will erase the absolute position data.  
When using the MR-BAT6V1BJ battery for junction battery cable  
In order to prevent the absolute position data from being erased, replace the MR-BAT6V1BJ battery for junction battery cable according to the procedure described in the Instruction Manual.
- Verify that the battery for replacement is within its service life.

Replace the old battery with only the control circuit power supply turned on. Replacing a battery with the control circuit power supply turned on will cause [AL.9F.1 low battery] but will not erase the absolute position data.

Refer to the Instruction Manual for the procedure for mounting the battery on the servo amplifier.

#### POINT

- Refer to the Instruction Manual for battery transportation and the new EU Directive on batteries.

## Part 9: Review on Replacement of Optional Peripheral Equipment

POINT
<ul style="list-style-type: none"> <li>● Three types of batteries are used to construct the absolute position detection system: MR-BAT6V1SET battery, MR-BAT6V1BJ battery for junction battery cable, and MR-BT6VCASE battery case. The use of the MR-BAT6V1BJ battery for junction battery cable has the following characteristics distinctive from other batteries.               <ul style="list-style-type: none"> <li>• The encoder cable can be removed from the servo amplifier.</li> <li>• A battery can be replaced with the control circuit power supply turned off.</li> </ul> </li> <li>● If the encoder lost the absolute position data, always perform home position setting before operation. The encoder will lose the absolute position data in the following cases. In addition, the absolute position data may be erased if the battery is used outside of the specification.               <p>When using the MR-BAT6V1SET battery and the MR-BT6VCASE battery case</p> <ul style="list-style-type: none"> <li>• Encoder cable is removed.</li> <li>• A battery is replaced with the control circuit power supply turned off.</li> </ul> <p>When using the MR-BAT6V1BJ battery for junction battery cable</p> <ul style="list-style-type: none"> <li>• The connector and the cable are removed between the servo motor and the battery.</li> <li>• A battery is replaced in a procedure different from the procedure described in the Instruction Manual.</li> </ul> </li> <li>● A single MR-BT6VCASE battery case can retain the absolute position data of up to eight axes of servo motors.</li> </ul>

### 5.3.2 When using the MR-BAT6V1SET battery

#### (a) Battery connection

Connect according to the following figure.

#### (b) Battery manufacture year and month

The manufacture date of an MR-BAT6V1 battery installed in MR-BAT6V1SET is written on the name plate attached to the MR-BAT6V1 battery.

## Part 9: Review on Replacement of Optional Peripheral Equipment

### 5.3.3 When using MR-BAT6V1BJ battery for junction battery cable

#### (a) Battery connection

Connect according to the following figure in combination with the MR-BT6VCBL03M junction battery cable.

#### (b) Battery manufacture year and month

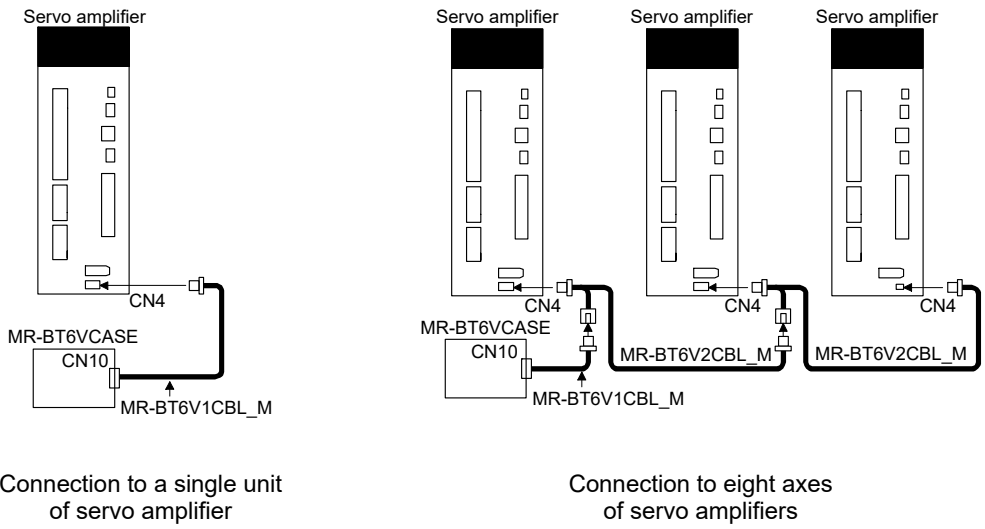

The manufacture year and month are described in the manufacturer's (SERIAL) number marked on the rating name plate. The second digit of the manufacturer's number indicates the first digit of the Christian Era and the third digit indicates the manufacture month (X for October, Y for November, and Z for December). For example, November 2013 is indicated as "SERIAL: \_3Y\_ \_ \_ \_ \_".

# Part 9: Review on Replacement of Optional Peripheral Equipment

## 5.3.4 When using MR-BT6VCASE battery case

### (a) Battery connection

A single MR-BT6VCASE battery case can retain the absolute position data of up to eight axes of servo motors. The maximum number of axes includes the number of axes of servo motors. Refer to the following table for the connectible number of axes of servo motors.

Servo motor	Number of axes									
Rotary servo motor	0	1	2	3	4	5	6	7	8	

The battery case accommodates five connected batteries. The battery case contains no batteries. Batteries need to be prepared separately.

### (b) Battery manufacture year and month

The manufacture year and month of an MR-BAT6V1 to be housed in the MR-BT6VCASE battery case is written on the name plate attached to the MR-BAT6V1 battery.

# Part 9: Review on Replacement of Optional Peripheral Equipment

## 6. EMC FILTER

POINT
<ul style="list-style-type: none"> <li>Recommended EMC filters for the MR-J2S series are different from those for the MR-J4 series.</li> </ul>

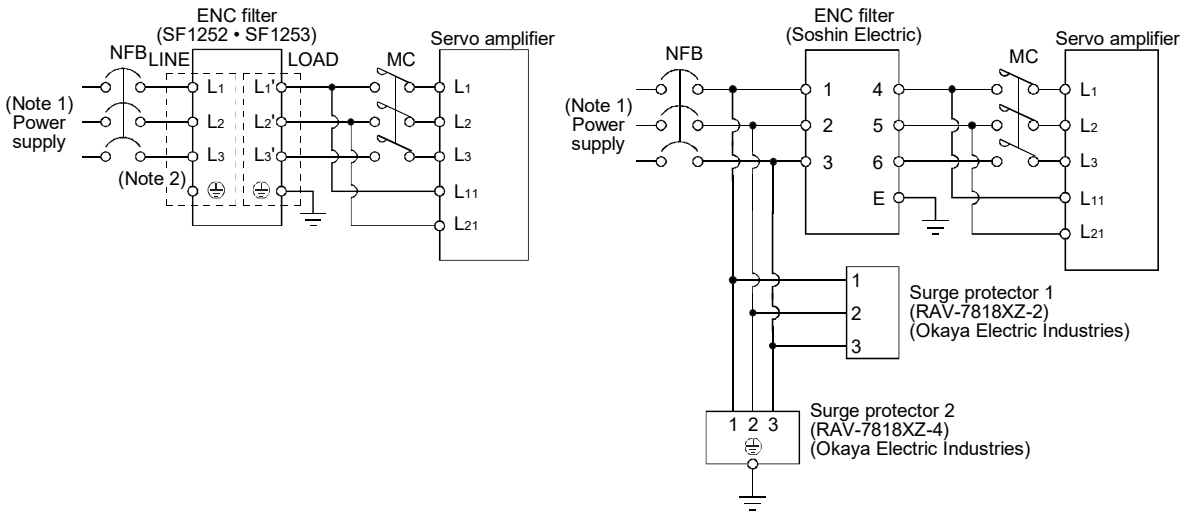

### 6.1 MR-J2S-Series EMC Filter (200 V/100 V class)

It is recommended that one of the following filters be used to comply with the EN EMC Directive. Some EMC filters have large in leakage current.

Combination with the servo amplifier

Servo amplifier	Recommended filter		Mass [kg]
	Model	Leakage current [mA]	
MR-J2S-10_ to MR-J2S-100_ MR-J2S-10_1 to MR-J2S-40_1	SF1252	38	0.75
MR-J2S-200_/MR-J2S-350_	SF1253	57	1.37
MR-J2S-500_	(Note) HF3040A-TM	1.5	5.5
MR-J2S-700_	(Note) HF3050A-TM	1.5	6.7
MR-J2S-11K_	(Note) HF3060A-TMA	3.0	10.0
MR-J2S-15K_	(Note) HF3080A-TMA	3.0	13.0
MR-J2S-22K_	(Note) HF3100A-TMA	3.0	14.5
MR-J2S-30K_/MR-J2S-37K_	(Note) HF3200A-TMA	3.0	23.5

Note. Soshin Electric. A surge protector is separately required to use any of these EMC filters.  
(Refer to EMC Installation Guidelines.)

Note1. With 1-phase 230 V AC, connect the power supply to L1 and L2, and leave L3 open.  
L3 is not provided for 1-phase 100 V AC to 120 V AC.  
2. When the power supply has an earth wire, connect it to this terminal.

### 6.1.1 Dimensions

# Part 9: Review on Replacement of Optional Peripheral Equipment

HF3040A-TM/HF3050A-TM/HF3060A-TMA

## Part 9: Review on Replacement of Optional Peripheral Equipment

### 6.2 MR-J2S-Series EMC Filter (400 V class)

It is recommended that one of the following filters be used to comply with the EN EMC Directive. Some EMC filters have large in leakage current.

Combination with the servo amplifier

Servo amplifier	Recommended filter		Mass [kg]
	Model (Note 1)	Leakage current [mA] (Note 2)	
MR-J2S-60_4 to MR-J2S-200_4	TF3005C-TX	5.5	6
MR-J2S-350_4 to MR-J2S-700_4	TF3020C-TX		
MR-J2S-11K_4	TF3030C-TX		
MR-J2S-15K_4	TF3040C-TX		
MR-J2S-22K_4	TF3060C-TX		
MR-J2S-30K_4~ MR-J2S-55K_4	TF3150C-TX	5.5	31

Note 1. Soshin Electric

2. When one phase opens with the 3-phase neutral-point (N) grounded power supply, the value will be 350 mA.

#### 6.2.1 Dimensions

## Part 9: Review on Replacement of Optional Peripheral Equipment

### 6.3 MR-J4-Series EMC Filter (Recommended) (200 V class)

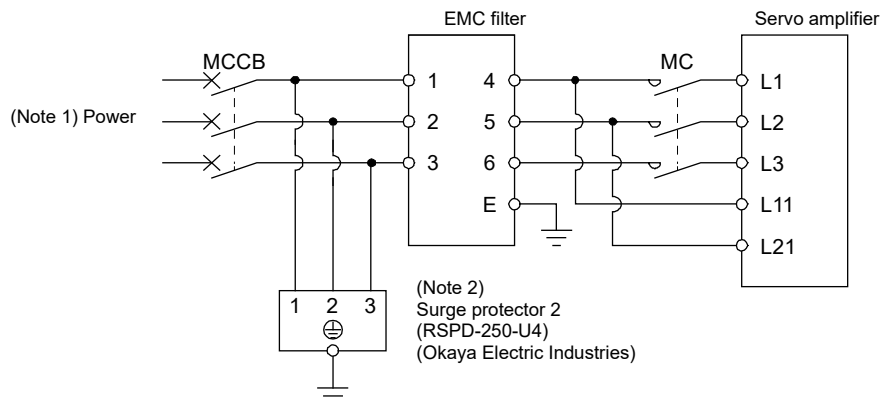

It is recommended that one of the following filters be used to comply with EN EMC directive. Some EMC filters have large in leakage current.

Table. Combination with the servo amplifier

Servo amplifier	Recommended filter (Soshin Electric)				Mass [kg]
	Model	Rated current [A]	Rated voltage [V AC]	Leakage current [mA]	
MR-J4-10_(-RJ) to MR-J4-100_(-RJ)	HF3010A-UN (Note)	10	250	5	3.5
MR-J4-200_(-RJ)/MR-J4-350_(-RJ)	HF3030A-UN (Note)	30			5.5
MR-J4-500_(-RJ)/MR-J4-700_(-RJ)	HF3040A-UN (Note)	40		6.5	6
MR-J4-11K_(-RJ)/MR-J4-15K_(-RJ)/ MR-J4-22K_(-RJ)	HF3100A-UN (Note)	100			12
MR-J4-DU30K_/MR-J4-DU37K_	HF3200A-UN (Note)	200	250	9	18
MR-J4-10_1(-RJ) to MR-J4-40_1(-RJ)	HF3010A-UN (Note)	10	250	5	3.5

Note. A surge protector is separately required to use any of these EMC filters.

#### 6.3.1 Connection example

- Note 1. For 1-phase 200 V AC to 240 V AC, connect the power supply to L1 and L3. Leave L2 open.  
L2 is not provided for 1-phase 100 V AC to 120 V AC.
- Note 2. The example is when a surge protector is connected.

# Part 9: Review on Replacement of Optional Peripheral Equipment

## 7.5 MR-J4-Series Power Factor Improving DC Reactor (200 V class)

The following shows the advantages of using power factor improving DC reactor.

- It improves the power factor by increasing the form factor of the servo amplifier's input current.
- It decreases the power supply capacity.
- The input power factor is improved to about 85%.
- As compared to the power factor improving AC reactor (FR-HAL), it decreases the loss.

When using the power factor improving DC reactor to the servo amplifier, remove the short bar across P3 and P4. If it remains connected, the effect of the power factor improving DC reactor is not produced.

When used, the power factor improving DC reactor generates heat. To release heat, therefore, leave a 10 cm or more clearance at each of the top and bottom, and a 5 cm or more clearance on each side.

Fig. 9.1

Fig. 9.2

Fig. 9.3

Note 1. Use this for grounding.

Note 2. When using the power factor improving DC reactor, remove the short bar across P3 and P4.

# Part 9: Review on Replacement of Optional Peripheral Equipment

## 7.6 MR-J4-Series Power Factor Improving AC Reactor (200 V/100 V class)

The following shows the advantages of using power factor improving AC reactor.

- It improves the power factor by increasing the form factor of the servo amplifier's input current.
- It decreases the power supply capacity.
- The input power factor is improved to about 80%.

When using power factor improving reactors for two servo amplifiers or more, make sure to connect a power factor improving reactor to each servo amplifier. If using only one power factor improving reactor, enough improvement effect of phase factor cannot be obtained unless all servo amplifiers are operated.

- Note 1. Use this for grounding.  
 2.  $W \pm 2$  is applicable for FR-HAL-0.4K to FR-HAL-1.5K.

Note. For 1-phase 200 V AC to 240 V AC, connect the power supply to L1 and L3. Leave L2 open.

Note. Use this for grounding.

Note. Use this for grounding.

# Part 9: Review on Replacement of Optional Peripheral Equipment

## 7.8 MR-J4-Series Power Factor Improving AC Reactor (400 V class)

The following shows the advantages of using power factor improving AC reactor.

- It improves the power factor by increasing the form factor of the servo amplifier's input current.
- It decreases the power supply capacity.
- The input power factor is improved to about 80%.

When using power factor improving reactors for two servo amplifiers or more, make sure to connect a power factor improving reactor to each servo amplifier. If using only one power factor improving reactor, enough improvement effect of phase factor cannot be obtained unless all servo amplifiers are operated.

Fig. 9.10

Fig. 9.11

Fig. 9.12

Note. Use this for grounding.

## Part 9: Review on Replacement of Optional Peripheral Equipment

## 8. SETUP SOFTWARE

### 8.1 MR-J2S Series Setup Software

Setup software (MRZJW3-SETUP161E) uses the communication function of the servo amplifier to change parameter setting values, display graphs, and perform test operations, etc., on the personal computer.

#### 8.1.1 Specifications

Item	Description
Communication signal	RS-232C
Baud rate [bps]	57600/38400/19200/9600
Monitor	Display all, high-speed display, graph display (Minimum resolution changes with the processing speed of the personal computer.)
Alarm	Display, history, amplifier data
Diagnosis	DI/DO display, display of the reason for no rotation, power ON cumulative display, software No. display, motor information display, tuning data display, ABS data display, VC automatic offset display, axis name setting
Parameter	Parameter list, turning, change list, detailed information
Test operation	JOG operation, positioning operation, motor-less operation, DO forced output, and program operation
Advanced function	Machine analyzer gain search, machine simulation
File operation	Data read, save, print
Others	Automatic operation, station number setting, help display

### 8.2 MR-J4-Series MR Configurator2

<b>POINT</b>
●MR-J4-_A_-RJ servo amplifiers are supported with software version 1.19V or later.

MR Configurator2 (SW1DNC-MRC2-E) uses the communication function of the servo amplifier to perform parameter setting changes, graph display, test operation, etc. on a personal computer.

#### 8.2.1 Specifications

Item	Description
Project	Create/read/save/delete project, system setting, and print
Parameter	Parameter setting, amplifier axis name setting, parameter converter (Note 1)
Positioning data (Note 2)	Point table, program, indirect addressing
Monitor	Display all, I/O monitor, graph, and ABS data display
Diagnostics	Alarm display, alarm onset data display, drive recorder, display of the reason for no rotation, system configuration, life diagnosis, machine diagnosis
Test operation	JOG operation, positioning operation, motor-less operation, DO forced output, and program operation, Test operation event information, single-step feed (Note 2)
Adjustment	One-touch tuning, tuning, and machine analyzer
Others	Servo assistant, parameter setting range update, help display, connection to MITSUBISHI ELECTRIC FA Global Website

Note 1. This function is available only in standard control mode.

2. This function is available only for MR-J4-\_A\_-RJ.

# Part 9: Review on Replacement of Optional Peripheral Equipment

## 8.3 System Requirements

### 8.3.1 Components

To use this software, the following components are required in addition to the servo amplifier and servo motor.

Equipment	(Note 1) Description
Personal computer (Note 2, 3, 4, 5, 7)	OS Microsoft® Windows® 10 Home Operating System Microsoft® Windows® 10 Pro Operating System Microsoft® Windows® 10 Enterprise Operating System Microsoft® Windows® 10 Education Operating System Microsoft® Windows® 8.1 Operating System Microsoft® Windows® 8.1 Pro, Operating System Microsoft® Windows® 8.1 Enterprise Operating System Microsoft® Windows® 8 Operating System Microsoft® Windows® 8 Pro Operating System Microsoft® Windows® 8 Enterprise Operating System Microsoft® Windows® 7 Starter Operating System Microsoft® Windows® 7 Home Premium Operating System Microsoft® Windows® 7 Professional Operating System Microsoft® Windows® 7 Ultimate Operating System Microsoft® Windows® 7 Enterprise Operating System
	CPU Desktop personal computer: Intel® Celeron® processor, 2.8 GHz or more recommended Notebook personal computer: Intel® Pentium® M processor, 1.7 GHz or more recommended
	Memory 1GB or more recommended (For 32-bit edition) 2GB or more recommended (For 64-bit edition)
	Hard Disk 1.5 GB or more of free space
	Communication interface USB port (Note 6).
Browser	Windows® Internet Explorer® 4.0 or later (Note 1)
Display	One whose resolution is 1024 × 768 or more and that can provide a high color (16 bit) display. Connectable with the above personal computer.
Keyboard	Connectable with the above personal computer.
Mouse	Connectable with the above personal computers.
Printer	Connectable with the above personal computer.
USB cable	MR-J3USBCBL3M

Note 1. Microsoft, Windows and Internet Explorer are registered trademarks or trademarks of Microsoft Corporation in the United States and other countries.

Celeron, Pentium is the registered trademarks of Intel Corporation.

2. When Windows® 7 or later is used, NET Framework 3.5 (including .NET2.0 and 3.0) must be enabled.
3. When the following functions are used, this product may not operate correctly.
  - Windows® Program Compatibility mode
  - Remote Desktop
  - Windows touch or touch
  - Client Hyper-V
  - Virtual desktop
  - Fast User Switching
  - Windows XP Mode
  - Modern UI
  - Tablet mode
4. In the following cases, the display of this product may not operate correctly.
  - The size of the text or other items on the screen is set to other than the prescribed value (96DPI, 100%. 9pt, etc.).
  - Resolution of the screen is changed during operation.
  - The screen is set as multi display.
5. When using this software with Windows® 7 or later, log in as "Standard user" or "Administrator".
6. 64-bit Windows is not supported.

## Part 9: Review on Replacement of Optional Peripheral Equipment

### 8.3.2 Connection with servo amplifier

### 8.3.3 Points to note for use of the USB communication function

To prevent an electric shock or malfunction of the servo amplifier, follow the instructions below.

#### (1) Connection of the power supply of a personal computer

Connect the power supply of a personal computer following the procedure below.

##### (a) When using a personal computer with AC power

- 1) When using a personal computer whose power plug has three pins or a grounding wire, use a grounded outlet or ground the grounding wire.
- 2) When using a personal computer whose power plug has two pins and no grounding wire, connect the personal computer to the servo amplifier following the procedure below.
  - a) Remove the power plug of the personal computer from the AC outlet.
  - b) Verify that the power plug has been removed from the AC outlet, and then connect the servo amplifier to other devices.
  - c) Insert the power plug of the personal computer into the AC outlet.

##### (b) When using a battery-driven personal computer, use the computer as is.

#### (2) Connection to other devices by use of the servo amplifier communication function

When the servo amplifier becomes charged due to connection to the personal computer and the charged servo amplifier is connected to other devices, the servo amplifier or the connected devices may be damaged. Connect the servo amplifier to other devices following the procedure below.

##### (a) Turn off the power of the devices connected to the servo amplifier.

##### (b) Turn off the power of the servo amplifier connected to the personal computer, and then verify that the charge lamp is not lit.

##### (c) Connect the servo amplifier to the devices.

##### (d) Turn on the servo amplifier and the devices connected to it.

# **Part 10**

# **Startup Procedure Manual**

## Part 10: Startup Procedure Manual

### 1. STARTUP

	<b>WARNING</b> ● Do not operate the switches with wet hands. Otherwise, it may cause an electric shock.
-----------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------

	<b>CAUTION</b> <ul style="list-style-type: none"> <li>● Before starting operation, check the parameters. Improper settings may cause some machines to operate unexpectedly.</li> <li>● The servo amplifier heat sink, regenerative resistor, servo motor, etc., may be hot while power is on or for some time after power-off. Take safety measures, example, provide covers to avoid accidentally touching the parts (cables, etc.) by hand. Otherwise, it may cause a burn injury and parts damaged.</li> <li>● During operation, never touch the rotor of the servo motor. Otherwise, it may cause injury.</li> </ul>
-----------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

#### 1.1 Switching power on for the first time

When switching power on for the first time, follow this section to make a startup.

##### 1.1.1 Startup procedure

Note 1. For details about the settings for each servo amplifier and its test operation, refer to the applicable Servo Amplifier Instruction Manual.  
 If the gain of the existing servo amplifier is extremely high, there may be slight differences in characteristics upon primary replacement. Make sure to set the gain again.

Note 2. When turning on the power supply, also turn on the 24 V DC power supply for the external interface. Otherwise, AL. E6.1 occurs.

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

### 1. SUMMARY

This [Appendix 1] describes the "MR-J4-B\_-RJ020" servo amplifier that supports the SSCNET conversion unit for MR-J2S-B\_ and "MR-J4-T20" SSCNET conversion unit for MR-J2S-B\_.

Ensure to use the MR-J4-T20 with the MR-J4-B\_-RJ020.

Combining MR-J4-B\_-RJ020 with MR-J4-T20 makes it possible to connect MR-J4-B\_-RJ020 with SSCNET for MR-J2S-B\_

The MR-J4-B\_-RJ020 servo amplifier is equipped with "J2S compatible mode (factory default)" and "J4 mode" as the operation mode. "J2S compatible mode" is the operation mode compatible with the conventional features of the MR-J2S-B series.

When using in the J4 mode, refer to "[Appendix 1] 12 MODE SWITCHING METHOD".

#### 1.1 Features

##### 1.1.1 Servo amplifier connectable to SSCNET compatible controller

MELSERVO-J4 series servo amplifier connectable to SSCNET connected to MR-J2S-B\_

Using the SSCNET conversion unit for MR-J2S-B\_, the MR-J4-B\_ servo amplifier can be connected to the SSCNET compatible servo system controller for MR-J2S-B\_.

- The MR-J4-B\_-RJ020 servo amplifier combined with the MR-J4-T20 SSCNET conversion unit can be connected to the SSCNET compatible servo system controller for MR-J2S-B\_.
- The MR-J4-compatible HG series servo motor can be driven.
- One SSCNET conversion unit is required per amplifier.
- New features of MR-J4 cannot be used because the amplifier operates in J2S mode.
- The servo amplifier is recognized as MR-J2S by the controller. However, for the parameter described in the following table, changes to the program or the parameter are required as necessary.

MR-J4-B\_-RJ020 servo amplifier that supports the SSCNET conversion unit for MR-J2S-B\_  
MR-J4-T20 SSCNET conversion unit for MR-J2S-B\_

Parameter that need to be checked for if a change is required

Parameter number	Name	Initial value	Setting value	Description
Pr. 25	Adaptive vibration suppression control	0000h	0000h	The MR-J4-B_-RJ020 servo amplifier with software version A9 or later is compatible with adaptive vibration suppression control. For details, refer to "9.2 (8) Adaptive vibration suppression control function" in this section.

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

---

### 1.1.2 SSCNET conversion unit "MR-J4-T20"

- Connect the conversion unit to connector CN9 on the side of MR-J4-\_B\_-RJ020.
- The mounting method for guide pins, etc., is the same as that for optional MR-J3 units such as MR-J3-D01.
- Two SSCNET connectors are provided on the SSCNET conversion unit.

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

## 2. DIFFERENCES BETWEEN MR-J2S-\_B\_ AND MR-J4-\_B\_-RJ020

### 2.1 Function Comparison Table

Item		MR-J2S-_B_	MR-J4-_B_-RJ020 MR-J4-T20	Remarks
System	Standard	○	○	
	Full.	Special specification	○	
	Lin.	Special specification	×	
	DDM	×	×	
Supported network		SSCNET	SSCNET	
Supported motors		MR-J2S catalog motor MR-J2S optional motor	HG motor (Operates as 17 bits) HC-KFS motor HC-MFS motor HC-LFS motor HC-SFS motor HC-RFS motor HC-UFS motor HA-LFS motor	For details, refer to "[Appendix 1] Chapter 7" of this document.
I/O power supply		Internal 24 V	External 24 V	An external power supply (24 V 100 mA) is required for DIO.
Battery		MR-BAT / A6BAT	MR-BAT6V1SET	
Serial communication		Half pitch 20 pins	miniD-Sub	Using conversion cable. MR-J4T20CH00
MR-J2S control function	Auto Tuning	○	○	Gain compatibility
	Model applicable control	○	○	
	Machine resonance suppression filter	○	○	
	Machine analyzer function	○	○	
	Machine simulation	○	× (Note 1)	
	Gain search function	○	× (Note 1)	
	Adaptive vibration suppression control	○	○ (Note 1, 2)	For details, refer to "9.2 (8) Adaptive vibration suppression control function" in this section.

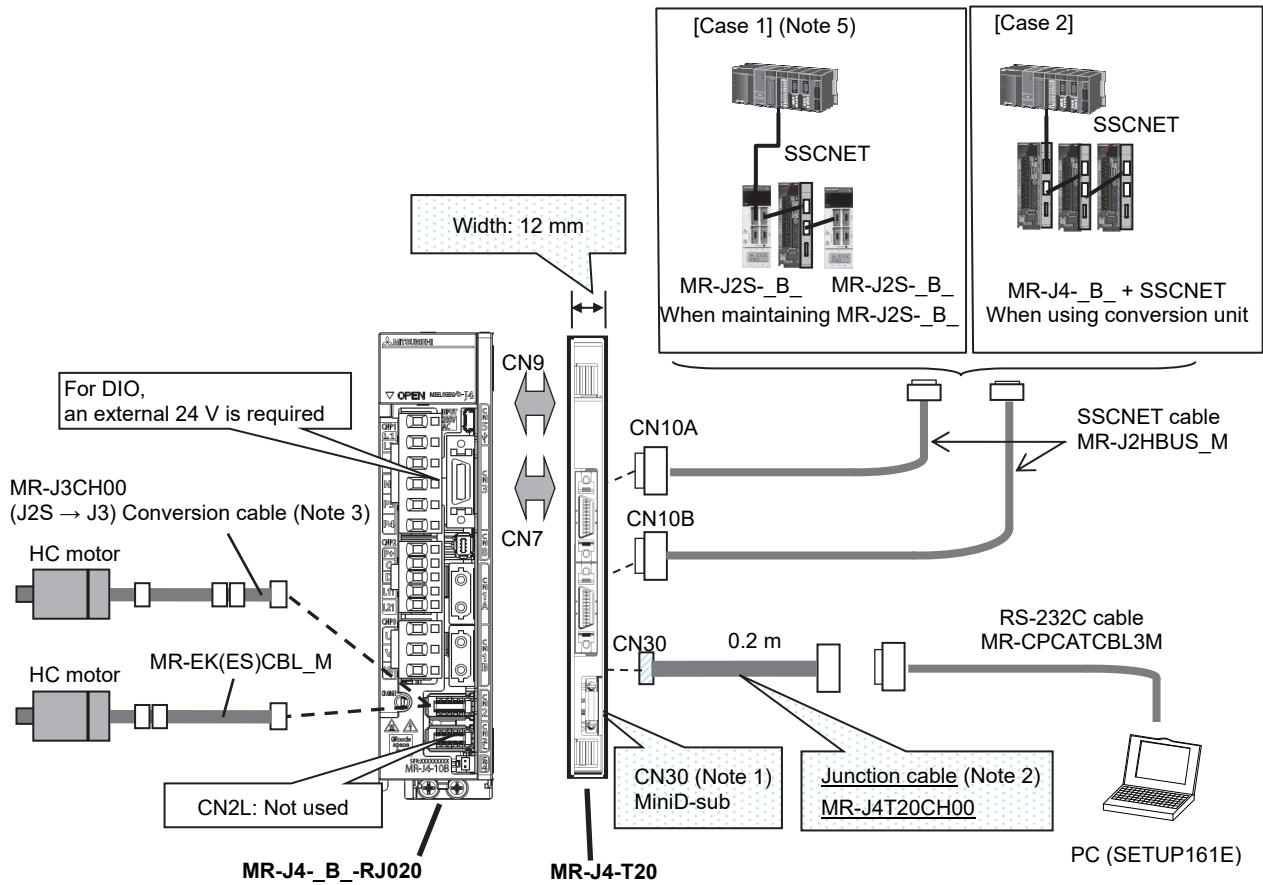

Note 1. This is available for the MR-J4-\_B\_-RJ020 servo amplifiers with software version A9 or later.

2. Enabling the adaptive vibration suppression control of [Pr. 25] of a servo amplifier with software version A8 or earlier will cause [AL. 37 Parameter error].

Manually set [Pr. 18] Machine resonance suppression filter 1.

POINT
<ul style="list-style-type: none"><li>● The MR-J4-_B_-RJ020 servo amplifier with software version A9 or later is compatible with adaptive vibration suppression control. Set [Pr. 25] of the MR-J4-_B_-RJ020 servo amplifier with software version A8 or earlier, to "00 __" (Adaptive vibration suppression control disabled). When using adaptive vibration suppression control with the MR-J2S-_B_ servo amplifier, manually set [Pr. 18] Machine resonance suppression filter 1 using the machine analyzer function of MR Configurator.</li><li>● Setting [Pr. 25] to "1 __", "_ 1 __", or "_ 2 __" for the MR-J4-_B_-RJ020 servo amplifier with software version A8 or earlier will cause [AL. 37 Parameter error].</li><li>● Setting [Pr. 25] to "1 __" or "_ 2 __" for the MR-J4-_B_-RJ020 servo amplifier with software version A9 or later will cause [AL. 37 Parameter error].</li><li>● The fully closed loop system is enabled only in J2S compatibility mode.</li><li>● The fully closed loop system function can be used for servo amplifiers or drive units with the following software versions.<ul style="list-style-type: none"><li>· A4 or later for 7 kW or less</li><li>· A6 or later for 11 kW or more</li></ul></li><li>● In the fully closed loop system, the following cable can be used for the servo motor encoder:<ul style="list-style-type: none"><li>· Two-wire type for software version A4 or later</li><li>· Two-wire and four-wire types for software version A6 or later</li></ul></li></ul>

3. SYSTEM CONFIGURATION

- Note 1. While the SSCNET connector CN10A and CN10B use the same D-sub connector as MR-J2S-\_B\_, the RS-232C connector uses a mini D-sub connector. Therefore, the MR-J4T20CH00 junction cable is used to connect to a conventional cable (MR-CPCATCBL3M).
- Note 2. DIO (DI: one point; DO: one point; ABZ output; Monitor output) uses CN3 of MR-J4. RS-232C is connected using CN30 of MR-J4-T20.
- Note 3. Use MR-J3CH00 or SC-J2SJ4ENC03M (manufactured by Mitsubishi Electric System & Service Co., Ltd.).
- Note 4. The application "MR-J4(W)-B Change mode" or "MR Mode Change" through USB communication function of the servo amplifier is necessary for using the MR-J4-\_B\_-RJ020 in J4/J3 convertible mode. It is not necessary when using MR-J4-\_B\_-RJ020 in J2S compatible mode. The application "MR-J4(W)-B Change mode" or "MR Mode Change" are available with MR Configurator2 Version 1.27D and later.
- Note 5. When a servo amplifier other than MR-J2S-\_B\_ series, MR-J2M-B series and MR-J2-03B5 is used with a controller, the MR-J4-\_B\_-RJ020 + MR-J4-T20 SSCNET conversion unit cannot be used.

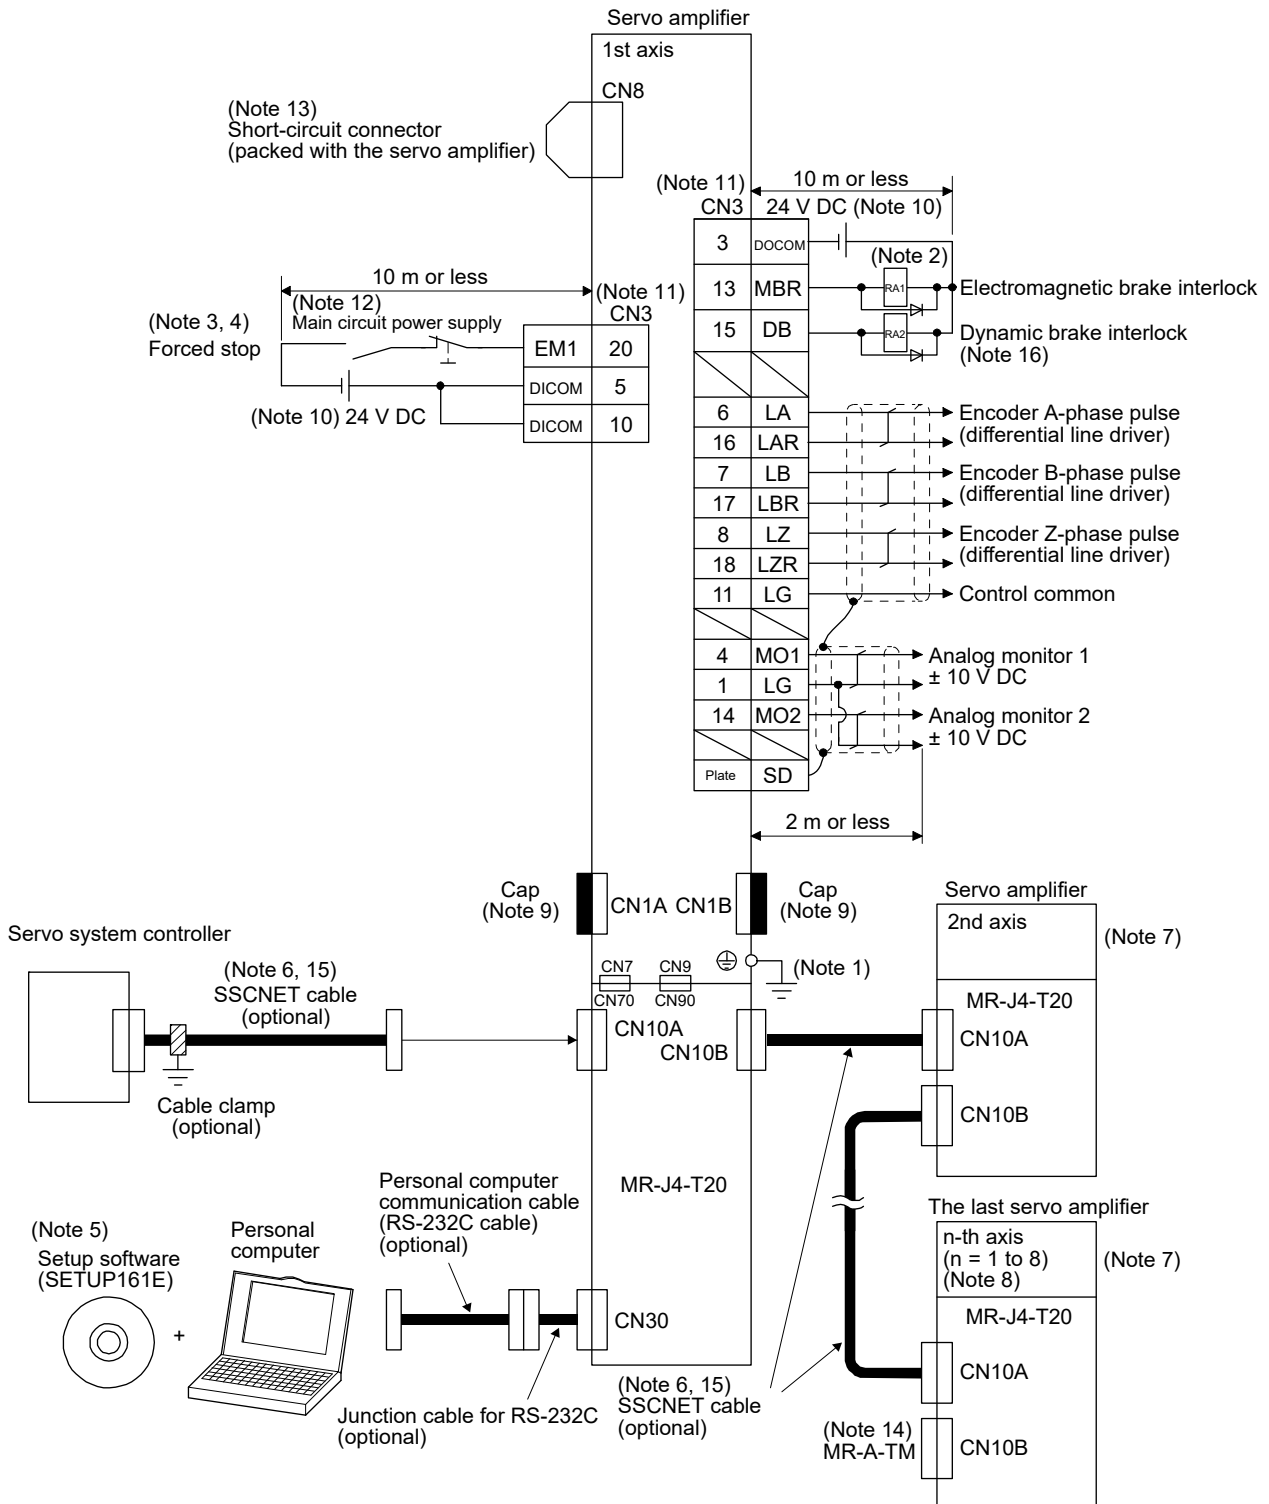

POINT
<p>● For large capacity of 30 kW or more, the position of PN terminal is different, so also change the converter unit when replacing MR-J2S-_B_.</p>

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

## 4. I/O SIGNAL CONNECTION EXAMPLE

**POINT**

● The forced stop switch is not required for the servo system controllers A171SH, A172SH, A173UH, and A273UH. Set [Pr. 23] to "\_\_\_1h (Disabled)" for these models.

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

- Note
1. To prevent electric shock, always connect the protective earth (PE) (⊕terminal (marked) of the servo amplifier to the protective earth (PE) of the cabinet.
  2. Do not mistake the diode direction. If connected the other way round, the servo amplifier will malfunction and no signal will be output. Also, the protection circuits of EM1 (forced stop), etc., may not operate.
  3. If the controller does not have the emergency stop function, make sure to install the forced stop switch (contact B).
  4. At the time of operation, make sure to turn on EM1 (forced stop). (Normally closed contact)
  5. Use the MRZJW3-SETUP161E.
  6. The SSCNET cable varies according to the controller or servo amplifier that is connected in front and back. Use the following table as a guide for choosing the SSCNET cable. When a servo amplifier other than MR-J2S-\_B\_ series, MR-J2M-B series and MR-J2-03B5 is used with a controller, the MR-J4-\_B\_-RJ020 + MR-J4-T20 SSCNET conversion unit cannot be used.

		MR-J4-_B_-RJ020 + MR-J4-T20
QD75M		MR-J2HBUS_M
A1SD75M		MR-J2HBUS_M-A
Motion Controller	Q172CPU(N)	Q172J2BCBL_M(-B)
	Q173CPU(N)	Q173J2B_CBL_M
	A171SHCPU (N), A172SHCPU (N), A173UHCPU, A273UHCPU	MR-J2HBUS_M-A
	MR-J2S-_B_/MR-J2-03B5 MR-J4-_B_-RJ020 + MR-J4-T20	MR-J2HBUS_M

7. The second and subsequent connections of servo amplifier are omitted.
8. Up to 8 axes (n= 1 to 8) can be connected.
9. The CN1 and the CN1B cannot be used in J2S compatible mode. Make sure to cap the CN1A and the CN1B connectors.
10. Supply 24 V DC  $\pm$  10% from an external power supply for the interface. Capacity of these power supplies should be 100 mA in total. For convenience, the power supply of 24 V DC for input signals and output signals are stated separately, it can be configured by one.
11. A signal with the same name is connected inside the servo amplifier.
12. In order to prevent unexpected restarting of the servo amplifier, configure the circuit so that EM1 is also turned off when the main circuit power supply is turned off.
13. The STO functions cannot be used in J2S compatible mode. Make sure to install the short-circuit connector supplied with the servo amplifier.
14. Make sure to install the terminal connector (MR-A-TM) on the CN10B of the final servo amplifier.
15. Use the SSCNET cable with the total extension of 30 m or less. It is recommended to use cable clamps and data line filters (3 to 4 connected in series) near the connector pullout of the controller to enhance noise immunity.
16. When using the external dynamic brake with the servo amplifier of 11 kW or more, enable DB (Dynamic brake interlock) by setting [Pr.2] to "\_1\_".

5. PARAMETERS

POINT
<p>● The servo amplifier is recognized as MR-J2S by the controller.                      However, for some parameters, changes to the program or the parameters are required as necessary.</p>

The parameters shown in this chapter are a minimum number of parameters that need to be set for replacement. Depending on the settings of the currently used servo amplifier, parameters other than these may need to be set.

For details of the parameters, refer to the "Conversion Unit for SSCNET of MR-J2S-\_B\_ Compatible AC Servo MR-J4-\_B\_-RJ020/MR-J4-DU\_B\_-RJ020/MR-CR55K\_/MR-J4-T20 SERVO AMPLIFIER INSTRUCTION MANUAL".

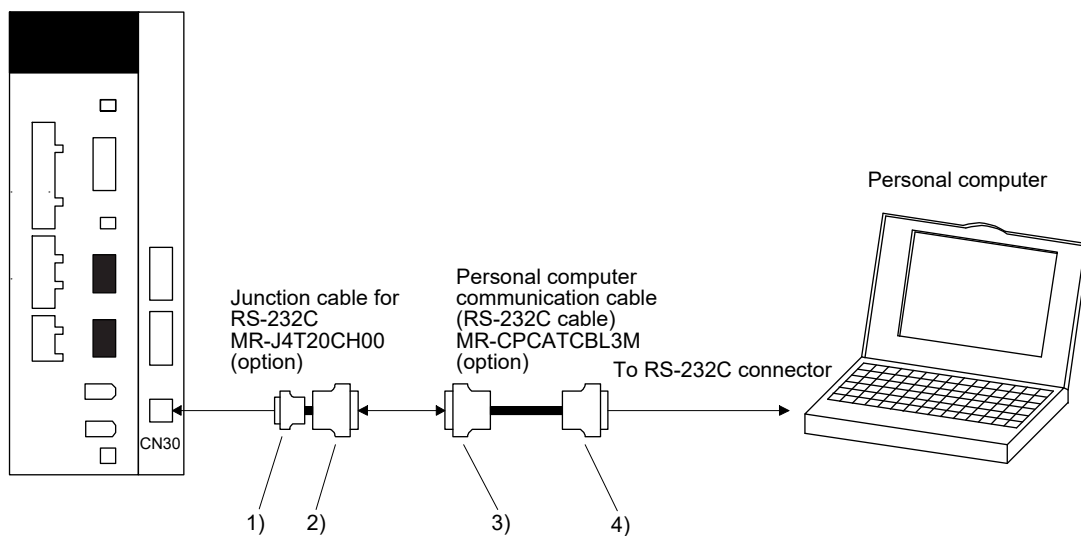

- (1) When using adaptive vibration suppression control  
 Refer to "9.2 (8) Adaptive vibration suppression control function" in this section.
- (2) Changing the load to motor inertia ratio  
 Refer to "9.2 (7) Changing the load to motor inertia ratio" in this section.

6. RS-232C COMMUNICATION CABLE

This section indicates the cable connecting the MR-J4-T20 and a personal computer through RS-232C communication. The RS-232C communication cable consists of the following two cables.

Cable model	Cable length	Product name
MR-J4T20CH00	0.2 m	Junction cable for RS-232C
MR-CPCATCBL3M	3 m	Personal computer communication cable (RS-232C cable)

(1) Connection of MR-J4-T20 to a personal computer

	HA-LFS37K2		MR-J4-DU37KB-RJ020	A4 or later	A4 or later
	HA-LFS30K24	MR-CR55K4	MR-J4-DU30KB4-RJ020	A4 or later	A4 or later
	HA-LFS37K24		MR-J4-DU37KB4-RJ020	A4 or later	A4 or later
	HA-LFS45K24		MR-J4-DU45KB4-RJ020	A4 or later	A4 or later
	HA-LFS55K24		MR-J4-DU55KB4-RJ020	A4 or later	A4 or later

Note. These servo motors support J4 mode/J2S compatibility mode. J3 compatibility mode is not supported.

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

(2) List of servo motor combinations and S/W versions for HC-\_F series servo motor

**POINT**

● Servo motors of this series can be driven only in the "J2S compatibility mode".  
When the "MR-J4-T20" unit is removed and servo amplifiers are used in the "J4 mode", servo motors of this series need to be replaced.

Servo motor series name	Servo motor model (Including models with gear reducers/brakes)	Servo amplifier model	Optional unit model	Servo amplifier software version (Note)	
				J4 mode	J2S compatibility mode
HC-MF 3000 r/min series	HC-MF053	MR-J4-10B-RJ020	MR-J4-T20	Not compatible	A6 or later
	HC-MF13			Not compatible	A6 or later
	HC-MF23	MR-J4-20B-RJ020		Not compatible	A6 or later
	HC-MF43	MR-J4-40B-RJ020		Not compatible	A6 or later
	HC-MF73	MR-J4-70B-RJ020		Not compatible	A6 or later
HC-SF 1000 r/min series	HC-SF81	MR-J4-100B-RJ020		Not compatible	A6 or later
	HC-SF121	MR-J4-200B-RJ020		Not compatible	A6 or later
	HC-SF201			Not compatible	A6 or later
	HC-SF301	MR-J4-350B-RJ020		Not compatible	A6 or later
HC-SF 2000 r/min series	HC-SF52	MR-J4-60B-RJ020		Not compatible	A6 or later
	HC-SF102	MR-J4-100B-RJ020		Not compatible	A6 or later
	HC-SF152	MR-J4-200B-RJ020		Not compatible	A6 or later
	HC-SF202			Not compatible	A6 or later
HC-SF 3000 r/min series	HC-SF352	MR-J4-350B-RJ020		Not compatible	A6 or later
	HC-SF53	MR-J4-60B-RJ020		Not compatible	A6 or later
	HC-SF103	MR-J4-100B-RJ020	Not compatible	A6 or later	
	HC-SF153	MR-J4-200B-RJ020	Not compatible	A6 or later	
HC-SF203	Not compatible		A6 or later		
HC-SF353	MR-J4-350B-RJ020	Not compatible	A6 or later		
HC-KF series			Not compatible	Not compatible	
HA-FF series					
HC-RF series					
HC-UF 2000 r/min series					
HC-UF 3000 r/min series					

Note. When a servo amplifier other than MR-J2S-\_B\_ series, MR-J2M-B series, or MR-J2-03B5 is used with a controller, the MR-J4-\_B\_-RJ020 + MR-J4-T20 SSCNET conversion unit cannot be used.

8. LIST OF COMBINATIONS AND SOFTWARE VERSIONS FOR SERVO SYSTEM CONTROLLERS

The table 8.1 lists servo system controllers that can be used in combination with MR-J4-\_B\_-RJ020 + MR-J4-T20.

Table 8.1 List of applicable servo system controllers

Model	Servo system controller model	Compatible network	Servo amplifier software version
Motion controller	Q172CPU(N)(-T)	SSCNET	A0 or later (Note 3)
	Q173CPU(N)(-T)		
	A171SHCPU(N) (Note 1)		A0 or later
	A172SHCPU(N) (Note 1)		
	A173UHCPU(-S1) (Note 1)		
	A273UHCPU(-S3) (Note 1)		
Positioning module	QD75M		A2 or later
	A1SD75M (Note 2)		
	AD75M (Note 2)		
	AD778M/AD774M		Not compatible
	A1SD778M/A1SD774M		
Position board	MR-MC10	SSCNET II	A2 or later
	MR-MC30		
Interface board	MR-MCF30		A6 or later
	MR-MCF10		

- Note
1. For versions of the OS that supports MR-J4-\_B\_-RJ020, refer to table 8.2.
  2. [Pr. 100 servo series] of the controller has no setting value corresponding to the MR-J2S-B or the selection of "MR-J2S-\_B\_" is Not compatible in the GX Configurator-AP screen. Set "MR-J2-\_B\_" for [Pr. 100 servo series].
  3. SV54 is compatible with the servo amplifier's software version A2 or later.

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

Table 8.2 Versions of motion controller OS that support MR-J4-\_B\_-RJ020

Controller model	OS model	OS version
Q172CPU(N)(-T)	SW6RN-SV13QD	First edition or later
	SW6RN-SV22QC	
	SW5RN-SV43QC	
	SW5RN-SV54QD	
Q173CPU(N)(-T)	SW6RN-SV13QB	
	SW6RN-SV22QA	
	SW5RN-SV43QA	
	SW5RN-SV54QB	
A171SHCPU(N)	SW0SRX-SV13G	AF or later
	SW0SRX-SV22F	T or later
	SW0SRX-SV43F	
A172SHCPU(N)	SW3RN-SV13D	G or later
	SW3RN-SV22C	AF or later
	SW0SRX-SV13D	
	SW0SRX-SV22C	
	SW0SRX-SV43C	T or later
A173UHCPU(-S1)	SW3RN-SV13B	G or later
	SW3RN-SV22A	AF or later
	SW2SRX-SV13B	
	SW2SRX-SV22A	T or later
	SW2SRX-SV43A	
A273UHCPU	SW2SRX-SV13V	AF or later
	SW2SRX-SV22U	T or later
	SW2SRX-SV43U	
A273UHCPU-S3	SW3RN-SV13X	G or later
	SW3RN-SV22W	

Table 8.3 Peripheral software versions of motion controllers that support MR-J4-B-RJ020

Peripheral software model		Peripheral software version
Windows edition	SW6RNC-GSV	First edition or later
	SW3RNC-GSV	G or later
DOS edition	SW2SRX-GSV13P	AD or later
	SW2SRX-GSV22P	
	SW2SRX-GSV43P	T or later

### 9. SAFETY PRECAUTIONS

#### 9.1 Replacing MR-J2S-\_B\_ Servo Amplifier with MR-J4-\_B\_-RJ020 Servo Amplifier

Note the following when replacing the MR-J2S-\_B\_ servo amplifier with the MR-J4-\_B\_-RJ020 servo amplifier.

- (1) The capacity of mounting holes differs. For compatibility of mounting holes, refer to "[Appendix 1] 11.1 Comparison of Dimensions".
- (2) The dimensions of the MR-J4-\_B\_-RJ020 servo amplifier combined with MR-J4-T20 may be larger than the MR-J2S-\_B\_ servo amplifier. Refer to "[Appendix 1] 11.1 Comparison of Dimensions".
- (3) The wire size may differ from that of the MR-J2S-\_B\_ servo amplifier. Refer to "Part 9: Review on Replacement of Optional Peripheral Equipment 4. Wire Size".
- (4) If the HG series servo motor is used in J2S compatible mode, the encoder resolution per rotation of the servo motor is not 4194304 pulses/rev (22 bit) but becomes 131072 pulses/rev (17 bit).
- (5) When using the HG series servo motor at the maximum torque, set the torque limit to 500% on the servo system controller. When setting the maximum torque in test operation mode, change the setting of [Pr. 10 Forward rotation torque limit] and [Pr. 10 Reverse torque limit] to 500 %.
- (6) Operation without motor through the setup software (SETUP161E) cannot be used. When operating motor, set [Pr. 24] to "\_ 1 \_ \_".
- (7) When using [Pr. 13 Position control gain 1] of the MR-J4-\_B\_-RJ020 servo amplifier and the MR-J2S-\_B\_ servo amplifier together in interpolation mode, etc., check the droop pulses of each shaft and readjust the gain as necessary.
- (8) The MR-J4-\_B\_-RJ020 servo amplifier with software version A9 or later is compatible with adaptive vibration suppression control. Set [Pr. 25] of the MR-J4-\_B\_-RJ020 servo amplifier with software version A8 or earlier, to "00 \_ \_" (Adaptive vibration suppression control disabled). When using adaptive vibration suppression control with the MR-J2S-\_B\_ servo amplifier, manually set [Pr. 18] Machine resonance suppression filter 1 using the machine analyzer function of MR Configurator. Setting [Pr. 25] to "1 \_ \_ \_", "\_ 1 \_ \_", or "\_ 2 \_ \_" for the MR-J4-\_B\_-RJ020 servo amplifier with software version A8 or earlier will cause [AL. 37 Parameter error]. Setting [Pr. 25] to "1 \_ \_ \_" or "\_ 2 \_ \_" for the MR-J4-\_B\_-RJ020 servo amplifier with software version A9 or later will cause [AL. 37 Parameter error].
- (9) The connector for SSCNET cable connection cannot supply power to the encoder. When using with the absolute position sensor detection system, make sure to connect the battery to the CN4 connector of the MR-J4-\_B\_-RJ020 servo amplifier.

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

---

- (10) In this [Appendix 1], it only describes the encoder cable and the regenerative option for connecting the HC-\_FS series and the HA-\_FS series servo motors to the MR-J4-\_B\_-RJ020 servo amplifier. For details of the options for the servo amplifier, refer to Chapter 11 of the "MR-J4-\_B\_-RJ020 MR-J4-T20 Servo Amplifier Instruction Manual". For options for the HC-\_FS series and the HA-\_FS series servo motors, refer to "MR-J2S-\_B Servo Amplifier Instruction Manual (SH(NA)030007)" and "MELSERVO Servo Motor Instruction Manual (SH(NA)3181)".

POINT
<ul style="list-style-type: none"><li>● When using servo motors of the HA-_FS and the HC-_FS series together, "regeneration option" and "external dynamic brake unit" can be used with the products used in MR-J2S-_B_. To change to the HG series servo motor, change "regeneration option" and "external dynamic brake unit" after referring to the instruction manual for MR-J4-_B_.</li><li>● For 1-phase 200 V AC to 240 V AC, connect the power supply to L1 and L3. The connection destination is different from that of the MR-J2S series servo amplifier. When replacing the MR-J2S with the MR-J4, make sure that the connection destination is correct.</li><li>● When using (HA-LFS series) servo motors that have thermal terminals and not connecting thermal signals to the MR-J4 servo amplifier, set [Pr. 58] to "___ 1h (Disabled)". The overheat protection of a servo motor is not enabled. Configure a protective circuit.</li></ul>

- The initializing time (the time taken from power-on to reception of servo-on) after power-on of the MR-J2S-\_B\_ servo amplifier and MR-J4-\_B\_-RJ020 servo amplifier becomes as follows.
  - MR-J2S-\_B\_ : (up to 3 s)
  - MR-J4-\_B\_-RJ020: (up to 4 s)
 Therefore, note the following when replacing the MR-J2S-\_B\_ servo amplifier with the MR-J4-\_B\_-RJ020 servo amplifier.
  - When using the electromagnetic brake to prevent a drop in a vertical lift application or the like with an external timer to adjust the brake release time, the lift may drop due to a longer servo-lock time. Adjust the brake release time as necessary or use MBR (electromagnetic brake interlock).
  - The time taken from power-on to operation of the servo motor may become longer.
- The signal arrays of the connectors for CN3 differ between the MR-J4-\_B\_-RJ020 and the MR-J2S-\_B\_. Refer to the table below.

 Note

CN3 connector Pin number	Abbreviation		Note when replacing from the MR-J2S-_B_
	MR-J2S-_B_	MR-J4-_B_-RJ020	
2	RXD		For manufacturer setting. Do not connect anything to these. Connect the RXD to the CN30 connector (13 pin) of the MR-J4-T20.
3	SG	DOCOM	An external 24 V DC power supply is required for the interface. Change the wiring as necessary.
5	COM	DICOM	
10	VDD	DICOM	
12	TXD		For manufacturer setting. Do not connect anything to these. Connect the TXD to the CN30 connector (14 pin) of the MR-J4-T20.

- The electronic dynamic brake operates in the initial state for the HG series servo motors with a 600 W or smaller capacity. The time constant "τ" for the electronic dynamic brake will be shorter than that for normal dynamic brake. Therefore, coasting distance will be shorter than in normal dynamic brake. To set the electronic dynamic brake, refer to [Pr. 39] and [Pr. 56].

POINT

- When the power is turned on, voltage, analog monitor output voltage and output signal may become unstable.

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

### 9.2 Differences with the MR-J2S Series

#### (1) Differences with the MR-J2S Series

Item		MR-J2S series	MR-J4- B_-RJ020 + MR-J4-T20 series
1	Dynamic brake	Built-in (0.1 kW to 7 kW) External (11 kW to 55 kW)	Built-in (0.1 kW to 7 kW) External (11 kW to 55 kW) <b>Coasting distance is different.</b>
2	Control circuit power	(100 V class) 1-phase 100 V AC to 120 V AC (200 V class) 1-phase 200 V AC to 230 V AC (400 V class) 24 V DC (up to 7 kW) 1-phase 380 V AC to 480 V AC (11 kW to 55 kW)	(100 V class) 1-phase 100 V AC to 120 V AC (200 V class) 1-phase 200 V AC to <b>240 V AC</b> (400 V class) 1-phase 380 V AC to 480 V AC
3	Main circuit power	(100 V class) 1-phase 100 V AC to 120 V AC (200 V class) 1-phase 230 V 3-phase 200 V AC to 230 V AC (up to 750 W) 3-phase 200 V AC to 230 V AC (1 kW to 37 kW) (400 V class) 3-phase 380 V AC to 480 V AC	(100 V class) 1-phase 100 V AC to 120 V AC (200 V class) 1-phase/3-phase 200 V AC to <b>240 V AC</b> (to 750 W) 3-phase 200 V AC to <b>240 V AC</b> (1 kW to 37 kW) (400 V class) 3-phase 380 V AC to 480 V AC

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

### (2) Startup in the absolute position detection system

[AL. 25 Absolute position erased] occurs when switching the power on for the first time, but that is not a malfunction. When an alarm occurs, the alarm can be canceled by shutting off the power after leaving the power on for a few minutes with the alarm being issued. If power is switched on with the servo motor operated at the speed of 500 r/min or higher, position mismatch may occur due to external force. Power must therefore be switched on when the servo motor is stopped.

POINT
<ul style="list-style-type: none"> <li>● There are two kinds of batteries to use when configuring absolute position detection system: one is the MR-BAT6V1SET battery and the other is the MR-BAT6V1BJ battery for battery extension cable. When using the MR-BAT6V1BJ battery for battery extension cable, it has the following features compared to the MR-BAT6V1SET battery.               <ul style="list-style-type: none"> <li>• The encoder cable can be removed from the servo amplifier.</li> <li>• The battery can be replaced with the control circuit power supply turned off.</li> </ul> </li> <li>● When the encoder loses the absolute position data, make sure to operate after setting the home position. The encoder loses the absolute position data in the following cases. It may also lose the absolute position data when the battery is used outside the specified range.               <p>When the MR-BAT6V1SET battery is used</p> <ul style="list-style-type: none"> <li>• Removed the encoder cable.</li> <li>• Replaced the battery with the control circuit power switched off.</li> </ul> <p>When the battery for the MR-BAT6V1BJ battery extension cable is used</p> <ul style="list-style-type: none"> <li>• Removed the connector and the cable between the servo motor and the battery.</li> </ul> </li> <li>● The battery for the MR-BAT6V1BJ battery extension cable only supports the HG series servo motor.</li> <li>● The connector for the SSCNET cable connection cannot supply power to the encoder. When using with the absolute position sensor detection system, make sure to connect the battery to the CN4 connector of the servo amplifier.</li> </ul>

### (3) MR-BAT6V1SET battery specifications

Refer to the following table for items that differ from when using an HG series servo motor.

Item	Description
Maximum speed at power failure [r/min]	500
Battery backup time	Approximately 10,000 h (equipment power supply: off; ambient temperature: 20 °C)

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

### (4) Confirmation of absolute position detection

POINT
<ul style="list-style-type: none"> <li>● When using the setup software (SETUP161E) with the MR-J4-_B_-RJ020 servo amplifier, select "Setup" - "System settings" and set the "Model selection" to "MR-J2S-_B_".</li> </ul>

The absolute position data can be confirmed from the setup software (SETUP161E).  
 Select "Diagnosis" - "Display ABS data" and open the absolute position data display screen.

### (5) Connection of battery

Connect the battery as shown in the following diagram.

### (6) Gain adjustment

When using [Pr. 13 Position control gain 1] of the MR-J4-\_B\_-RJ020 servo amplifier and the MR-J2S-\_B\_ servo amplifier together in interpolation mode, etc., check the accumulated pulses of each axis and readjust the gain as necessary.

(7) Changing the load to motor inertia ratio

POINT
<ul style="list-style-type: none"> <li>● The software version A6 or later supports the "load to motor inertia ratio" function.</li> <li>● When the "load to motor inertia ratio" function is enabled, always check the setting value of [Pr. 35]. If a proper value has not been set in [Pr. 35], the servo motor may operate unexpectedly.</li> </ul>

When the moment of inertia of a servo motor is changed due to replacement of the MR-J2S series servo motor (HC-\_FS/HA-\_FS series) with the MR-J4 series servo motor (HG series), the load to motor inertia ratio needs to be changed to a proper value.

Change the load to motor inertia ratio with one of the following methods 1) and 2). Check that operation can be performed normally after the setting with one of the methods. If a problem such as vibration occurs, manually set the load to motor inertia ratio 3).

1) Setting by auto tuning

After replacing servo motors, perform auto tuning in the mode in which the load to motor inertia ratio is estimated by setting [Pr. 8 Auto tuning]. For details, refer to Section 6.2 "Auto tuning" of "Conversion Unit for SSCNET of MR-J2S-B Compatible AC Servo MR-J4-\_B\_-RJ020/MR-J4-DU-\_B\_-RJ020/MR-CR55K\_/MR-J4-T20 SERVO AMPLIFIER INSTRUCTION MANUAL". When using the gain switching function, change [Pr. 52 Load to motor inertia ratio 2] as necessary.

2) Setting with the parameter for the load to motor inertia ratio (software version A6 or later)

When auto tuning is not performed or only the load to motor inertia ratio is changed, the load to motor inertia ratio can be changed by setting the parameter for the load to motor inertia ratio. To set the load to motor inertia ratio, set "\_\_\_1" in [Pr. 59 Option function B] and set the ratio calculated by dividing the moment of inertia of the servo motor before replacement by the moment of inertia of the servo motor after replacement in [Pr. 35 Load to motor inertia ratio] in percentage.

Example) When a HC-KFS053 motor is replaced with a HG-KR053 motor, set "\_\_\_1" in [Pr. 59 Option function B] and 118 in [Pr. 35 Load to motor inertia ratio].

$$\begin{aligned}
 \text{Pr.35} &= \frac{\text{Moment of inertia before replacement}}{\text{Moment of inertia after replacement}} \times 100[\%] \\
 &= \frac{\text{Moment of inertia for HC - KFS053}}{\text{Moment of inertia for HG - KR053}} \times 100 \\
 &= \frac{0.053 \times 10^{-4}}{0.0450 \times 10^{-4}} \times 100 = 118
 \end{aligned}$$

- \* The load to motor inertia ratio function is enabled when the value of [Pr. 8 Auto tuning] is 2, 3, or 4. The load to motor inertia ratio function is disabled when the value of [Pr. 8 Auto tuning] is 0 or 1. In this case, the ratio is not applied.
- \* For the moment of inertia of a servo motor, refer to the instruction manual of the servo motor used or Section 2.5 "Comparison of Moment of Inertia" in Part 8.
- \* The load to motor inertia ratio function changes the internal value of the load to motor inertia ratio using the ratio calculated by dividing the moment of inertia of the servo motor before replacement by the moment of inertia of the servo motor after replacement. The characteristics of the servo motor after replacement may not be the same as those of the servo motor before replacement only by changing the load to motor inertia ratio. If a problem occurs, manually set the load to motor inertia ratio 3).
- \* This function is not supported by geared servo motor.
- \* After GD2 ([Pr. 12]) is estimated by auto tuning, disable the load to motor inertia ratio function by setting [Pr. 59 Option function B] to "\_\_\_0" and [Pr. 35 Load to motor inertia ratio] to 0.

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

No.	Symbol	Name and function	Initial value [Unit]	Setting range
35	TTT	<p>Load to motor inertia ratio (load inertia ratio)</p> <p>Set the percentage of the load to the motor inertia ratio to the servo motor inertia moment (load inertia ratio).</p> <p>This setting can be enabled or disabled with [Pr. 59] (OPB). Setting [Pr. 59] (OPB) to "___1" enables this setting.</p> <p>When [Pr. 35] is "0 [%]", the parameter for the load to motor inertia ratio is not enabled regardless of the setting of [Pr. 59].</p>	0 [%]	0 to 65535
59	*OPB	<p>Option function B: Select a setting of the load to motor inertia ratio (load inertia ratio).</p> <div style="display: flex; align-items: center; margin-bottom: 10px;"> <div style="border: 1px solid black; width: 20px; height: 20px; margin-right: 5px;"></div> <div style="border: 1px solid black; width: 20px; height: 20px; margin-right: 5px;"></div> <div style="border: 1px solid black; width: 20px; height: 20px; margin-right: 5px;"></div> <div style="border: 1px solid black; width: 20px; height: 20px; margin-right: 5px;"></div> <div style="border: 1px solid black; width: 20px; height: 20px;"></div> </div> <p style="margin-left: 40px;">Ratio selection for the load to motor inertia ratio (load inertia ratio)</p> <p style="margin-left: 40px;">0: Disabled The ratio setting of [Pr. 35] (TTT) is disabled. 1: Enabled The ratio setting of [Pr. 35] (TTT) is enabled.</p> <p style="margin-left: 40px;">* Before enabling this function, check the setting value of [Pr. 35]. If a proper value has not been set in [Pr. 35], the motor may operate unexpectedly.</p>	0000	0000h to 1111h

### 3) Manual setting

If a problem occurs with the above 1) or 2), disable the load to motor inertia ratio function and manually adjust the gain value. For how to manually adjust the gain value, refer to section 6.3 "Manual mode 1" of "Conversion Unit for SSCNET of MR-J2S-B Compatible AC Servo MR-J4-\_B\_-RJ020/MR-J4-DU\_B\_-RJ020/MR-CR55K\_/MR-J4-T20 SERVO AMPLIFIER INSTRUCTION MANUAL".

### (8) Adaptive vibration suppression control function

POINT
<ul style="list-style-type: none"> <li>● The adaptive vibration suppression control function is supported by servo amplifier with software version A9 or later. (Enabling the adaptive vibration suppression control of [Pr. 25] of a servo amplifiers with software version A8 or earlier will cause [AL. 37 Parameter error].) For the items not described in this Replacement Manual, refer to "MELSERVO-J4 series MR-J4-_B_-RJ020 Servo Amplifier Instruction Manual".</li> <li>● The characteristics of the adaptive vibration suppression control differ from those for MR-J2S-_B_.</li> <li>● When this function is used, [Pr. 61] "Machine resonance suppression filter 2" cannot be used.</li> </ul>

Adaptive vibration suppression control is a function in which the servo amplifier detects mechanical resonance and sets filter characteristics automatically to suppress mechanical vibration.

Adaptive filter II (adaptive tuning) which is equivalent to that of MR-J4-\_B\_ is available for MR-J4-\_B\_-RJ020 as the adaptive vibration suppression control function.

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

### (a) Configuration of adaptive vibration suppression control function

Adaptive vibration suppression control consists of the following two functions.

- Adaptive filter II
- Vibration tough drive

At the initial setting, the adaptive filter II operates automatically and the machine resonance suppression filter is automatically estimated. After that, the vibration tough drive function measures the machine resonance variation and resets the setting value of the machine resonance suppression filter.

When the machine vibration does not stop after the vibration tough drive function resets the filter, readjust the setting with the adaptive filter II.

### (b) Adaptive filter II

POINT
<ul style="list-style-type: none"> <li>● The machine resonance frequency which adaptive filter II (adaptive tuning) can respond to is about 100 Hz to 2.25 kHz. As for the resonance frequency out of the range, set manually.</li> <li>● When adaptive tuning is executed, vibration sound increases as an excitation signal is forcibly applied for several seconds.</li> <li>● When adaptive tuning is executed, machine resonance is detected for a maximum of 10 s and a filter is generated. After filter generation, the adaptive tuning mode automatically shifts to the manual setting.</li> <li>● Adaptive tuning generates the optimum filter with the currently set control gains.</li> <li>● Adaptive vibration suppression control may provide no effect on a mechanical system which has complex resonance characteristics.</li> <li>● This adaptive filter II (adaptive tuning mode) is different from the function of MR-J2S-_B_ and equivalent to that of MR-J4-_B_. Tuning accuracy can be set only in standard mode.</li> </ul>

### 1) Operation

Adaptive filter II (adaptive tuning) is a function in which the servo amplifier detects machine resonance for a predetermined period of time and sets the filter characteristics automatically to suppress mechanical system vibration. Since the filter characteristics (frequency, depth) are set automatically, you need not be conscious of the resonance frequency of a mechanical system.

When machine resonance is large and frequency is low

When machine resonance is small and frequency is high

(c) Vibration tough drive function

POINT
<ul style="list-style-type: none"><li>● Resetting the machine resonance frequency by the vibration tough drive function is performed constantly. However, the number of write times to the EEP-ROM is limited to once per hour.</li><li>● The vibration tough drive function does not detect a vibration of 100 Hz or less.</li><li>● When the machine resonance does not stop after the vibration tough drive function resets the machine resonance frequency, perform the adaptive tuning again.</li></ul>

This function prevents vibration by resetting a filter instantaneously when machine resonance occurs due to varied vibration frequency caused by equipment aging.

The vibration tough drive function operates when a detected machine resonance frequency is within  $\pm 30\%$  for the machine resonance frequency estimated by the adaptive filter II function.

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

## (d) Parameter

POINT
<ul style="list-style-type: none"> <li>● As the initial value, "Adaptive vibration suppression control selection" is set to "Disabled (_ 0 _)" in [Pr. 25].</li> <li>● When "Adaptive vibration suppression control selection" is set to "Enabled (_ 1 _)" in [Pr. 25] during servo-off, the adaptive filter II is executed after servo-on.</li> <li>● When "Adaptive vibration suppression control selection" is set to "Enabled (_ 1 _)" in [Pr. 25], the machine resonance frequency is reset by the vibration tough drive function. When the machine resonance does not stop after the resetting, execute the adaptive filter II again.</li> <li>● Before replacing a servo amplifier which uses this function with other equipment, set "Adaptive vibration suppression control selection" to "Disabled (_ 0 _)" in [Pr. 25] and clear the filter properties of the adaptive filter II.</li> </ul>

The following shows the related parameters of the adaptive vibration suppression control function of MR-J4\_B\_-RJ020.

For others, refer to "MELSERVO-J4 series MR-J4\_B\_-RJ020 MR-J4-T20 Servo Amplifier Instruction Manual".

## 10. Alarm

### 10.1 Alarm/Warning List

When an error occurs during operation, an alarm or a warning is displayed. When an alarm or a warning occurs, take the proper action as described in the "MR-J4-\_B\_RJ020/MR-J4-T20 Servo Amplifier Instruction Manual".

After removing the cause of the alarm, the alarm can be canceled using any of the methods marked with ○ in the alarm reset column in the table below. (The shaded parts indicate the differences.)

	Number	Name	Stop method (Note 6)	Reset alarm		
				Power-off to power-on	Reset an error	Reset the CPU
Alarm	10	Undervoltage	EDB	○	○	○
	12. (Note 5)	Memory error 1	DB	○	○	○
	13	Clock error	DB	○	○	○
	15	Memory error 2	DB	○	○	○
	16	Encoder error 1	DB	○	○	○
	17	Board error	DB	○	○	○
	19.	Memory error 3	DB	○	○	○
	1A	Motor combination error	DB	○	○	○
	20	Encoder error 2	EDB	○	○	○
	24	Main circuit error	DB	○	○	○
	25	Loss of absolute position	DB	○ (Note 2)	○	○
	30	Regenerative error	DB	○ (Note 1)	○ (Note 1)	○ (Note 1)
	31	Overspeed	EDB	○	○	○
	32	Overcurrent	DB	○	○ (Note 4)	○ (Note 4)
	33	Overvoltage	EDB	○	○	○
	34	CRC error	EDB	○	○	○
	35	Command frequency error	EDB	○	○	○
	36	Transfer error	EDB	○	○	○
	37	Parameter error	DB	○	○	○ (Note 4)
	3E. 2	Mode change error	DB	○	○	○ (Note 3)
	45	Main circuit element overheat	EDB	○ (Note 1)	○ (Note 1, 4)	○ (Note 1, 4)
	46	Servo motor overheat	DB	○ (Note 1)	○ (Note 1)	○ (Note 1)
	50	Overload 1	EDB	○ (Note 1)	○ (Note 1)	○ (Note 1)
	51	Overload 2	DB	○ (Note 1)	○ (Note 1)	○ (Note 1)
	52	Error excessive	EDB	○	○	○
	8E	Serial communication error	EDB	○	○	○
	888	Watchdog	DB	○	○	○
Warning	92	Battery disconnection warning		Warnings are automatically canceled when the cause is removed.		
	96	Home position setting error warning				
	9F	Battery warning				
	E0	Excessive regeneration alarm				
	E1	Overload alarm				
	E3	Absolute position counter alarm				
	E4	Parameter alarm				
	E6	Servo forced stop warning	EDB (Note 7)			
	E7	Controller emergency stop warning	EDB			
	E9	Main circuit off warning	DB			
EE	SSCNET error warning					

- Note
1. After the cause of the alarm is removed, leave it to cool for about 30 minutes.
  2. To confirm connection to the servo system controller, the alarm may not be reset if the power is not turned on twice or more.
  3. It is only reset when mode is set correctly.
  4. Alarm factors may not be removed depending on the cause of the alarm.
  5. Numerical figures after a decimal point may not be displayed.
  6. There are two stop methods of DB and EDB.

DB: Stop with a dynamic brake

EDB: Stop with an electronic dynamic brake (Only available for the specific servo motor)

Refer to the following table for specific servo motors. The stop method other than the specific servo motor is DB.

Series	Servo motor
HG-KR	HG-KR053/HG-KR13/HG-KR23/HG-KR43
HG-MR	HG-MR053/HG-MR13/HG-MR23/HG-MR43
HG-SR	HG-SR51/HG-SR52

7. When STO1 or STO2 is turned off (the CN8 short-circuit connector is disconnected), the stop method is DB.

Display	Name	Description	Cause	Action
3E.2	Mode change error	The operating mode setting does not match the actual operating mode.	Switched on with the MR-J4-T20 removed.	<ol style="list-style-type: none"> <li>1. Connect the MR-J4-T20 and restart the servo amplifier.</li> <li>2. With the application of "MR-J4(W)-B Change mode" supplied with the MR Configurator2, change to "J2S Compatibility Mode".</li> </ol>

## 11. DIMENSIONS

### 11.1 Comparison of Dimensions

The following table shows the combined dimensions of the servo amplifier and options.

(1) shows the amount of increased unit width compared with MR-J2S-\_B\_. For the sections of the table showing "None", the unit's width is smaller compared with MR-J2S. No interference occurs as the installation intervals for all units do not exceed 10 mm.

(2) shows permissible installation intervals for units whose width increases. Even when using the conversion unit, it is recommended to keep the interval between the units 10 mm or more.

Dimensions

Unit MR-J4-_-RJ020	MR-J4-_B_-RJ020 MR-J4-T20 combined dimensions width × height × length	MR-J2S-_B_ width × height × length	(1) Unit width increase	(2) Permissible installation interval (Note 1)	Mounting hole Compatibility (Note 3)
10B/20B	52 × 168 × 135	50 × 168 × 135	2 mm (Note 2)	8 mm	○
40B/60B	52 × 168 × 170	70 × 168 × 135	None		○
70B/100B	72 × 168 × 185	70 × 168 × 190	2 mm (Note 2)	8 mm	△
200B/350B	97 × 168 × 195	90 × 168 × 195	7 mm (Note 2)	3 mm	△
500B	107 × 250 × 200	130 × 250 × 200	None		△
700B	174 × 300 × 200	180 × 350 × 200	None		△
11KB/15KB	220 × 400 × 260	260 × 400 × 260	None		△
22KB	260 × 400 × 260	350 × 400 × 260	None		△
DU30KB/DU37KB	300 × 380 × 300	450 × 500 × 300	(Note 4)	(Note 4)	△
60B4/100B4	72 × 168 × 195	90 × 168 × 195	None		△
200B4	97 × 168 × 195	90 × 168 × 195	7 mm (Note 2)	3 mm	△
350B4	107 × 250 × 200	130 × 250 × 200	None		△
500B4	132 × 250 × 200	130 × 250 × 200	2 mm (Note 2)	8 mm	△
700B4	174 × 300 × 200	180 × 350 × 200	None		△
11KB4/15KB4	220 × 400 × 260	260 × 400 × 260	None		△
22KB4	260 × 400 × 260	350 × 400 × 260	None		△
DU30KB4	240 × 380 × 300	380 × 500 × 300	(Note 4)	(Note 4)	△
DU37KB4	240 × 380 × 300	450 × 500 × 300	(Note 4)	(Note 4)	△
DU45KB4/DU55KB4	300 × 380 × 300	450 × 500 × 300	(Note 4)	(Note 4)	△

- Note 1. These are the installation intervals on the right side. All backslash areas are 10 mm or more, as in MR-J4.
- Note 2. Though the unit itself is wider than MR-J2S, it poses no problem because it fits within the 10 mm installation interval.
- Note 3. "△" indicates that the mounting holes are different.
- Note 4. Replacement of large capacity of 30 kW or more requires change of the converter unit.  
For comparison of dimensions, refer to "1.4 Installation" in "Part 5: Review on Replacement of MR-J2S-30 kW or more with MR-J4-\_DU\_".

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

## 11.2 Dimensions

These are external views when 100 W, 3.5 kW, and 5 kW servo amplifiers are combined with MR-J4-T20. The views from the bottom show the increases in width from that of the MR-J4 standard model. (For dimensions when the servo amplifier in different capacities is combined with the MR-J4-T20, refer to "[Appendix 1] 11.2.3 Dimensions (MR-J4-\_B\_-RJ020 + MR-J4-T20)".

12. MODE SWITCHING METHOD

POINT		
<p>● There are function limits for the MRJ4-_B servo amplifier when using the MRJ4-_B_-RJ020 servo amplifier in J4 mode. Regarding other functions, they are the same as for the MRJ4-_B servo amplifier.</p>		
Function	Availability	
	MR-J4-_B_	MR-J4-_B_-RJ020
CN2L connector	None	Yes (Not compatible)
Linear servo system	Compatible	Not compatible
Direct drive servo system	Compatible	Not compatible
Fully closed loop system	Compatible	Not compatible

12.1 Mode Switching Method from J2S Compatibility Mode to J4 Mode

- (1) Turn on the servo amplifier with the MR-J4-T20 removed.
- (2) Run the application of "MR-J4(W)-B Change mode" or "MR Mode Change" and verify that "J2S Compatibility Mode" is not displayed in "Compatibility Mode". If displayed, try again from (1) of this section.
- (3) Select "Change the mode" and then choose "J4 mode". Do not choose any control mode other than "Standard control mode" for the "Operation Mode".

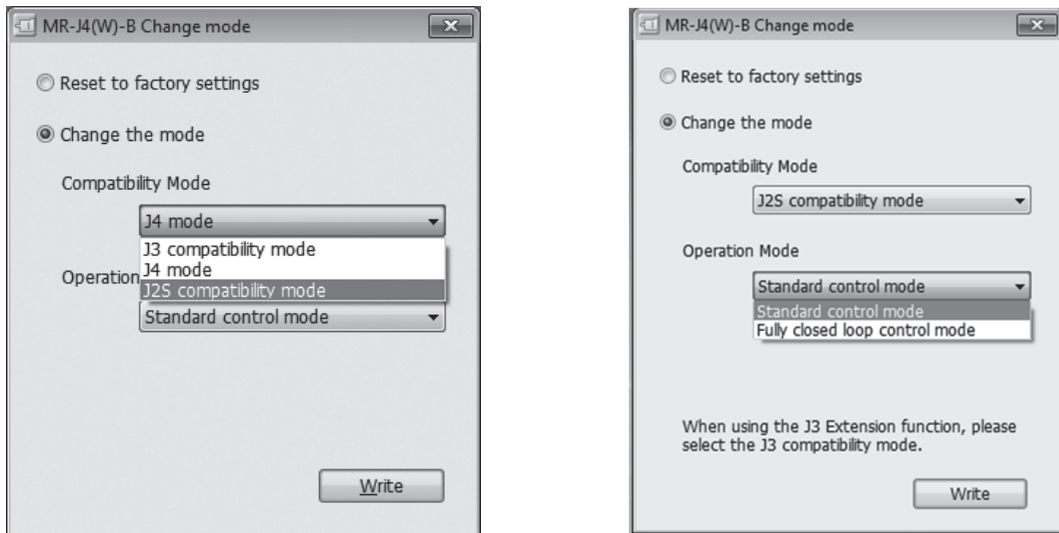

- (4) Click the "Write (W)" button.
- (5) By cycling the power supply of the servo amplifier, the mode will switch to J4 mode.

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

### 12.2 Mode Switching Method from J4 Mode to J2S Compatibility Mode

- (1) Turn on the servo amplifier with MR-J4-T20 mounted.
- (2) Run the application of "MR-J4(W)-B Change mode" or "MR Mode Change" and verify that "J2S Compatibility mode" is displayed in "Compatibility Mode". If not, try again from (1) of this section.
- (3) Select "Switch mode" and then choose "J2S compatibility mode". Only standard control mode can be selected for the operation mode.

- (4) Click the "Write" button.
- (5) By cycling the power supply of the servo amplifier, the mode will switch to J2S compatibility mode.

#### POINT

- For the details of the parameters, refer to "MR-J4-\_B\_-RJ020 Servo Amplifier Instruction Manual (SH(NA)030125)".

13. OPTIONS AND PERIPHERAL EQUIPMENT

**WARNING** ● Before connecting options or peripheral equipment, turn off the power and wait for 15 minutes or more until the charge lamp turns off. Then, confirm that the voltage between P+ and N- is safe with a voltage tester and others. Otherwise, an electric shock may occur. In addition, when confirming whether the charge lamp is off or not, always check from the front of the servo amplifier.

**CAUTION** ● Do not use peripheral equipment or options other than those specified in this document as a malfunction and fire could result.

This chapter only describes the encode cable and regenerative option for connecting the HC-\_FS series and the HA-\_FS series servo motor to the MR-J4-\_B\_-RJ020 servo amplifier. For details of the options for the servo amplifier, refer to Chapter 11 of the "MR-J4-\_B\_-RJ020 MR-J4-T20 Servo Amplifier Instruction Manual". For options for the HC-\_FS series and the HA-\_FS series servo motors, refer to "MR-J2S-\_B Servo Amplifier Instruction Manual (SH(NA)030007)" and "MELSERVO Servo Motor Instruction Manual (SH(NA)3181)".

**POINT**

● Protection grades shown on the cable and the connector indicate dust and waterproof level when the connector and the cable are installed on the servo motor. If protection grades of the cable, the connector and the servo motor are different, all the protection grades are dependent on the lower grades.

For the cable and the connector used for this servo, purchase options described in this section.

13.1 Encoder Cable Combination

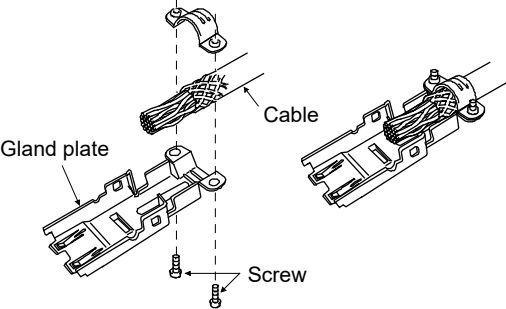

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

## 13.2 Encoder Cable List

No.	Product name	Model	Description	Application
1)	Encoder cable	MR-EKCBL_M-L Cable length: 20, 30 m	 For details, refer to section 13.3 (1).	IP20
2)	Encoder cable	MR-EKCBL_M-H Cable length: 20, 30, 40, 50 m		IP20 Long bending life
3)	Encoder cable	MR-J3CH00 Cable length: 0.2 m	 For details, refer to section 13.3 (2).	IP20
4)	Encoder cable	MR-JCCBL_M-L Cable length: 2, 5, 10, 20, 30 m	Connector: 10120-3000PE      Housing: 1-172161-9 Shell kit: 10320-52F0-008      Connector pin: 170359-1 (3M or equivalent)      (Tyco electronics or equivalent) Cable clamp: MTI-0002 (TOA ELECTRIC INDUSTRIAL CO., LTD.)	IP20
5)	Encoder cable	MR-JCCBL_M-H Cable length: 2, 5, 10, 20, 30, 40, 50 m		IP20 Long bending life
6)	Encoder cable	MR-ESCBL_M-L Cable length: 2, 5, 10, 20, 30 m	 For details, refer to section 13.3 (3).	IP20
7)	Encoder cable	MR-ESCBL_M-H Cable length: 2, 5, 10, 20, 30, 40, 50 m		IP20 Long bending life
8)	Encoder cable	MR-JHSCBL_M-L Cable length: 2, 5, 10, 20, 30 m	Connector: 10120-3000PE      Plug: D/MS3106B20-29S Shell kit: 10320-52F0-008      Cable clamp: D/MS3057-12A (3M or equivalent)      (DDK Ltd.)	IP20
9)	Encoder cable	MR-JHSCBL_M-H Cable length: 2, 5, 10, 20, 30, 40, 50 m		IP20 Long bending life
10)	Encoder cable	MR-ENCBL_M-H Cable length: 2, 5, 10, 20, 30, 40, 50 m	Connector: 10120-3000PE      Plug: D/MS3106A20-29S(D190) Shell kit: 10320-52F0-008      Cable clamp: CE3057-12A-3-D (3M or equivalent)      Back shell: CE02-20BS-S-D (DDK Ltd.)	IP65 Long bending life

13.3 Details on encoder cable

POINT
<p>● To wire the connector on the CN2 side, securely connect the external conductor of the shield cable to the gland plate and install it to the connector shell.</p>

<p>● The following encoder cables are a four wire system.</p> <p>MR-EKCBL30M-L  MR-EKCBL30M-H  MR-EKCBL40M-H  MR-EKCBL50M-H  MR-ESCBL30M-L  MR-ESCBL30M-H  MR-ESCBL40M-H  MR-ESCBL50M-H</p> <p>When using these encoder cables, set [Pr. 23] to "_ 1 _" and select "four wires system".</p> <p>Incorrect setting will cause [AL.16 Encoder Error 1].</p>

(1) MR-EKCBL\_M-\_\_

These cables are encoder cables for the HC-KFS, HC-MFS and HC-UFS 3000 r/min servo motors. The numbers in the cable length field of the table indicate the symbol filling the underline "\_" in the cable model. The cables of the lengths with the symbols are available.

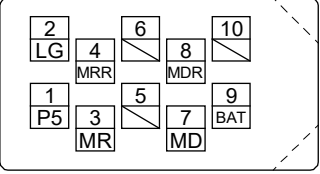

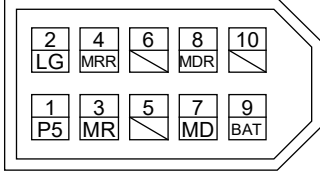

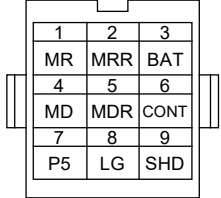

Cable model	Cable length				Protection degree	Bending life	Application
	20 m	30 m	40 m	50 m			
MR-EKCBL_M-L	20	(Note) 30			IP20	Standard	For the HC-KFS, HC-MFS and HC-UFS 3000 r/min servo motors
MR-EKCBL_M-H	20	(Note) 30	(Note) 40	(Note) 50	IP20	Long bending life	

Note. Four wire system cable

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

## (a) Servo amplifier/servo motor connection

Cable model	1) CN2 connector	2) Encoder connector
MR-EKCBL_M-L	Receptacle: 36210-0100PL Shell kit: 36310-3200-008 (3M)  View seen from wiring side. (Note)	Connector set: 54599-1019 (Molex) Housing: 1-172161-9 Connector pin: 170359-1 Crimping tool: 91529-1 (Tyco electronics or equivalent) Cable clamp: MTI-0002 (TOA ELECTRIC INDUSTRIAL CO., LTD.)  View seen from wiring side. (Note)
MR-EKCBL_M-H	Note Do not connect anything to the pins shown as  . Especially 10 pin is for manufacturer adjustment. Connection to other pins will cause the servo amplifier to operate abnormally.	 View seen from wiring side.

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

## (b) Cable internal wiring diagram

Note. When using the absolute position detection system, make sure to connect. When using the incremental system, it is not necessary to wire.

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

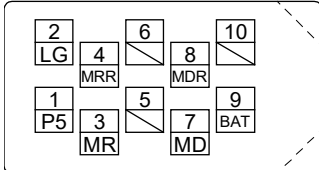

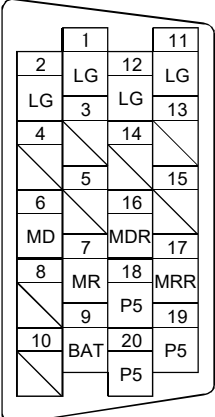

(2) MR-J3CH00 (or SC-J2SJ4ENC03M (manufactured by Mitsubishi Electric System & Service Co., Ltd.))  
 The servo amplifier and the servo motor cannot be connect only using this cable. Use it with following encoder cable.

- MR-JCCBL\_M-L
- MR-JCCBL\_M-H
- MR-JHSCBL\_M-L
- MR-JHSCBL\_M-H
- MR-ENCBL\_M-H

Cable model	Cable length	Protection degree	Bending life	Application
MR-J3CH00	0.2 m	IP20	Standard	For the HC-KFS, HC-MFS series and HC-UFS 3000 r/min servo motors Use with the MR-JCCBL_M-L/H.
				For the HC-SFS, HC-RFS, HC-LFS, HA-LFS series and HC-UFS 2000 r/min servo motors Use with the MR-JHCBL_M-L/H or MR-ENCBL_M-H.

(a) Servo amplifier/servo motor connection

Cable model	1) CN2 connector	2) Relay connector
MR-J3CH00	Receptacle: 36210-0100PL Shell kit: 36310-3200-008 (3M)  View seen from wiring side. (Note)	Connector set: 54599-1019 (Molex) or  View seen from wiring side. (Note)
	Note. Do not connect anything to the pins shown as  Especially 10 pin is for manufacturer adjustment. Connection to other pins will cause the servo amplifier to operate abnormally.	Connector: 10220-0200EL Shell kit: 10320-E2W0-008 (3M)  View seen from wiring side. (Note)
		Note. Do not connect anything to the pins shown as  .

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

(b) Cable internal wiring diagram

Note. When using the absolute position detection system, make sure to connect. When using the incremental system, it is not necessary to wire.

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

## (3) MR-ESCBL\_M-

These cables are encoder cables for the HC-SFS, HC-RFS, HC-LFS, HA-LFS series and the 2000 r/min servo motors. The numbers in the cable length field of the table indicate the symbol filling the underline "\_" in the cable model. The cables of the lengths with the symbols are available.

Cable model	Cable length							Protection degree	Bending life	Application
	2 m	5 m	10 m	20 m	30 m	40 m	50 m			
MR-ESCBL_M-L	2	5	10	20	(Note) 30			IP20	Standard	For the HC-SFS, HC-RFS, HC-LFS, HA-LFS series and HC-UFS 2000 r/min servo motors
MR-ESCBL_M-H	2	5	10	20	(Note) 30	(Note) 40	(Note) 50	IP20	Long bending life	

Note. Four wire cable

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

## (b) Cable internal wiring diagram

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

Note. When using the absolute position detection system, make sure to connect. When using the incremental system, it is not necessary to wire.

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

### 13.4 Large Capacity Servo Cable Connector Set

#### 13.4.1 Cable connector set combination

When using the MR-J4-DU\_B\_-RJ020, cables and connector sets other than those shown below are the same as the MR-J4-(-RJ). Refer to Section 11.1 in "MR-J4-(-RJ) Servo Amplifier Instruction Manual".

No.	Product name	Model	Description		Application
1)	Protection coordination cable	MR-J3CDL05M (Refer to Section 13.4.2.)	Connector: 10120-3000PE Shell kit: 10320-52F0-008 (3M or equivalent)	Connector: PCR-S20FS+ Case: PCR-LS20LA1 (HONDA TSUSHIN KOGYO CO., LTD.)	
2)	Connector set	MR-J2CN1-A (Refer to section 13.4.2.)	Connector: 10120-3000PE Shell kit: 10320-52F0-008 (3M or equivalent)	Connector: PCR-S20FS+ Shell kit: PCR-LS20LA1 (HONDA TSUSHIN KOGYO CO., LTD.)	
3)	Electromagnetic contactor wiring connector		Connector on the converter unit (Phoenix Contact) Socket: GFKC 2,5/ 2-STF-7,62		Supplied with the converter unit.
4)	Digital input/output connector		Connector on the converter unit (DDK Ltd.) Connector: 17JE23090-02(D8A)K11-CG		

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

### 13.4.2 MR-J3CDL05M (0.5 m) Protection Coordination Cable

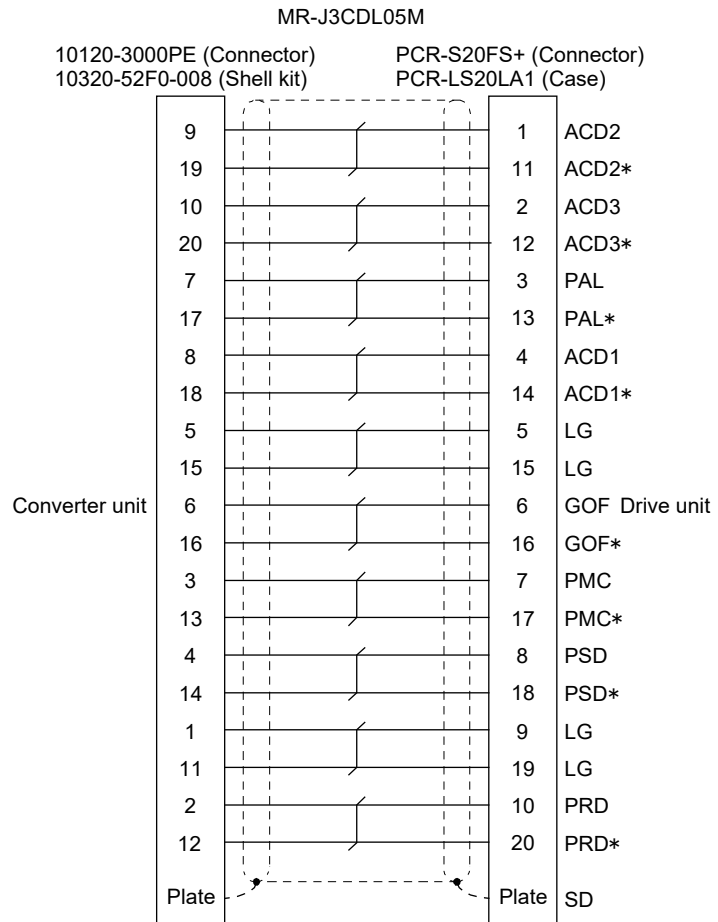

#### Note

●When manufacturing a protection coordination cable, be careful not to wire improperly. Otherwise, it may cause unexpected motion.

This cable is intended to connect the converter unit and the drive unit.

#### (1) Internal wiring diagram

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

## 13.5 Regenerative Options

**Note**

● Regenerative options and servo amplifier must not be set in combination other than the specified combination.  
Doing so could cause a fire.

### 13.5.1 Combination and regenerative power

(1) 200/100 V class

(a) When using the HA-\_FS/HC-\_FS motors (J2S compatibility mode)

List of regenerative options

Servo amplifier model	Built-in regenerative resistor [W]	Permissible regenerative power of regenerative option [W] MR-RB

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

## 13.5.2 Regenerative option selection

Select by the following method when regeneration is continuously generated on the vertical axis or when a regenerative option is selected in detail.

### (1) Calculation of regenerative energy

Formula to calculate torque and energy during operation

Regenerative power	Torque T [N·m] imposed on servo motor	Energy E [J]
1)	$T_1 = \frac{(J_L/\eta + J_M) \cdot V}{9.55 \cdot 10^4} \cdot \frac{1}{t_{psa1}} + T_U + T_F$	$E_1 = \frac{0.1047}{2} \cdot V \cdot T_1 \cdot t_{psa1}$
2)	$T_2 = T_U + T_F$	$E_2 = 0.1047 \cdot V \cdot T_2 \cdot t_1$
3)	$T_3 = \frac{-(J_L \cdot \eta + J_M) \cdot V}{9.55 \cdot 10^4} \cdot \frac{1}{t_{psa2}} + T_U + T_F$	$E_3 = \frac{0.1047}{2} \cdot V \cdot T_3 \cdot t_{psa2}$
4), 8)	$T_4, T_8 = T_U$	$E_4, E_8 \geq 0$ (no regeneration)
5)	$T_5 = \frac{(J_L/\eta + J_M) \cdot V}{9.55 \cdot 10^4} \cdot \frac{1}{t_{psd2}} - T_U + T_F$	$E_5 = \frac{0.1047}{2} \cdot V \cdot T_5 \cdot t_{psd2}$
6)	$T_6 = -T_U + T_F$	$E_6 = 0.1047 \cdot V \cdot T_6 \cdot t_3$
7)	$T_7 = \frac{-(J_L \cdot \eta + J_M) \cdot V}{9.55 \cdot 10^4} \cdot \frac{1}{t_{psd2}} - T_U + T_F$	$E_7 = \frac{0.1047}{2} \cdot V \cdot T_7 \cdot t_{psd2}$

Determine the absolute value (Es) of the total sum of negative energy from the calculation results 1) to 8).

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

### (2) Loss of the servo motor and the servo amplifier during regeneration

The efficiency of the servo motor and the servo amplifier during regeneration is shown below.

Servo amplifier	Motor inverse efficiency [%]	C charge [J]
MR-J4-10B-RJ020	55	9
MR-J4-20B-RJ020	70	9
MR-J4-40B-RJ020	85	11
MR-J4-60B-RJ020	85	11
MR-J4-70B-RJ020	80	18
MR-J4-100B-RJ020	80	18
MR-J4-200B-RJ020	85	36
MR-J4-350B-RJ020	85	40
MR-J4-500B-RJ020	90	45
MR-J4-700B-RJ020	90	70
MR-J4-11KB-RJ020	90	120
MR-J4-15KB-RJ020	90	170
MR-J4-22KB-RJ020	90	250

Servo amplifier	Motor inverse efficiency [%]	C charge [J]
MR-J4-60B4-RJ020	85	12
MR-J4-100B4-RJ020	80	12
MR-J4-200B4-RJ020	85	25
MR-J4-350B4-RJ020	85	43
MR-J4-500B4-RJ020	90	45
MR-J4-700B4-RJ020	90	70
MR-J4-11KB4-RJ020	90	120
MR-J4-15KB4-RJ020	90	170
MR-J4-22KB4-RJ020	90	250
MR-J4-10B1-RJ020	55	4
MR-J4-20B1-RJ020	75	4
MR-J4-40B1-RJ020	85	10

Converter unit	Drive unit	Motor inverse efficiency [%]	C charge [J]
MR-CR55K	MR-J4-DU30KB-RJ020	90	450
	MR-J4-DU37KB-RJ020	90	450
MR-CR55K-4	MR-J4-DU30KB4-RJ020	90	450
	MR-J4-DU37KB4-RJ020	90	450
	MR-J4-DU45KB4-RJ020	90	450
	MR-J4-DU55KB4-RJ020	90	450

Inverse efficiency ( $\eta$ ): Efficiency including part of the servo motor and the servo amplifier when generating the rated (regenerative) torque at the rated rotation speed. Provide a greater allowance by about 10% as the efficiency varies depending on the rotation speed or generating torque.

C charge ( $E_c$ ): Energy which charges the electrolytic capacitor within the servo amplifier.

Energy consumed by the regenerative option can be calculated from the value of the total of regenerative energy multiplied by inverse efficiency from which C charge is subtracted.

$$ER [J] = \eta \cdot E_s - E_c$$

For energy consumption of regenerative option, select the desired option by calculating based on one operating cycle  $t_h$  [s].

$$PR [W] = ER/t_f$$

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

## 13.5.3 Parameter setting

[Setting for 22 kW or less]

Set [Pr. 2] adjusting to the regenerative option to be used.

[Pr. 2]

0	0		
---	---	--	--

- 00: The regenerative option is not used
  - For servo amplifier of 100W, regenerative resistor is not used.
  - For servo amplifier of 0.2 kW to 7 kW, built-in regenerative resistor is used.
  - The supplied regenerative resistor or regenerative option is used in the servo amplifier at 11 kW to 22 kW.
- 01: FR-RC/FR-RC-H/FR-CV/FR-CV-H/FR-BU2/FR-BU2-H
- 05: MR-RB32
- 08: MR-RB30
- 09: MR-RB50 (Cooling fan is needed)
- 0B: MR-RB31
- 0C: MR-RB51 (Cooling fan is needed)
- 0E: When increasing the capabilities by using a cooling fan to cool the supplied regeneration resistor with the servo amplifier of 11 kW to 22 kW.
- 10: MR-RB032
- 11: MR-RB12
- 13: MR-RB5E
- 14: MR-RB5E (Cooling fan is needed)

- 9D: MR-RB5U-4 (Cooling fan is needed)

[Setting for 30 kW or more]

POINT
● Regenerative options cannot be connected to the drive unit. [Pr. PA02] in the drive unit must be set to "__ 0 0" (do not use regenerative options) or "__ 01". Setting other than the above will cause [AL. 37 Parameter error].

Set [Pr. PA01] for the converter unit, adjusting to the regenerative option to be used.

[Pr. PA01]

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

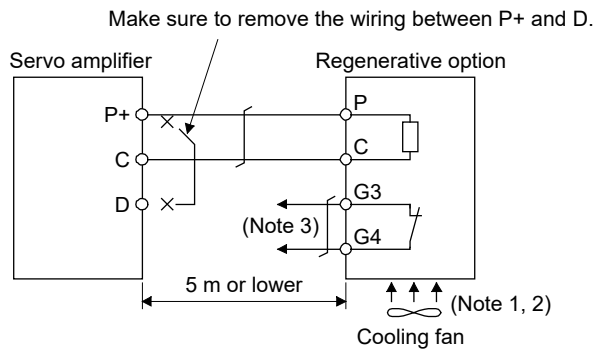

## 13.5.4 Connecting regenerative options

POINT
<ul style="list-style-type: none"> <li>● When using MR-RB50, MR-RB51, MR-RB3M-4, MR-RB3G-4, MR-RB5G-4, MR-RB34-4, MR-RB54-4, MR-RB3H-4 and MR-RB5H-4, cooling using the cooling fan is required. You should provide the cooling fan.</li> <li>● Refer to Chapter 7 of this document for wire sizes used for wiring.</li> </ul>

Regenerative options may be heated to 100 °C or more above the ambient temperature. Carefully determine the position of the radiation, installation position, wiring path, etc. Use flame-retardant wire for wiring or apply flame retardant treatment by avoiding contact between the wires and the regenerative option. Be sure to use twisted wires when connecting to the servo amplifier and keep the wiring distance to no longer than 5 m.

### (1) MR-J4-500B-RJ020 or less / MR-J4-350B4-RJ020 or less

Be sure to remove wiring between P+ and D and then install the regenerative option between P+ and C. The G3 and the G4 terminals are thermal sensors. Abnormal overheating of the regenerative option causes the contact between G3 and G4 to open.

- Note 1. When using MR-RB50, MR-RB3M-4, MR-RB3G-4, MR-RB5G-4, MR-RB3H-4 and MR-RB5H-4, perform forced cooling using the cooling fan (1.0 m<sup>3</sup>/min or more, 92 mm square).
- Note 2. Provide forced cooling for MR-RB30, MR-RB31 and MR-RB32 using the cooling fan (1.0 m<sup>3</sup>/min or more, 92 mm square) when the ambient temperature of the regenerative option is 55 °C and regenerative load ratio exceeds 60%. When the ambient temperature is at or below 35 °C, the cooling fan is not required. (In the figure below, it is necessary to cool with the cooling fan required when the ambient temperature and load ratio are within the shaded area.)

3. Configure sequence of shutting off the electromagnetic contactor when abnormal heating is caused.

Specifications for contact between G3 and G4:

- Maximum voltage: 120 V AC/DC
- Maximum current: 0.5 A/4.8 V DC
- Maximum capacity: 2.4 VA

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

## (2) MR-J4-700B-RJ020/MR-J4-500B4-RJ020/MR-J4-700B4-RJ020

Remove the wiring (between P+ and C) for the regenerative resistor built into the servo amplifier and install the regenerative option between P+ and C. The G3 and the G4 terminals are thermal sensors. Abnormal overheating of the regenerative option causes the contact between G3 and G4 to open.

- Note 1. When using MR-RB51, MR-RB34-4, MR-RB54-4, MR-RB3G-4 and MR-RB5G-4, perform forced cooling using the cooling fan (1.0 m<sup>3</sup>/min or more, 92 mm square).
2. Configure sequence of shutting off the electromagnetic contactor when abnormal heating is caused.

Specifications for contacts between G3 and G4

Maximum voltage: 120 V AC/DC

Maximum current: 0.5 A/4.8 V DC

Maximum capacity: 2.4 VA

When you use the regenerative option, remove the wiring (between P+ and C) for the regenerative resistor built into the servo amplifier, place back to back as shown in the diagram below and secure to the frame using the supplied screw.

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

- (3) MR-J4-11KB-RJ020 to MR-J4-22KB-RJ020 and MR-J4-11KB4-RJ020 to MR-J4-22KB4-RJ020 (when the regenerative resistor that comes standard with the servo amplifier is used.)

### Note

- Since the regenerative resistor that comes with the servo amplifier of 11 kW to 22 kW has no protective cover, be careful of the following items.
  - The surface of the part is a resistor and it becomes very hot. Touching it could cause burns.
  - The capacitor of the servo amplifier is charged for a while even after power is disconnected. Touching it may cause electric shock.

When you use regenerative resistors that come standard with the servo amplifier, be sure to connect the specified number (4 or 5 pcs.) in series. Parallel connection or use of regenerative resistors less than the specified number could failure of the servo amplifier and/or burnout of regenerative resistors.

When regenerative resistors are installed side-by-side, keep a distance of 70 mm or more between resistors. Cooling the resistors with cooling fans (1.0 m<sup>3</sup>/min or more, 92 mm square x 2 pcs.) enhances regenerative power. In this case, set [Pr. 2] to " \_\_ 0 E".

Note. The number of series connections varies depending on the type of resistors. Thermal sensors are not built into the supplied regenerative resistors. In the case of a failure of the regenerative circuit, the possible cause is abnormal overheating of resistors. Therefore, you should install thermal sensors near resistors and install the protection circuit that shuts off the main circuit power in the case of abnormal overheating. The detection level of the thermal sensor varies depending on the method used for installing resistors. Install thermal sensors in optimal locations according to your design standard or use regenerative options with built-in thermal sensors (MR-RB5E, MR-RB5R, MR-RB9P, MR-RB9F, MR-RB9T, MR-RB5K-4, MR-RB6B-4, MR-RB60-4 or MR-RB6K-4) .

Servo amplifier	Regenerative resistor	Regenerative power [W]		Resistance value [Ω]	Number
		During normal use	During cooling		
MR-J4-11KB-RJ020	GRZG400-0.8Ω	500	800	3.2	4
MR-J4-15KB-RJ020	GRZG400-0.6Ω	850	1300	3	5
MR-J4-22KB-RJ020	GRZG400-0.5Ω			2.5	
MR-J4-11KB4-RJ020	GRZG400-2.5Ω	500	800	10	4
MR-J4-15KB4-RJ020	GRZG400-2Ω	850	1300	10	5
MR-J4-22KB4-RJ020					

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

(4) MR-J4-11KB-RZ020 to MR-J4-22KB-RZ020 and MR-J4-11KB4-RZ020 to MR-J4-22KB4-RZ020 (when regenerative options are used.)

MR-J4-11KB-RZ020 to MR-J4-22KB-RZ020 and MR-J4-11KB4-RZ020 to MR-J4-22KB4-RZ020 do not come with regenerative resistors. When you use these servo amplifiers, be sure to use MR-RB5E, MR-RB5R, MR-RB9P, MR-RB9F, MR-RB9T, MR-RB5K-4, MR-RB6B-4, MR-RB60-4 or MR-RB6K-4.

Cooling with a cooling fan enhances regenerative power. The G3 and the G4 terminals are thermal sensors. Abnormal overheating of the regenerative option causes the contact between G3 and G4 to open.

When the thermal sensor is activated, configure to shut off the main circuit power.

Note. Specifications for contacts between G3 and G4

- Maximum voltage: 120 V AC/DC
- Maximum current: 0.5 A/4.8 V DC
- Maximum capacity: 2.4 VA

Servo amplifier	Regenerative options	Resistance value [Ω]	Regenerative power [W]	
			Without cooling fan	With cooling fan
MR-J4-11KB-RZ020	MR-RB5E	6	500	800
	MR-RB5R	3.2		
MR-J4-15KB-RZ020	MR-RB9P	4.5	850	1300
	MR-RB9F	3		
MR-J4-22KB-RZ020	MR-RB9T	2.5	850	1300
MR-J4-11KB4-RZ020	MR-RB5K-4	10	500	800
	MR-RB6B-4	20		
MR-J4-15KB4-RZ020	MR-RB60-4	12.5	850	1300
MR-J4-22KB4-RZ020	MR-RB6K-4	10		

When you use a cooling fan, install it in the mounting hole at the bottom of the regenerative option.

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

### (5) MR-CR55K\_(when regenerative options are used)

Make sure to supply power (shown in the following table) to the cooling fan.

Table: Appendix 1 Cooling Fan

Item	200 V class	400 V class
Model	MR-RB137/MR-RB139	MR-RB137-4/MR-RB13V-4
Voltage/Frequency	1-phase 198 V AC to 242 V AC, 50 Hz/60 Hz	1-phase 380 V AC to 480 V AC, 50 Hz/60 Hz
Consumed power [W]	20 (50 Hz)/18 (60 Hz)	20 (50 Hz)/18 (60 Hz)

Regenerative options may be heated to 100 °C or more above the ambient temperature. Carefully determine the position of the radiation, installation position, wiring path, etc. Use flame-retardant wire for wiring or apply flame retardant treatment by avoiding contact between the wires and the regenerative option. The G3 and the G4 terminals are thermal protectors. Abnormal overheating of the regenerative option causes the contact between G3 and G4 to open.

Be sure to use twisted wires when connecting to the converter unit and keep the wiring distance to no longer than 5 m.

#### 1) MR-RB139/MR-RB137-4

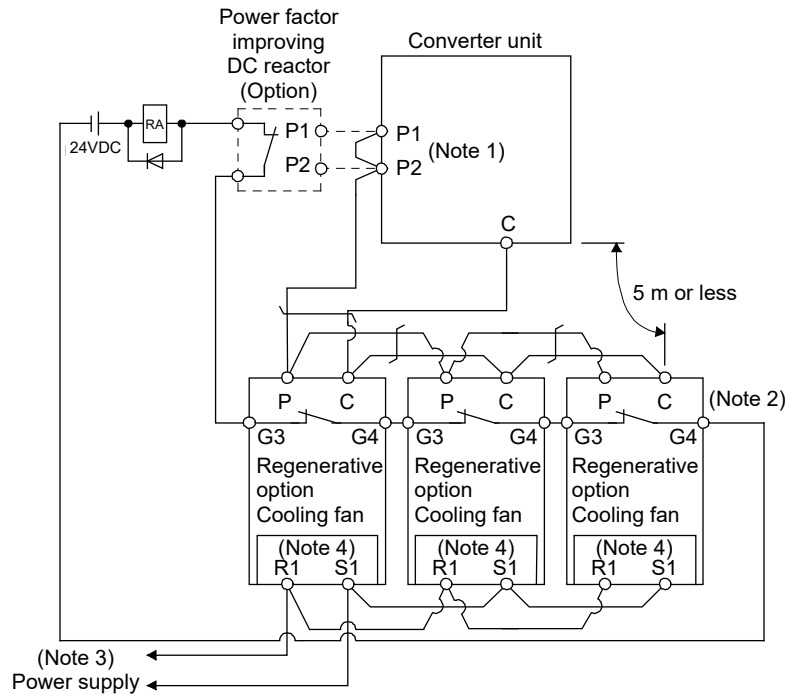

- Note 1. When using the power factor improving DC reactor, remove the short bar across P1 and P2.
- Note 2. Specifications for contacts between G3 and G4  
 Maximum voltage: 120 V AC/DC  
 Maximum current: 0.5 A/4.8 V DC  
 Maximum capacity 2.4 VA
- Note 3. For the power specifications for the cooling fan, refer to the table in Appendix 1.
- Note 4. For MR-RB137-4, "R1" becomes "R400" and "S1" becomes "S400".

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

## 2) MR-RB137/MR-RB13V-4

**POINT**

● For MR-RB137 and MR-RB13V-4, three units are required for each converter unit. For MR-RB137 and MR-RB13V-4, purchase three units.

- Note 1. When using the power factor improving DC reactor, remove the short bar across P1 and P2.
- Note 2. Specifications for contact between G3 and G4  
 Maximum voltage: 120 V AC/DC  
 Maximum current: 0.5 A/4.8 V DC  
 Maximum capacity: 2.4 VA
- Note 3. For the power specifications for the cooling fan, refer to the table in Appendix 1.
- Note 4. For MR-RB13V-4, "R1" becomes "R400" and "S1" becomes "S400".

### 13.6 External Dynamic Brake

The list of external dynamic brakes with a large capacity of 30 kW or more (combination) is shown below.

Name	Compatible				
	MR-J4-B		MR-J2S-B	MR-J4-B-RJ020	
	HG motor Drive	HA-_FS/HC-_FS motor Drive	HA-_FS/HC-_FS motor Drive	HG motor Drive	HA-_FS/HC-_FS motor Drive
DBU-37K	Not compatible	Compatible	Compatible	Not compatible	Compatible
DBU-37K-R1	Compatible	Not compatible	Not compatible	Compatible	Not compatible
DBU-55K-4	Not compatible	Compatible	Compatible	Not compatible	Compatible
DBU-55K-4-R5	Compatible	Not compatible	Not compatible	Compatible	Not compatible

For details, refer to "Part 5: Review on Replacement of MR-J2S-30kW or More with MR-J4-DU\_".

## 14. SETTING PARAMETERS ADDED ON MR-J4-\_B\_-RJ020 SERVO AMPLIFIER

This section explains the procedure for setting parameters added on the MR-J4-\_B\_-RJ020 servo amplifier from the motion controller (in J2S Compatibility Mode).

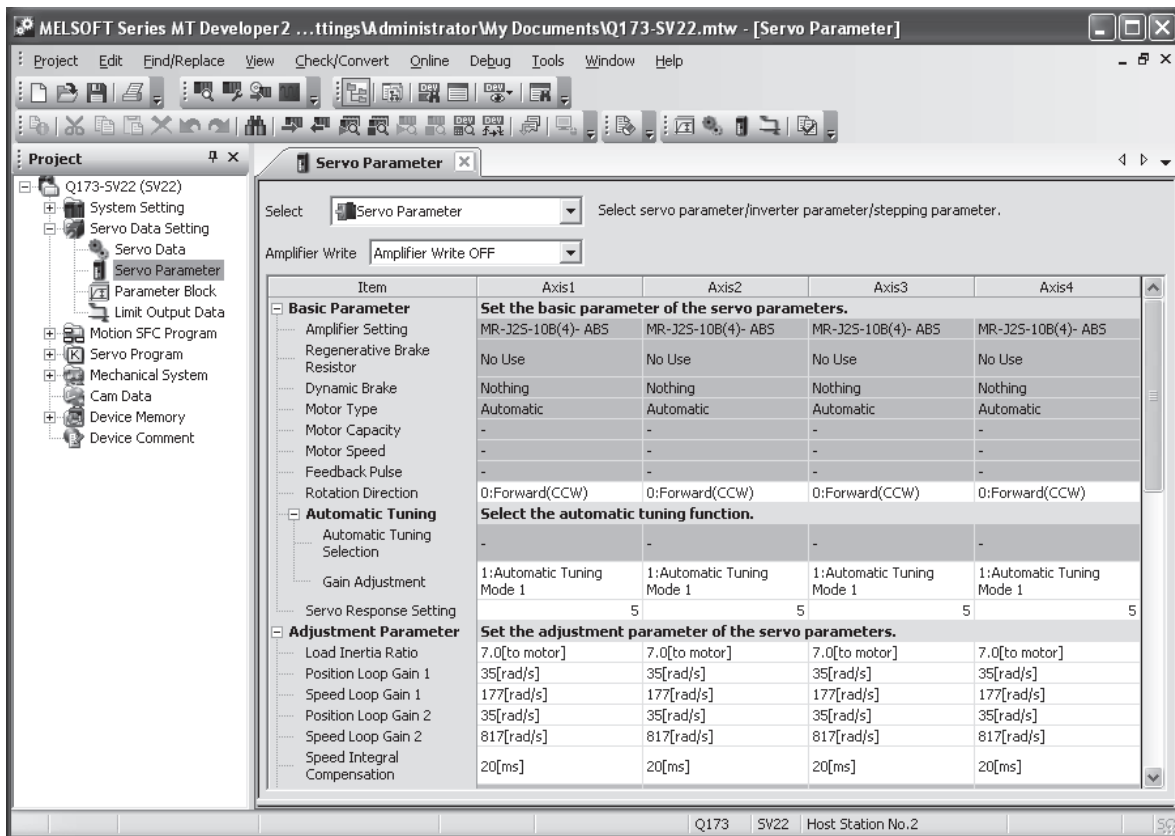

### 14.1 Combination of Motion Controller and Peripheral Software

Series	Motion controller model	Motion controller peripheral software
Q series	Q172CPU(N) Q173CPU(N)	MELSOFT MT Works2 (SW1DNC-MTW2-E) MT Developer (SW6RNC-GSVE)
A series	A171SHCPU(N) A172SHCPU(N) A173UHCPU A273UHCPU	SW3RNC-GSVE

### 14.2 Parameter Setting Procedure

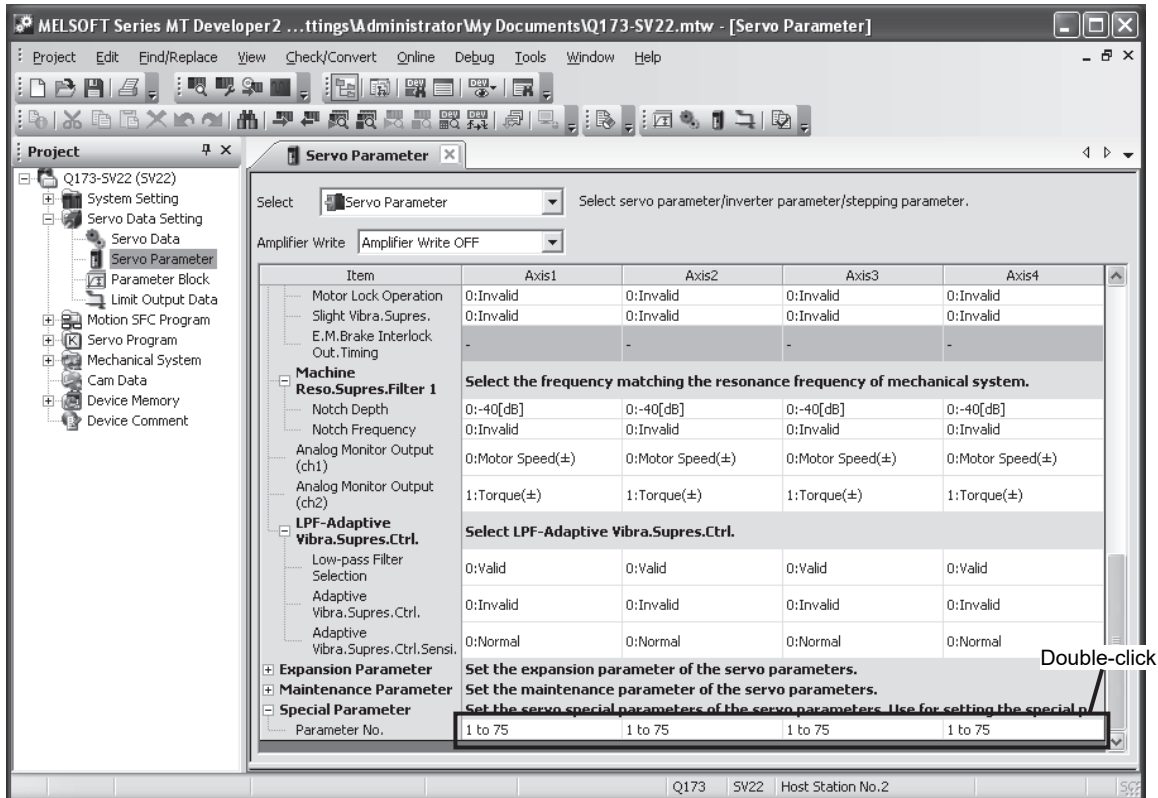

#### 14.2.1 For MELSOFT MT Works2

(1) Display the "Servo parameter" window.

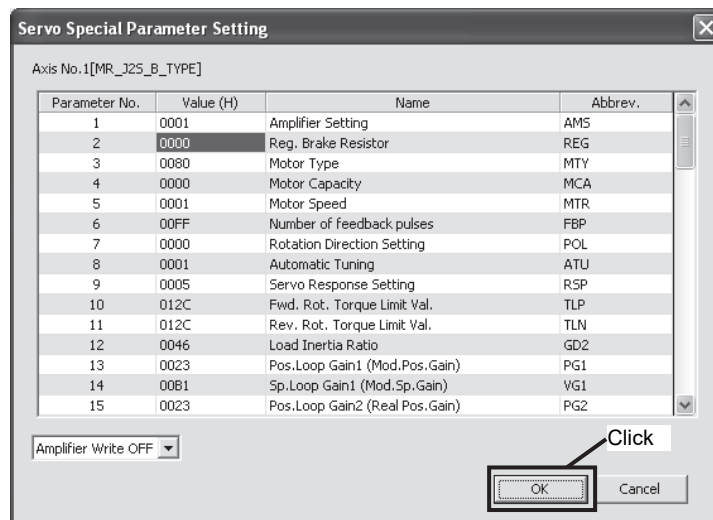

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

- (2) Double-click the setting field "1 to 75" under special parameters "Parameter No." and display the "Servo special parameter setting" dialog.

- (3) Change the parameter setting value.  
After changing the setting value of the applicable parameter, click "OK" so that the setting value is reflected.

Examples of changes of parameter setting values are shown below.

- Change of [Pr. 2 regenerative resistor] (hexadecimal parameter)  
To change the setting value to "0020", enter "0020" as it is.
- Change of [Pr. 12 load inertia moment ratio relative to the servo motor (load inertia ratio) (decimal parameter)  
To change the setting value to "7.0", enter "0046" which is the value resulted from converting "70" to the hexadecimal number.
- Change of [Pr. 39 Electronic dynamic brake operating time] (decimal parameter)  
To change the setting value to "10000", enter "2710" which is the value resulted from converting "10000" to the hexadecimal number.

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

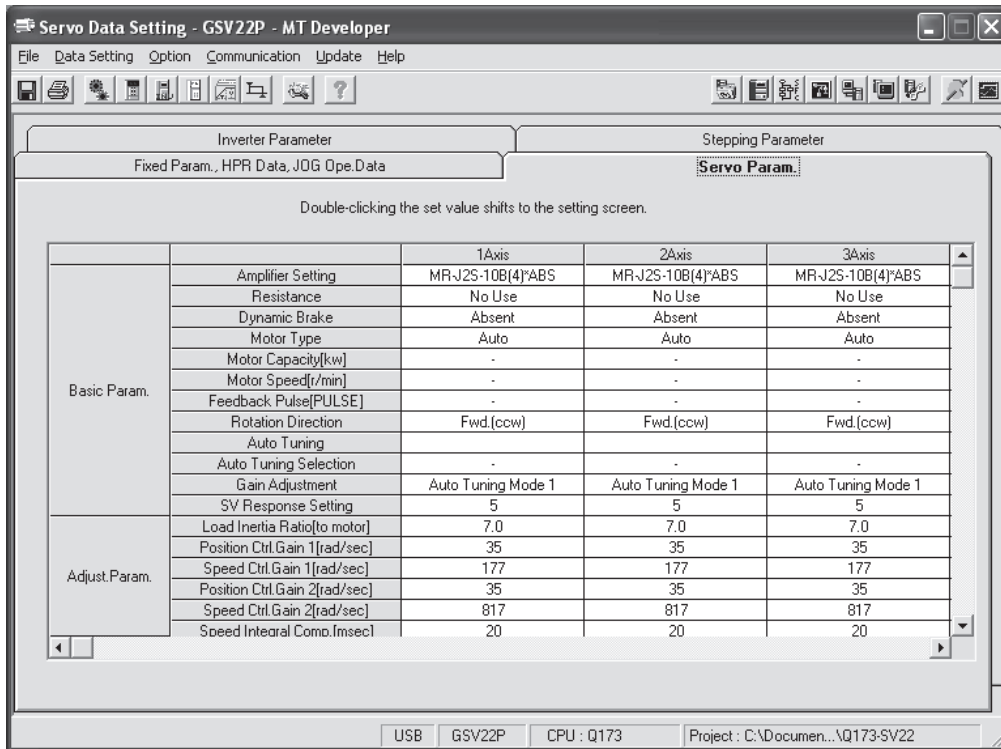

(4) Write the changed parameter in communication. Clicking "Execute" will run a write.

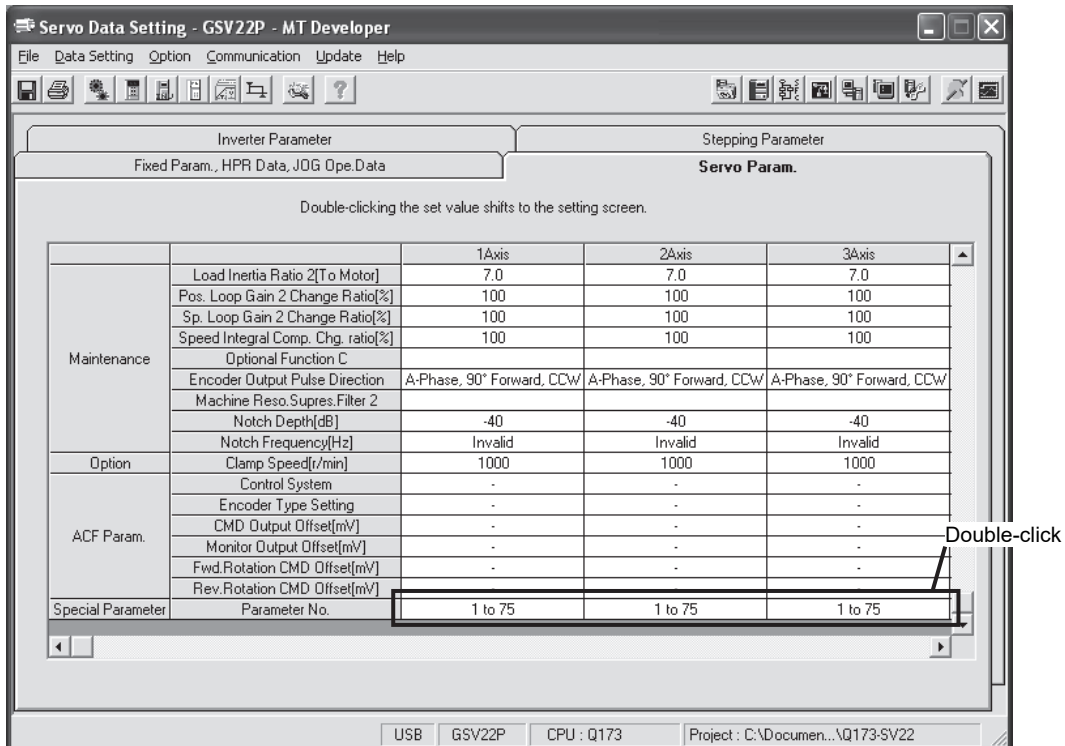

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

## 14.2.2 For MT Developer (software version 00W or later)

(1) Display the "Servo data setting" window.

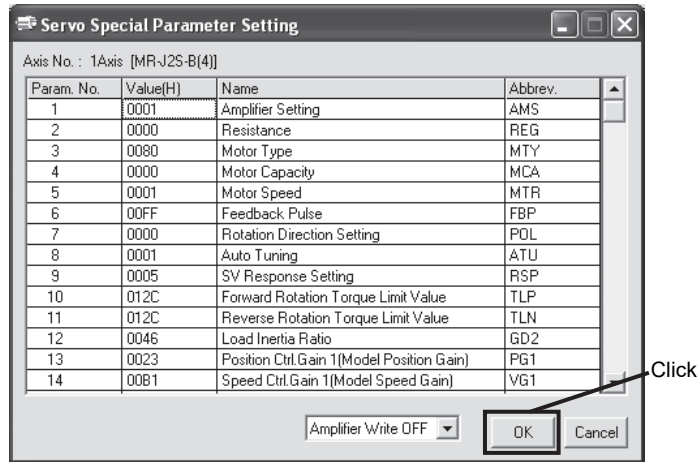

(2) Double-click the setting field "1 to 75" under special parameters "Parameter No." in the "Servo parameter" tab and display the "Servo special parameter setting" dialog.

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

(3) Change the parameter setting value.

After changing the setting value of the applicable parameter, click "OK" so that the setting value is reflected.

Examples of changes of parameter setting values are shown below.

(a) Change of [Pr. 2 regenerative resistor] (hexadecimal parameter)

To change the setting value to "0020", enter "0020" as it is.

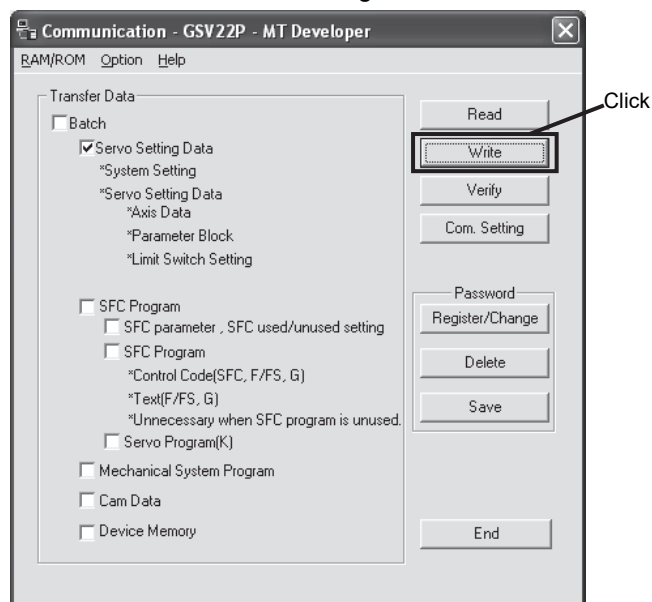

(b) Change of [Pr. 12 load inertia moment ratio relative to the servo motor (load inertia ratio) (decimal parameter)

To change the setting value to "7.0", enter "0046" which is the value resulted from converting "70" to the hexadecimal number.

(c) Change of [Pr. 39 Electronic dynamic brake operating time] (decimal parameter)

To change the setting value to "10000", enter "2710" which is the value resulted from converting "10000" to the hexadecimal number.

(4) Write the changed parameter in communication. Clicking "Write" will run a write.

# [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

## 14.2.3 For MT Developer (software version 00V or earlier) or SW3RNC-GSV

**POINT**

- Perform the steps during communication with the servo controller and the servo amplifier.

(1) Setting procedure

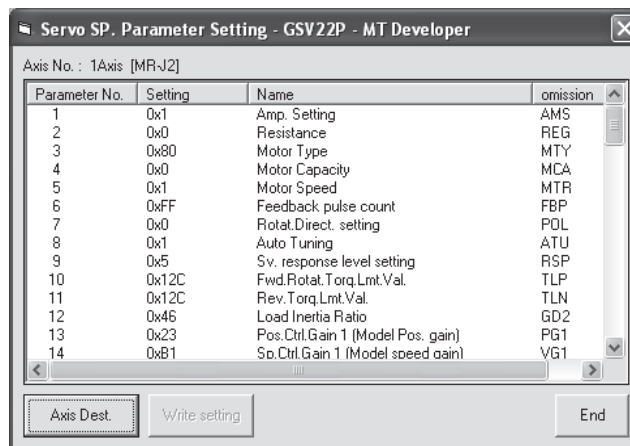

(a) Display the monitor screen.

Set the monitor to a stooped state of monitor using the positioning monitor.

(a) With the monitor screen displayed, use the shortcut keys

"Ctrl" + "Shift" + "Alt" + "O" on the keyboard to display the "Servo special parameter setting" dialog.

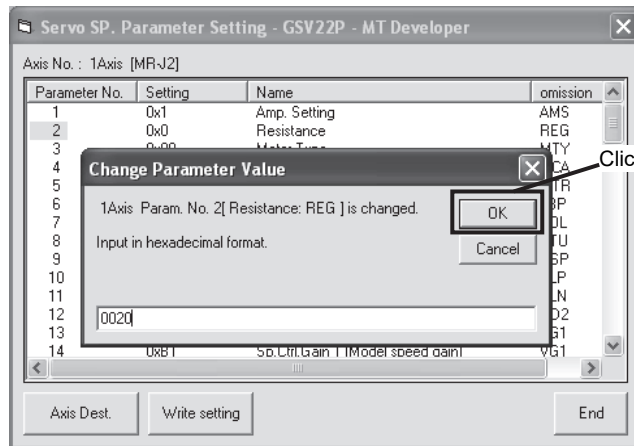

## [Appendix 1] Summary of MR-J4\_B\_-RJ020 + MR-J4-T20

(3) Change the parameter setting value.

After changing the setting value of the applicable parameter, click "OK" to write the setting value to the motion controller and the servo amplifier.

Examples of changes of parameter setting values are shown below.

(a) Change of [Pr. 2 regenerative resistor] (hexadecimal parameter)

To change the setting value to "0020", enter "0020" as it is.

(b) Change of [Pr. 12 load inertia moment ratio relative to the servo motor (load inertia ratio) (decimal parameter)

To change the setting value to "7.0", enter "0046" which is the value resulted from converting "70" to the hexadecimal number.

(c) Change of [Pr. 39 Electronic dynamic brake operating time] (decimal parameter)

To change the setting value to "10000", enter "2710" which is the value resulted from converting "10000" to the hexadecimal number.

(4) Since the parameter values changed in (3) are not reflected in the project, read the servo parameters in communication and save them to the project.

## [Appendix 2] Introduction to Renewal Tool

### [Appendix 2] Introduction to Renewal Tool

POINT
● For details and the latest version of the tool and compatible models, check the website of Mitsubishi Electric System & Service Co., Ltd.

## 1. SUMMARY

The MR-J2S renewal tool is a tool to replace the presently used MR-J2S servo amplifier with the MR-J4 servo amplifier. The company is prepared to provide a renewal kit compatible with the existing mounting dimensions and terminal block cables, and a conversion cable compatible with the existing cables.

### 1.1 Compatible Models

Type	Former model	Replacement
General-purpose interface	MR-J2S- _A	MR-J4- _A
	MR-J2S- _A1	MR-J4- _A1
	MR-J2S- _A4	MR-J4- _A4
SSCNET interface	MR-J2S- _B	MR-J4- _B-RJ020 + MR-J4-T20
	MR-J2S- _B1	MR-J4- _B1-RJ020 + MR-J4-T20
	MR-J2S- _B4	MR-J4- _B4-RJ020 + MR-J4-T20
Built-in positioning function	MR-J2S- _CP	MR-J4- _A-RJ
	MR-J2S- _CP1	MR-J4- _A1-RJ

### 1.2 Features

- It is possible to operate the exiting MR-J2S servo motor with the MR-J4 servo amplifier.
- Wiring work can be shortened because the existing cables can be connected as they are. (except for some models)
- The renewal kit can be mounted using the existing mounting holes.
- The existing space can be effectively used by adopting the sliding mechanism for the renewal kit. (For some models)
- By utilizing the renewal tool, it is possible to replace by proceeding in stages from primary replacement to secondary replacement.

Primary replacement: Replace the servo amplifier only.

Secondary replacement: Replace the servo motor after replacement of the servo amplifier.

Simultaneous replacement: Replace the servo amplifier and the servo motor simultaneously.

\* It is not possible to replace the servo motor only.

\* A separate 24 V DC power supply (current capacity: 80 mA or more) for the interface is required when the internal 24 V DC power supply for the interface is used for the MR-J2S servo amplifier. Must be provided by the customer. (Not included with the renewal tool.)

Analog monitor output	2 ch (0 to ±10 V); 10-bit resolution or equivalent [Monitor signal] • Servo motor speed (±8 V/max. speed) • Torque (±8 V/max. torque) • Current command (±8 V/max. current command) • Speed command (±8 V/max. speed) • Droop pulses (±10 V/128 pulses) • Droop pulses (±10 V/2048 pulses) • Droop pulses (±10 V/8192 pulses) • Droop pulses (±10 V/32768 pulses) • Droop pulses (±10 V/131072 pulses) • Bus voltage (+8 V/400 V)	2 ch (0 to ±10 V); 10-bit resolution or equivalent [Monitor signal] • Servo motor speed (±8 V/max. speed) • Torque (±8 V/max. torque) • Current command (±8 V/max. current command) • Speed command (±8 V/max. speed) • Droop pulses (±10 V/100 pulses) • Droop pulses (±10 V/1000 pulses) • Droop pulses (±10 V/10000 pulses) • Droop pulses (±10 V/100000 pulses) • Bus voltage (+8 V/400 V)		△	(Note 15) (Note 16)

○: Compatible; △: Limited functions or compatible with certain conditions; ×: Incompatible

Refer to Appendix page 2-10 for important points to note.

## [Appendix 2] Introduction to Renewal Tool

---

### <Precautions>

- Note
- The renewal tool is compatible with the following capacity:
    - General-purpose interface/SSCNET interface: 0.1 kW to 0.4 kW (100 V), 0.1 kW to 37 kW (200 V), and 0.6 kW to 55 kW (400 V)
    - Built-in positioning: 0.1 kW to 0.4 kW (100 V) and 0.1 kW to 7 kW (200 V)
  - Note that the coasting distance is different between the MR-J2S servo amplifier and the MR-J4 servo amplifier.  
**When DB assignment function is used for a servo amplifier of 11 kW or more, set the parameter as follows.**
    - For general-purpose interfaces, set [Pr. PD27] as "0006".
    - For SSCNET interfaces, set [Pr. PD08] as "0006".
  - When replacing, some models cannot use the existing regenerative option. Provide regenerative options as necessary by reselecting the capacity, including calculating the regenerative ability again. Refer to Chapter 7.
  - A separate 24 V DC power supply (current capacity: 80 mA or more) for the interface is required** when the internal 24 V DC power supply for the interface is used for the MR-J2S servo amplifier. **Must be provided by the customer. (Not included with the renewal tool.)**
  - There is no restart function in the MR-J4 servo amplifier during momentary power interruption. When replacing, if undervoltage (AL 10.1 or AL 10.2) is generated by instantaneous power failure, reset the alarm (turn off the power once) and restart.
  - Please note that if the renewal kit is used, it is necessary to remove the renewal kit when replacing the servo amplifier cooling fan.
  - When replacing, it is necessary to adjust the command pulse train logic setting between the positioning module and the servo amplifier. For details, refer to Part 2 Section 3.7.
  - This is the time between power-on and servo-on reception. Due to different reception times, sometimes review of the external sequence is necessary upon replacement.
  - When replacing to the MR-J2S servo amplifier, it is necessary to set the parameters to EM1 (DB stop) (at the time of shipment of the MR-J4 servo, the parameter is set to EM2 (deceleration stop)). For details about parameter settings, refer to Part 2 for general-purpose interfaces, Part 3 for SSCNET interfaces, and Part 4 for built-in positioning.  
For built-in positioning, it is not able to change the assignment of the forced stop signal (CN1-42 pin) by the parameter in the MR-J4 servo amplifier. When the assignment of the EMG signal in the existing MR-J2S servo amplifier has been changed, the existing wiring change becomes necessary.
  - This is the time until alarm signal output. Due to different reception times, sometimes review of the external sequence is necessary upon replacement. Refer to Part 7 for details.
  - Note that the renewal tool is **not compatible with alarm code output**.
  - Upon replacement, it is necessary to set the parameter for the encoder output pulses.  
For details about parameter settings, refer to Part 2 for general-purpose interfaces, Part 3 for SSCNET interfaces, and Part 4 for built-in positioning.
  - When replacing, a separate communication cable (USB cable: MR-J3USBCBL3M) is required to connect between the servo amplifier and the personal computer.
  - The renewal tool is **not compatible with RS-422/232C serial communication functions**.
  - Please note that the command pulse frequency and the droop pulse output unit are different.
  - Due to differences in servo motor maximum speed, for secondary and simultaneous replacement the output value of the monitor (servo motor speed) is different from that of the existing servo amplifier.  
Note that it is required to change the program when using monitor output with existing equipment.
  - In order to connect between the SSCNET conversion unit (model: MR-J4-T20) and the personal computer, both the existing communication cable (model: MR-CPCATCBL3M) and the junction cable for RS-232C (model: MR-J4T20CH00) are required.
  - Please note that the control circuit power supply of the 400 V servo amplifier (7 kW or less) between MR-J2S and MR-J4 are different.
  - Not included with the renewal tool for 400 V. Please note that it is required to be laid again when the terminal size etc. are different.
  - When replacing a converter unit, a new cable for CN1 is required to be laid.
  - A renewal kit and mounting attachment are not compatible with a heat sink outside mounting attachment of the MR-J2S servo amplifier.
  - The renewal tool is **not compatible with the DI/DO combination function**.

## [Appendix 2] Introduction to Renewal Tool

### (5) Encoder

\*When the renewal tool is used.

Item		MR-J2S series	MR-J4 series	When the renewal tool is used	Compatibility (*)	Remarks
Encoder	Connector	1 pcs.	1 pc, different connector shape	With conversion cable	○	
	Communication method	Serial communication	Serial communication		○	
	Resolution	131072 pulses/rev	4194304 pulses/rev		△	

○: Compatible; △: Limited functions or compatible with certain conditions; ×: Incompatible

Note. Similar operation is possible using parameter settings. For details about parameter settings, refer to Part 2 for general-purpose interfaces, Part 3 for SSCNET interfaces, and Part 4 for built-in positioning. For the MR-J4-\_B-RJ020 servo amplifier, if the HG series servo motor is used, the encoder resolution per rotation of the servo motor is not 4194304 pulses/rev but becomes 131072 pulses/rev.

### (6) Servo motor

\*When the renewal tool is used.

Item		MR-J2S series	MR-J4 series	When the renewal tool is used	Compatibility (*)	Remarks	
Servo motor	Connector (power supply/brake)	HC-KFS	HG-KR (different connector shape)	With conversion cable	○		
		HC-MFS	HG-MR (different connector shape)		○		
		HC-SFS	HG-SR (different connector shape)		△		(Note 1)
		HC-RFS	HG-RR		○		
		HC-LFS	HG-JR (different connector shape)		△		(Note 1)
		HC-UFS(B) 2000 r/min	HG-UR		○		
		HC-UFS(B) 3000 r/min	HG-KR (different connector shape)		○		
		HA-LFS (7 kW or less)	HG-SR (different connector shape)		○		
		HA-LFS (11 kW or more)	HG-JR (different connector shape)		△		(Note 2) (Note 3) (Note 4)

- Note
- Laying a new electromagnetic brake cable is required when performing a secondary replacement or simultaneous replacement of a motor with brake.
  - If the HA-LFS motor is replaced with the HG-JR motor, it is necessary to change the crimp terminal of the existing power supply cable.  
Refer to Part 8 for details.
  - If the existing motor is replaced with the HG-JR11K1M motor or JR15K1M motor, the replacement motor will not have a cooling fan and thermal terminal block. Because the existing wiring becomes unnecessary, insulate the cables as needed.
  - Laying a new encoder cable is required when performing a replacement of a following motor. Contact a Mitsubishi Electric System & Service Co., Ltd. if a new cable required.
    - HG-JR22K1M(4)
    - HG-JR30K1M(4)
    - HG-JR37K1M(4)
    - HG-JR45K1M4
    - HG-JR55K1M4
    - HG-JR15K1(4)
    - HG-JR20K1(4)
    - HG-JR25K1(4)
    - HG-JR30K1(4)
    - HG-JR37K1(4)

# [Appendix 2] Introduction to Renewal Tool

## 1.3 Renewal Tool Product Names

(1) For general-purpose interface and built-in positioning

(Example) Primary replacement (SC-J2S(CP)J4KT02K)

Shape after assembling

Name
Servo amplifier MR-J4- A (-RJ) (Note 1)

Note 1. **For primary replacement, the software version of the servo amplifier differs depending on the corresponding motor.** Refer to "Part 7: Common Reference Material" in this document.

Name
Renewal kit (SC-J2S(CP)J4KT_K)
Monitor conversion cable (Note 2) The MR-J2S monitor signal is changed for MR-J4.
Control signal conversion cable The MR-J2S encoder signal is changed for MR-J4.
Encoder conversion cable The MR-J2S encoder signal is changed for MR-J4.
Control circuit power supply conversion terminal block (Note 3) Connects to the existing control circuit power supply and regenerative option.
Main circuit power supply conversion terminal block (Note 3) Connects to the existing main circuit power supply and servo motor power supply.

Note 2. The monitor conversion cable compatible with a servo amplifier capacity of 11 kW to 55 kW has a different shape.

Note 3. There is no conversion terminal block in the following model:

- SC-J2S(CP)J4KT5K, 7K
- SC-J2SJ4BS01 to 09

# [Appendix 2] Introduction to Renewal Tool

(2) For SSCNET interface

(Example) Primary replacement (SC-J2SBJ4KT02K)

# [Appendix 2] Introduction to Renewal Tool

## 1.4 Renewal Tool Configuration

(1) For general-purpose interface and built-in positioning

1) Primary replacement:

When replacing the servo amplifier only

2) Secondary replacement: When replacing the servo motor after replacing the servo amplifier

Simultaneous replacement: When replacing the servo amplifier and the servo motor simultaneously

# [Appendix 2] Introduction to Renewal Tool

(2) For SSCNET interface

1) Primary replacement:

When replacing the servo amplifier only

2) Secondary replacement: When replacing the servo motor after replacing the servo amplifier

Simultaneous replacement: When replacing the servo amplifier and the servo motor simultaneously

## [Appendix 2] Introduction to Renewal Tool

### 2. RENEWAL TOOL PRODUCT LIST

#### (1) For general-purpose interface

No.	Product name	Model	Application	Replacement method
1	Renewal kit	SC-J2SJ4KT02K	MR-J4-_A_servo amplifier capacity: For 100 W, 200 W	Used for primary replacement and simultaneous replacement.
2		SC-J2SJ4KT06K	MR-J4-_A_servo amplifier capacity: For 400 W, 600 W	
3		SC-J2SJ4KT1K	MR-J4-_A_servo amplifier capacity: For 700 W, 1 kW	
4		SC-J2SJ4KT3K	MR-J4-_A_servo amplifier capacity: For 2 kW, 3.5 kW	
5		SC-J2SJ4KT5K	MR-J4-_A_servo amplifier capacity: For 5 kW	
6		SC-J2SJ4KT7K	MR-J4-_A_servo amplifier capacity: For 7 kW	
7		SC-J2SJ4KT15K	MR-J4-_A_servo amplifier capacity: For 11 kW, 15 kW	
8		SC-J2SJ4KT22K	MR-J4-_A_servo amplifier capacity: For 22 kW	
9	Servo amplifier side conversion cable set	SC-J2SJ4CSET-01 (for 7 kW or less)	Control signal conversion cable (SC-J2SJ4CTC03M)	
10			SC-J2SJ4CSET-02 (for 11 kW or more)	
				Monitor conversion cable (SC-J2SJ4MOC03M)
				24 V DC connector cable (SC-J2SJ4CTPWC5M)
		Control signal conversion cable (SC-J2SJ4CTC03M)		
Encoder conversion cable (SC-J2SJ4ENC03M)				
Monitor conversion cable (SC-J2SJ4MO2C03M)				
24 V DC connector cable (SC-J2SJ4CTPWC5M)				

#### (2) For SSCNET interface

No.	Product name	Model	Application	Replacement method
1	Renewal kit	SC-J2SBJ4KT02K	MR-J4-_B_-RJ020 servo amplifier capacity: For 100 W, 200 W	Used for primary replacement and simultaneous replacement.
2		SC-J2SBJ4KT06K	MR-J4-_B_-RJ020 servo amplifier capacity: For 400 W, 600 W	
3		SC-J2SBJ4KT1K	MR-J4-_B_-RJ020 amplifier capacity: For 700 W, 1 kW	
4		SC-J2SBJ4KT3K	MR-J4-_B_-RJ020 servo amplifier capacity: For 2 kW, 3.5 kW	
5		SC-J2SBJ4KT5K	MR-J4-_B_-RJ020 servo amplifier capacity: For 5 kW	
6		SC-J2SBJ4KT7K	MR-J4-_B_-RJ020 servo amplifier capacity: For 7 kW	
7		SC-J2SBJ4KT15K	MR-J4-_B_-RJ020 servo amplifier capacity: For 11 kW, 15 kW	
8		SC-J2SBJ4KT22K	MR-J4-_B_-RJ020 servo amplifier capacity: For 22 kW	
9	Servo amplifier side conversion cable set	SC-J2SBJ4CSET-01 (for 7 kW or less)	Control signal conversion cable (SC-J2SBJ4CT1C03M)	
10			SC-J2SBJ4CSET-02 (for 11 kW or more)	
				24 V DC connector cable (SC-J2SJ4CTPWC5M)
				Control signal conversion cable (SC-J2SBJ4CT2C03M)
		Encoder conversion cable (SC-J2SJ4ENC03M)		
24 V DC connector cable (SC-J2SJ4CTPWC5M)				

#### (3) For built-in positioning

No.	Product name	Model	Application	Replacement method
1	Renewal kit	SC-J2SCPJ4KT02K	MR-J4-_A_-RJ servo amplifier capacity: For 100 W, 200 W	Used for primary replacement and simultaneous replacement.
2		SC-J2SCPJ4KT06K	MR-J4-_A_-RJ servo amplifier capacity: For 400 W, 600 W	
3		SC-J2SCPJ4KT1K	MR-J4-_A_-RJ servo amplifier capacity: For 700 W, 1 kW	
4		SC-J2SCPJ4KT3K	MR-J4-_A_-RJ servo amplifier capacity: For 2 kW, 3.5 kW	
5		SC-J2SCPJ4KT5K	MR-J4-_A_-RJ servo amplifier capacity: For 5 kW	
6		SC-J2SCPJ4KT7K	MR-J4-_A_-RJ servo amplifier capacity: For 7 kW	
7	Servo amplifier side conversion cable set	SC-J2SCPJ4CSET-01	Control signal conversion cable (SC-J2SCPJ4CTC03M)	
			Encoder conversion cable (SC-J2SJ4ENC03M)	
			Monitor conversion cable (SC-J2SJ4MOC03M)	
			24 V DC connector cable (SC-J2SJ4CTPWC5M)	

## [Appendix 2] Introduction to Renewal Tool

### (4) Common (Motor side conversion cable)

No.	Product name	Model	Application	Replacement method
1	Power supply conversion Cable	SC-J2SJ4PW1C03M-A1	For HC-KFS, HC-MFS → HG-KR, HG-MR, Load side	Used for secondary replacement and simultaneous replacement.
2		SC-J2SJ4PW1C03M-A2	For HC-KFS, HC-MFS → HG-KR, HG-MR, Opposite to load side	
3		SC-J2SJ4PWBK1C03M-A1	For HC-KFS, HC-MFS → HG-KR, HG-MR, Load side (With brake)	
4		SC-J2SJ4PWBK1C03M-A2	For HC-KFS, HC-MFS → HG-KR, HG-MR, Opposite to load side (With brake)	
5		SC-SAJ3PW2KC1M-S2	For HC-SFS → HG-SR	
6		SC-HAJ3PW1C1M		
7		SC-J2SJ4PW2C1M	For HC-RFS203 with reducer → HG-SR202 with reducer	
8		SC-J2SJ4PW3C1M-■	For HA-LFS11K1M/15K1M → HG-JR11K1M/15K1M	
9	Encoder Conversion cable	SC-HAJ3ENM1C03M-A1	For HC-KFS, HC-MFS → HG-KR, HG-MR, Load side	
10		SC-HAJ3ENM1C03M-A2	For HC-KFS, HC-MFS → HG-KR, HG-MR, Opposite to load side	
11		SC-HAJ3ENM3C1M	For HC-SFS → HG-SR	
12	Brake conversion Cable	SC-BKC1CBL□M-L	For HC-SFS → HG-SR	
13	Cooling fan Conversion cable	SC-J2SJ4FAN1C1M	For HA-LFS → HG-JR	

### (5) Mounting attachment (Note 1, 2, 3)

No.	Product name	Model	Application	Replacement method
1	Mounting attachment	SC-J2SJ4BS01	MR-J4-_A servo amplifier capacity: For 700 W, 1 kW	Used for primary replacement and simultaneous replacement.
2			MR-J4-_B-RJ020 servo amplifier capacity: For 700 W, 1 kW	
3		SC-J2SJ4BS02	MR-J4-_A4 servo amplifier capacity: For 600 W, 1 kW	
4			MR-J4-_B4-RJ020 servo amplifier capacity: For 600 W, 1 kW	
5		SC-J2SJ4BS03	MR-J4-_A servo amplifier capacity: For 2 kW, 3.5 kW	
6			MR-J4-_B4-RJ020 servo amplifier capacity: For 2 kW, 3.5 kW	
7		SC-J2SJ4BS04	MR-J4-_A4 servo amplifier capacity: For 2 kW	
8			MR-J4-_B4-RJ020 servo amplifier capacity: For 2 kW	
9		SC-J2SJ4BS05	MR-J4-_A servo amplifier capacity: For 5 kW	
10			MR-J4-_B-RJ020 servo amplifier capacity: For 5 kW	
11		SC-J2SJ4BS06	MR-J4-_A4 servo amplifier For 3.5 kW	
12			MR-J4-_B4-RJ020 servo amplifier For 3.5 kW	
13		SC-J2SJ4BS07	MR-J4-_A servo amplifier capacity: For 7 kW	
14			MR-J4-_B-RJ020 servo amplifier capacity: For 7 kW	
15		SC-J2SJ4BS08	MR-J4-_A4 servo amplifier capacity: For 7 kW	
16	MR-J4-_B4-RJ020 servo amplifier capacity: For 7 kW			
17	SC-J2SJ4BS09	MR-J4-_A servo amplifier capacity: For 11 kW, 15 kW		
18		MR-J4-_B-RJ020 servo amplifier capacity: For 11 kW, 15 kW		
19	SC-J2SJ4BS10	MR-J4-_A4 servo amplifier capacity: For 11 kW, 15 kW		
20		MR-J4-_B4-RJ020 servo amplifier capacity: For 11 kW, 15 kW		
21	SC-J2SJ4BS11	MR-J4-_A servo amplifier capacity: For 22 kW		
22		MR-J4-_B-RJ020 servo amplifier capacity: For 22 kW		
23	SC-J2SJ4BS12	MR-J4-_A4 servo amplifier capacity: For 22 kW		
24		MR-J4-_B4-RJ020 servo amplifier capacity: For 22 kW		
25	SC-J2SJ4BS13	MR-J4-_A servo amplifier capacity: For 30 kW		
26		MR-J4-_B-RJ020 servo amplifier capacity: For 30 kW		
27	SC-J2SJ4BS14	MR-J4-_A4 servo amplifier capacity: For 30 kW, 37 kW		
28		MR-J4-_B4-RJ020 servo amplifier capacity: For 30 kW, 37 kW		
29	SC-J2SJ4BS15	MR-J4-_A servo amplifier capacity: For 30 kW, 37 kW		
30		MR-J4-_B-RJ020 servo amplifier capacity: For 30 kW, 37 kW		
31	SC-J2SJ4BS16	MR-J4-_A4 servo amplifier capacity: For 37 kW, 45 kW, 55 kW		
32		MR-J4-_B4-RJ020 servo amplifier capacity: For 37 kW, 45 kW, 55 kW		

- Note
1. When replacing a servo amplifier of 400 V class, a mounting attachment compatible with its servo amplifier capacity is required to be purchased. Even when replacing a servo amplifier of 200 V/100 V class, if a conversion terminal block is not required, a mounting attachment also is available.
  2. A conversion cable on the servo amplifier side is not supplied with the mounting attachment and required to be purchased separately.
  3. Since the MR-J2S-500\_4 servo amplifier and the MR-J4-500\_4 servo amplifier have mounting compatibility, no mounting attachment is supplied with them.

## [Appendix 2] Introduction to Renewal Tool

### 3. BASIC CONFIGURATION

Note. MR-J4 series servo amplifier and servo motor are required to be purchased separately.

#### 3.1 Important Points to Note When Replacing

- (1) Please note that replacement may not be possible when multiple units are set in a line due to the clearance between the servo amplifiers, the model, and the number of units. (Refer to Chapter 8 of this Appendix regarding the dimensions)
- (2) Depending on the condition of the existing setup, sometimes noise reduction techniques are necessary when replacing.
- (3) When using the existing cables, please consider the remaining life of the cables. If deterioration is significant, replacing with a new cable is recommended.
- (4) Because the conversion cable does not have a long bending life, fix the cable when using.
- (5) Contact us if using an encoder cable longer than 50 m with long distance wiring. (For secondary and simultaneous replacement) Contact us when replacing with an HG-KR or MR motor if the existing encoder cable is longer than 30 m.
- (6) No oil seal is attached to the standard type MR-J4 servo motor. Take care when selecting if the existing MR-J2S servo motor has an attached oil seal. Contact a sales representative if a servo motor with an oil seal is required.
- (7) Depending on machine conditions (inertia, load, etc.), there is a possibility of insufficient servo amplifier capacity after replacement. Carefully consider the capacity in relation to the replacement.
- (8) Although use of dynamic brake resistance standardly equipped to the replacement MR-J4 servo amplifier is possible, take care because the coasting distance differs depending on the characteristics of the dynamic brake. In addition, do not use dynamic braking at high frequencies.
- (9) Check Part 9 of this document for important points to note when using optional or peripheral equipment.
- (10) Contact a sales representative if the existing MR-J2S servo amplifier or servo motor is a special product.
- (11) Although the servo motor model of the MR-J2S-series servo motor may not be displayed properly with MR Configurator2, this is normal. Do not use the MR Configurator2 advanced functions (machine analyzer, gain search, machine simulation, etc.) because they do not work accurately.

## [Appendix 2] Introduction to Renewal Tool

---

### 3.2 Selection of Products

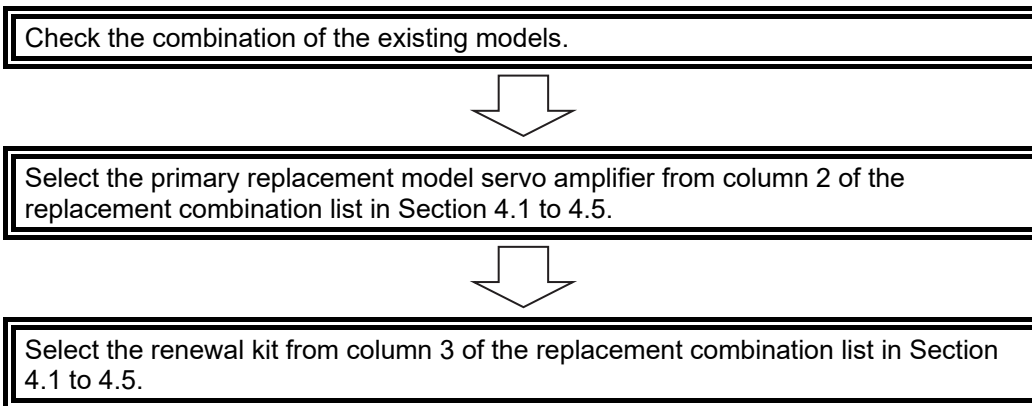

#### 3.2.1 Replacement selection flow

 <b>CAUTION</b>	● Because some existing HC-KFS46, HC-KFS410, HC-RFS, HC-LFS and HA-LFS series servo motors differ in primary replacement servo amplifiers and secondary/simultaneous replacement servo amplifiers, the selection method may differ from the following flow.
--------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

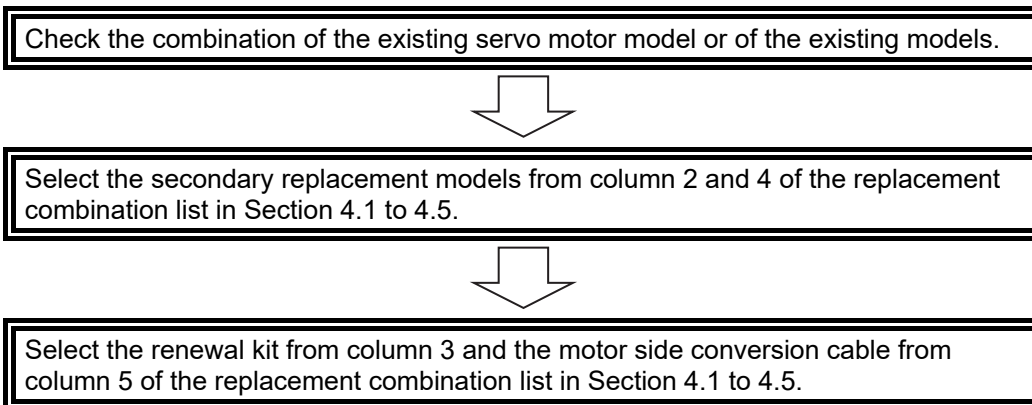

#### (1) Replacement selection flow

(For existing servo motors other than HC-KFS46, HC-KFS410, HC-RFS, HC-LFS and HA-LFS series)

##### 1) Primary replacement menu

##### 2) Secondary replacement menu

##### 3) Simultaneous replacement menu

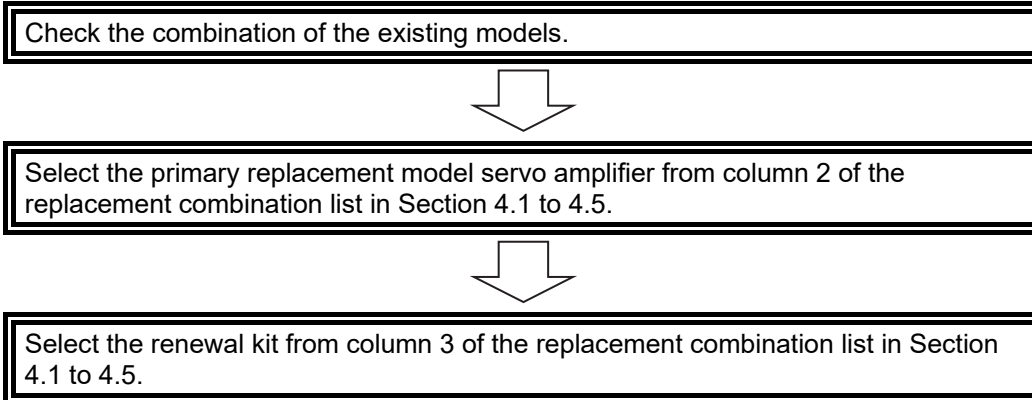

## [Appendix 2] Introduction to Renewal Tool

---

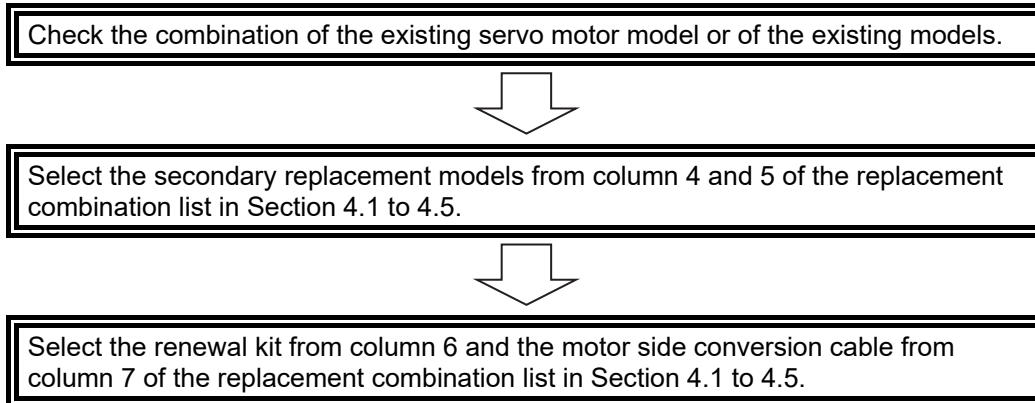

### (2) Replacement selection flow

(For existing HC-KFS46, HC-KFS410, HC-RFS, HC-LFS and HA-LFS series servo motors)

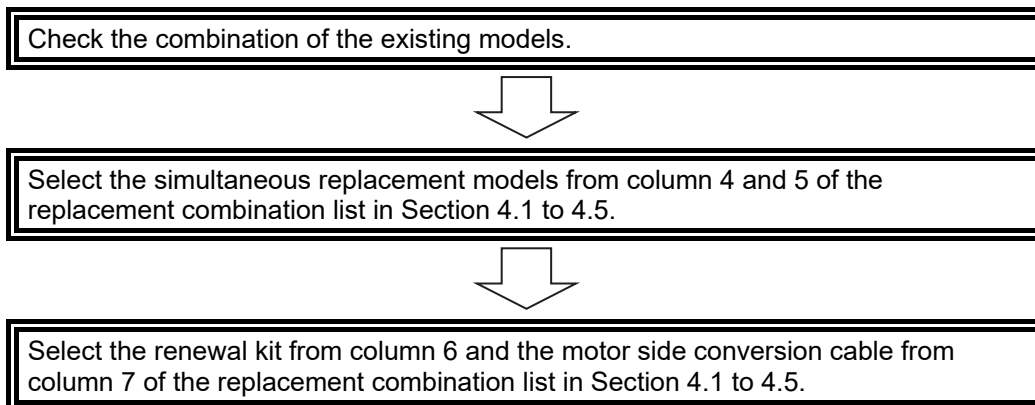

#### 1) Primary replacement menu

#### 2) Secondary replacement menu

#### 3) Simultaneous replacement menu

# [Appendix 2] Introduction to Renewal Tool

## 4. REPLACEMENT COMBINATION LIST

### 4.1 General-Purpose Interface Replacement Combination List (100 V/200 V Class)

#### (1) Existing HC-KFS motor series (standard/with brake, G1, G2 reducer)

○: Compatible; △: Limited functions or compatible with certain conditions; ×: Incompatible

Refer to Appendix page 2-65 for important points to note.

## [Appendix 2] Introduction to Renewal Tool

---

Note 1. Purchase from Mitsubishi Electric.

2. The actual reduction ratio is different when replacing a servo motor. Note that it is necessary to adjust the electronic gear after checking the actual reduction ratio of the servo motor. Refer to Part 8 for details.
3. Note that because the flange dimensions and shaft end dimensions are not compatible it is necessary to change the servo motor shaft connection portion, including the mounting portion and the coupling/pulley when replacing the servo motor. Refer to Part 8 for details.
4. Before replacing the servo motor, the moment of inertia is different from the servo motor before replacement. Take note of the load to motor inertia ratio. Review of the operation pattern is necessary depending on the existing device. Refer to Part 8 for details.
5. If the gain of the existing servo amplifier is extremely high, there may be slight differences in characteristics upon primary replacement. Make sure to set the gain again.
6. Note that it is because the total length of the servo motor becomes shorter, the servo motor connector may interfere with the device side.
7. Laying a new electromagnetic brake cable is required when performing a secondary replacement or simultaneous replacement of a servo motor with brake. Use a servo motor electromagnetic brake cable (SC-BKC1CBL\_M-L or SC-BKC1CBL\_M-H) made by Mitsubishi Electric System & Service Co., Ltd.
8. If the servo motor is replaced, it is necessary to change the crimped terminal of the existing power supply cable. Refer to Part 8 for details.
9. There is no cooling fan in the replacement servo motor when the servo motor is replaced. Because the existing wiring becomes unnecessary, insulate as needed.
10. Simultaneous replacement is recommended because replacing the servo amplifier again is necessary at secondary replacement.
11. The renewal kit cannot be used for secondary or simultaneous replacement due to large differences in servo amplifier shape resulting from changes in servo amplifier capacity.
12. The software version for primary replacement of servo amplifiers are different depending on the servo motor. Consult local sales office when making an order.
13. Contact local sales office regarding replacement of existing models that have not been listed.
14. The replacement servo amplifier, SSCNET conversion unit, and renewal kit are the same for primary, secondary, and simultaneous replacement.
15. When replacing a servo motor, the torque characteristics are different compared with the servo motor before replacement. Refer to Part 8 for details.
16. This is not compatible with primary replacement. Perform a simultaneous replacement of a servo amplifier and a servo motor.
17. When performing a replacement of a servo motor, a new encoder cable is required to be laid. Contact Mitsubishi Electric System & Service Co., Ltd. if a new cable required.
18. A conversion cable on the servo amplifier side is not included in the package. Purchase the following cable set separately according to a servo amplifier to be used and its capacity.
  - MR-J4-700A4 or less: SC-J2SJ4CSET-01
  - MR-J4-11KA4 or more: SC-J2SJ4CSET-02
  - MR-J4-700B4 or less: SC-J2SBJ4CSET-01
  - MR-J4-11KB4 or more: SC-J2SBJ4CSET-02
19. When combining, a renewal kit is not required. Purchase only a conversion cable on the servo amplifier side, if necessary.
20. This servo amplifier is required to be used in combination with the converter unit MR-CR55K.
21. This servo amplifier is required to be used in combination with the converter unit MR-CR55K4.

# [Appendix 2] Introduction to Renewal Tool

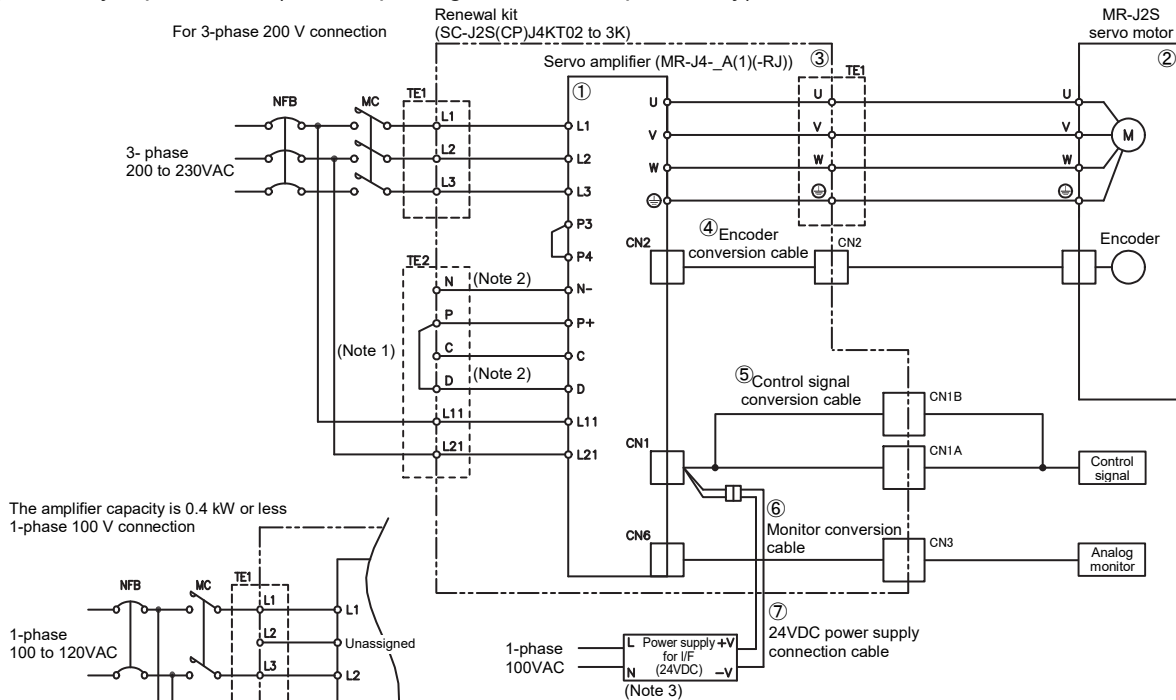

## 5. RENEWAL TOOL CONNECTION DIAGRAM

These diagrams are the connection diagrams for wiring the servo amplifier and servo motor when using the renewal tool.

\* Since a terminal block is not included with the renewal tool (mounting attachment) for 400 V, refer to MR-J4 Servo Amplifier Instruction Manual for the detailed connection.

### 5.1 SC-J2SJ4(CP)KT02K to 3K

#### (1) Primary replacement (when replacing the servo amplifier only)

No.	Product name	
①	Servo amplifier	*1
②	Servo motor	*1
③	Renewal kit	
④	Encoder conversion cable	
⑤	Control signal conversion cable	
⑥	Monitor conversion cable	
⑦	24 V DC power supply connection cable	

\*1: Manufactured by Mitsubishi Electric.

Make sure to remove the short-circuit bar across P and D.

Make sure to remove the wiring between P+ and D.

Connection of the built-in regenerative option (for SC-J2S(CP)J4KT02K to 1K)

Make sure to connect the short-circuit bar across P and D.

(for SC-J2S(CP)J4KT3K)

Make sure to connect the wiring between P+ and D.

- Note 1. When using the regenerative option, make sure to remove the wiring or the short-circuit bar across P (+) and D, connect with the wiring between the renewal kit and the servo amplifier, and mount the regenerative option between P and C. When using a built-in regenerative resistor, make sure to connect the wiring or the short-circuit bar across P (+) and D. For SC-J2S(CP)J4KT3K, insulate the wiring between the renewal kit and the servo amplifier. Ensure the connection destinations are correct. The servo amplifier may malfunction if the connection destinations are incorrect.
2. The N terminal of TE2 is limited to SC-J2S(CP)J4KT1K and 3K. There is no D terminal wiring for SC-J2S(CP)J4KT3K.
3. Required only when the internal power supply (24 V DC) for the I/F is used in the existing MR-J2S servo amplifier. Not included with the renewal tool. Note that a separate 24 V DC power supply (current capacity: 80 mA or more) is required when replacing.

When connecting the 24 V DC power supply, use the "24 V DC power supply connection cable (model: SC-J2SJ4CTPWC5M)" included in the package. (Electric wire colors: Red (+ side); white (- side))

# [Appendix 2] Introduction to Renewal Tool

- (2) Secondary replacement (when replacing the servo motor after replacing the servo amplifier)  
/Simultaneous replacement (when replacing the servo amplifier and the servo motor simultaneously)

No.	Product name	
①	Servo amplifier	*1,2
②	Servo motor	*1
③	Renewal kit	*2
④	Encoder conversion cable	*2
⑤	Control signal conversion cable	*2
⑥	Monitor conversion cable	*2
⑦	24 V DC power supply connection cable	*2
⑧	Power supply conversion cable on the motor side	
⑨	Encoder conversion cable on the motor side	
⑩	Brake conversion cable on the motor side	

\*1: Manufactured by Mitsubishi Electric.  
\*2: For secondary replacement, replacement finished through the primary replacement

Connection of regenerative option (for SC-J2S(CP)J4KT02K to 1K)

Make sure to remove the short-circuit bar across P and D.

(for SC-J2S(CP)J4KT3K)

Make sure to remove the wiring between P+ and D.

Connection of the built-in regenerative option (for SC-J2S(CP)J4KT02K to 1K)

Make sure to connect the short-circuit bar across P and D.

(for SC-J2S(CP)J4KT3K)

Make sure to connect the wiring between P+ and D.

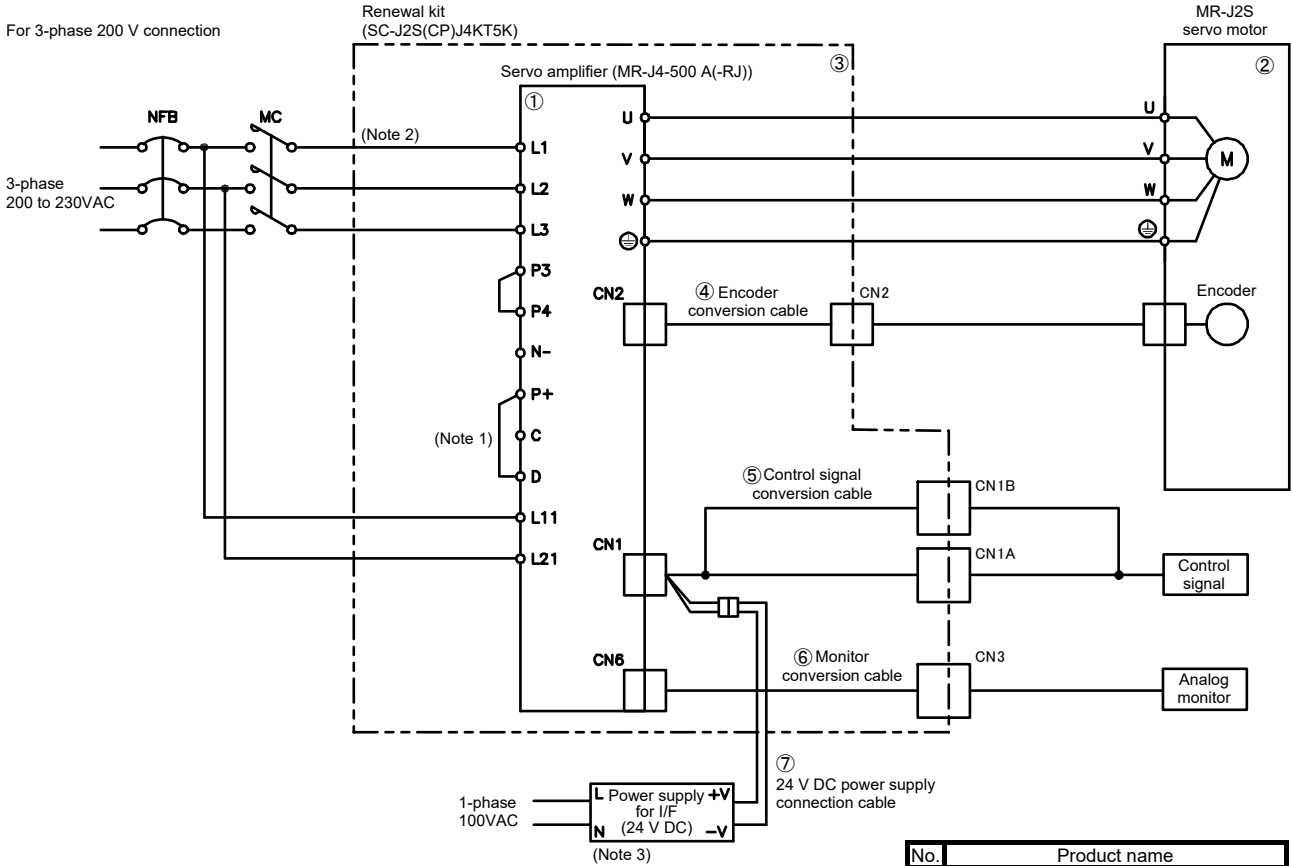

- Note 1. When using the regenerative option, make sure to remove the wiring or the short-circuit bar across P (+) and D, connect with the wiring between the renewal kit and the servo amplifier, and mount the regenerative option between P and C. When using a built-in regenerative resistor, make sure to connect the wiring or the short-circuit bar across P (+) and D. For SC-J2S(CP)J4KT3K, insulate the wiring between the renewal kit and the servo amplifier. Ensure the connection destinations are correct. The servo amplifier may malfunction if the connection destinations are incorrect.
2. The N terminal of TE2 is limited to SC-J2S(CP)J4KT1K and 3K. There is no D terminal wiring for SC-J2S(CP)J4KT3K.
3. Unnecessary if electromagnetic brakes are not installed.
4. Required only when the internal power supply (24 V DC) for the I/F is used in the existing MR-J2S servo amplifier. Not included with the renewal tool. Note that a separate 24 V DC power supply (current capacity: 80 mA or more) is required when replacing.

When connecting the 24 V DC power supply, use the "24 V DC power supply connection cable (model: SC-J2SJ4CTPWC5M)" included in the package. (Electric wire colors: Red (+ side); white (- side))

# [Appendix 2] Introduction to Renewal Tool

## 5.2 SC-J2S(CP)J4KT5K

### (1) Primary replacement (when replacing the servo amplifier only)

No.	Product name	
①	Servo amplifier	*1
②	Servo motor	*1
③	Renewal kit	
④	Encoder conversion cable	
⑤	Control signal conversion cable	
⑥	Monitor conversion cable	
⑦	24 V DC power supply connection cable	

\*1: Manufactured by Mitsubishi Electric.

Connection of regenerative option (for SC-J2S(CP)J4KT5K)

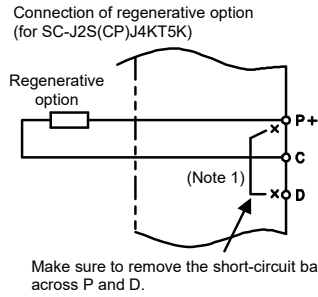

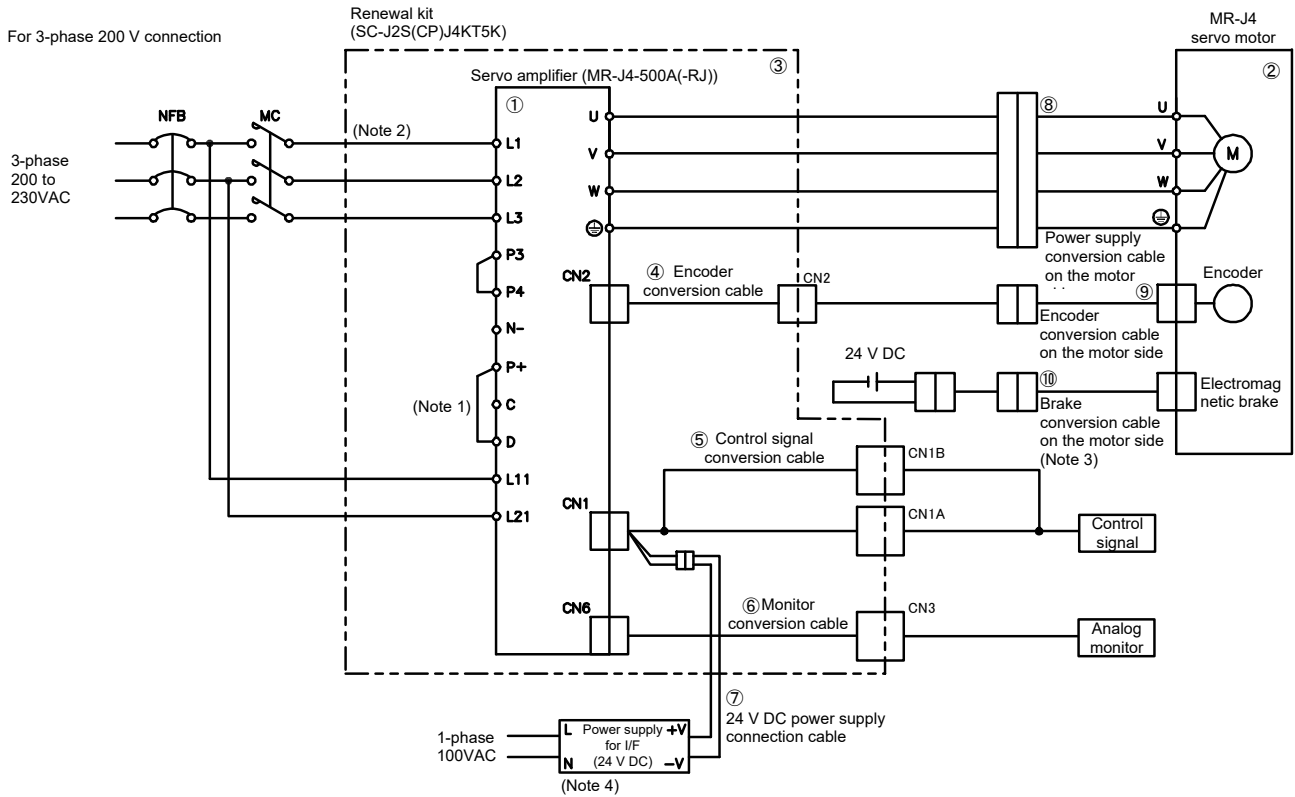

Make sure to remove the short-circuit bar across P and D.

- Note 1. When using the regenerative option, make sure to remove the short-circuit bar between P+ and D, connect with the wiring between the renewal kit and the servo amplifier, and mount the regenerative option between P+ and C. Ensure the connection destinations are correct. The servo amplifier may malfunction if the connection destinations are incorrect.
- Note 2. There is no conversion terminal block in the SC-J2S(CP)J4KT5K renewal kit. Directly connect to the MR-J4 servo amplifier.
- Note 3. Required only when the internal power supply (24 V DC) for the I/F is used in the existing MR-J2S servo amplifier. Not included with the renewal tool. Note that a separate 24 V DC power supply (current capacity: 80 mA or more) is required when replacing.

When connecting the 24 V DC power supply, use the "24 V DC power supply connection cable (model: SC-J2SJ4CTPWC5M)" included in the package. (Electric wire colors: Red (+ side); white (- side))

# [Appendix 2] Introduction to Renewal Tool

- (2) Secondary replacement (when replacing the servo motor after replacing the servo amplifier)/Simultaneous replacement (when replacing the servo amplifier and the servo motor simultaneously)

No.	Product name	
①	Servo amplifier	*1,2
②	Servo motor	*1
③	Renewal kit	
④	Encoder conversion cable	*2
⑤	Control signal conversion cable	*2
⑥	Monitor conversion cable	*2
⑦	24 V DC power supply connection cable	*2
⑧	Power supply conversion cable on the motor side	
⑨	Encoder conversion cable on the motor side	
⑩	Brake conversion cable on the motor side	

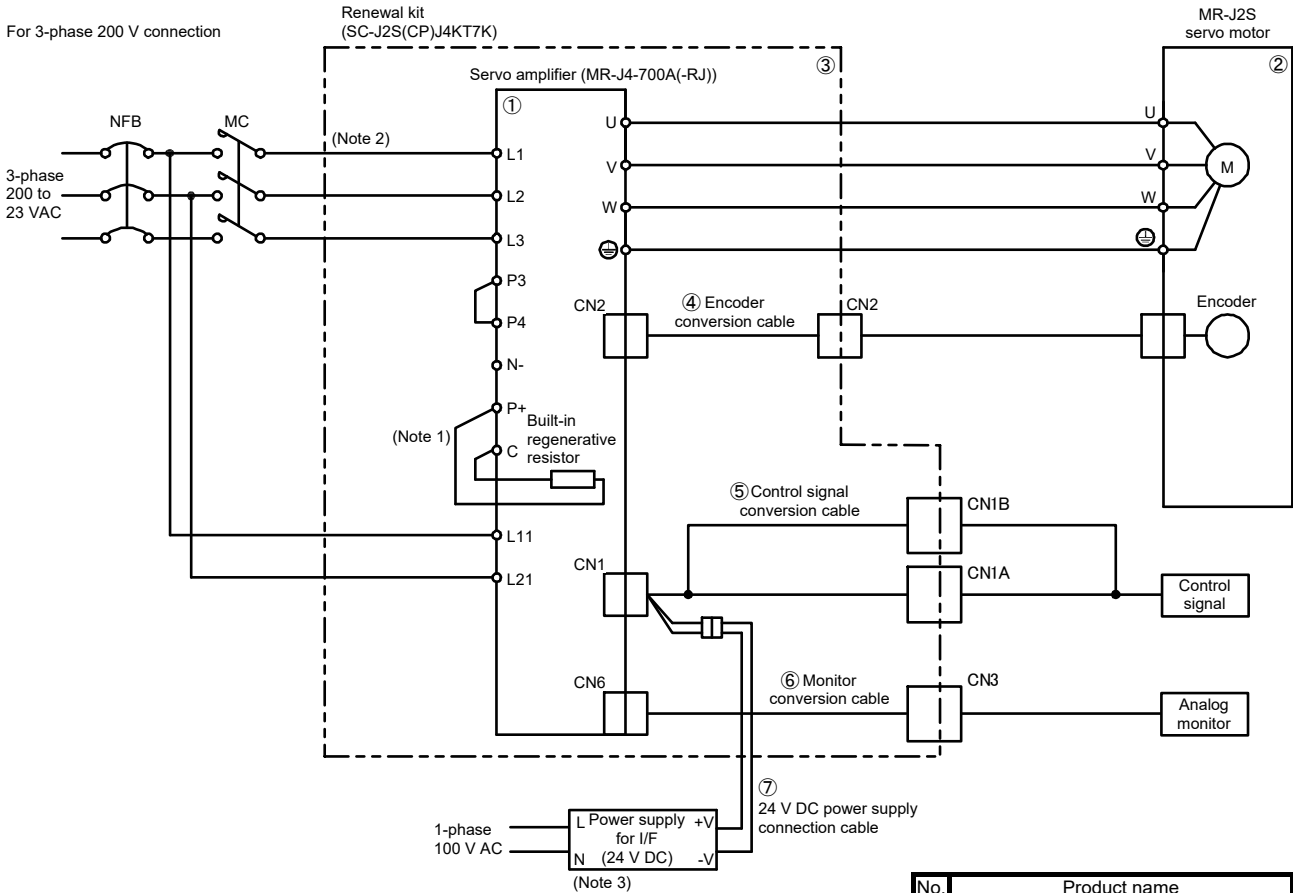

\*1: Manufactured by Mitsubishi Electric.  
 \*2: For secondary replacement, replacement finished through the primary replacement

- Note 1. When using the regenerative option, make sure to remove the short-circuit bar between P+ and D, connect with the wiring between the renewal kit and the servo amplifier, and mount the regenerative option between P+ and C. Ensure the connection destinations are correct. The servo amplifier may malfunction if the connection destinations are incorrect.
- Note 2. There is no conversion terminal block in the SC-J2S(CP)J4KT5K renewal kit. Directly connect to the MR-J4 servo amplifier.
- Note 3. Unnecessary if electromagnetic brakes are not installed.
- Note 4. Required only when the internal power supply (24 V DC) for the I/F is used in the existing MR-J2S servo amplifier. Not included with the renewal tool. Note that a separate 24 V DC power supply (current capacity: 80 mA or more) is required when replacing.
- When connecting the 24 V DC power supply, use the "24 V DC power supply connection cable (model: SC-J2SJ4CTPWC5M)" included in the package. (Electric wire colors: Red (+ side); white (- side))

# [Appendix 2] Introduction to Renewal Tool

## 5.3 SC-J2S(CP)J4KT7K

### (1) Primary replacement (when replacing the servo amplifier only)

Connection of regenerative option (for SC-J2S(CP)J4KT7K)

Make sure to remove the wiring for the built-in regenerative resistor.

No.	Product name	
①	Servo amplifier	*1
②	Servo motor	*1
③	Renewal kit	
④	Encoder conversion cable	
⑤	Control signal conversion cable	
⑥	Monitor conversion cable	
⑦	24 V DC power supply connection cable	

\*1: Manufactured by Mitsubishi Electric.

- Note 1. When using the regenerative option, make sure to remove the wiring for the regenerative resistor built in to the servo amplifier, and mount the regenerative option between P+ and C. Ensure the connection destinations are correct. The servo amplifier may malfunction if the connection destinations are incorrect.
2. There is no conversion terminal block in the SC-J2S(CP)J4KT7K renewal kit. Directly connect to the MR-J4 servo amplifier.
3. Required only when the internal power supply (24 V DC) for the I/F is used in the existing MR-J2S servo amplifier. Not included with the renewal tool. Note that a separate 24 V DC power supply (current capacity: 80 mA or more) is required when replacing.

When connecting the 24 V DC power supply, use the "24 V DC power supply connection cable (model: SC-J2SJ4CTPWC5M)" included in the package. (Electric wire colors: Red (+ side); white (- side))

# [Appendix 2] Introduction to Renewal Tool

- (2) Secondary replacement (when replacing the servo motor after replacing the servo amplifier)/Simultaneous replacement (when replacing the servo amplifier and the servo motor simultaneously)

Connection of regenerative option (for SC-J2S(CP)J4KT7K)

Make sure to remove the wiring for the built-in regenerative resistor.

No.	Product name	
①	Servo amplifier	*1,2
②	Servo motor	*1
③	Renewal kit	
④	Encoder conversion cable	*2
⑤	Control signal conversion cable	*2
⑥	Monitor conversion cable	*2
⑦	24 V DC power supply connection cable	*2
⑧	Power supply conversion cable on the motor side	
⑨	Encoder conversion cable on the motor side	
⑩	Brake conversion cable on the motor side	

\*1: Manufactured by Mitsubishi Electric.

\*2: For secondary replacement, replacement finished through the primary replacement

- Note 1. When using the regenerative option, make sure to remove the wiring for the regenerative resistor built in to the servo amplifier, and mount the regenerative option between P+ and C. Ensure the connection destinations are correct. The servo amplifier may malfunction if the connection destinations are incorrect.
- Note 2. There is no conversion terminal block in the SC-J2S(CP)J4KT7K renewal kit. Directly connect to the MR-J4 servo amplifier.
- Note 3. Unnecessary if electromagnetic brakes are not installed.
- Note 4. Required only when the internal power supply (24 V DC) for the I/F is used in the existing MR-J2S servo amplifier. Not included with the renewal tool. Note that a separate 24 V DC power supply (current capacity: 80 mA or more) is required when replacing.

When connecting the 24 V DC power supply, use the "24 V DC power supply connection cable (model: SC-J2SJ4CTPWC5M)" included in the package. (Electric wire colors: Red (+ side); white (- side))

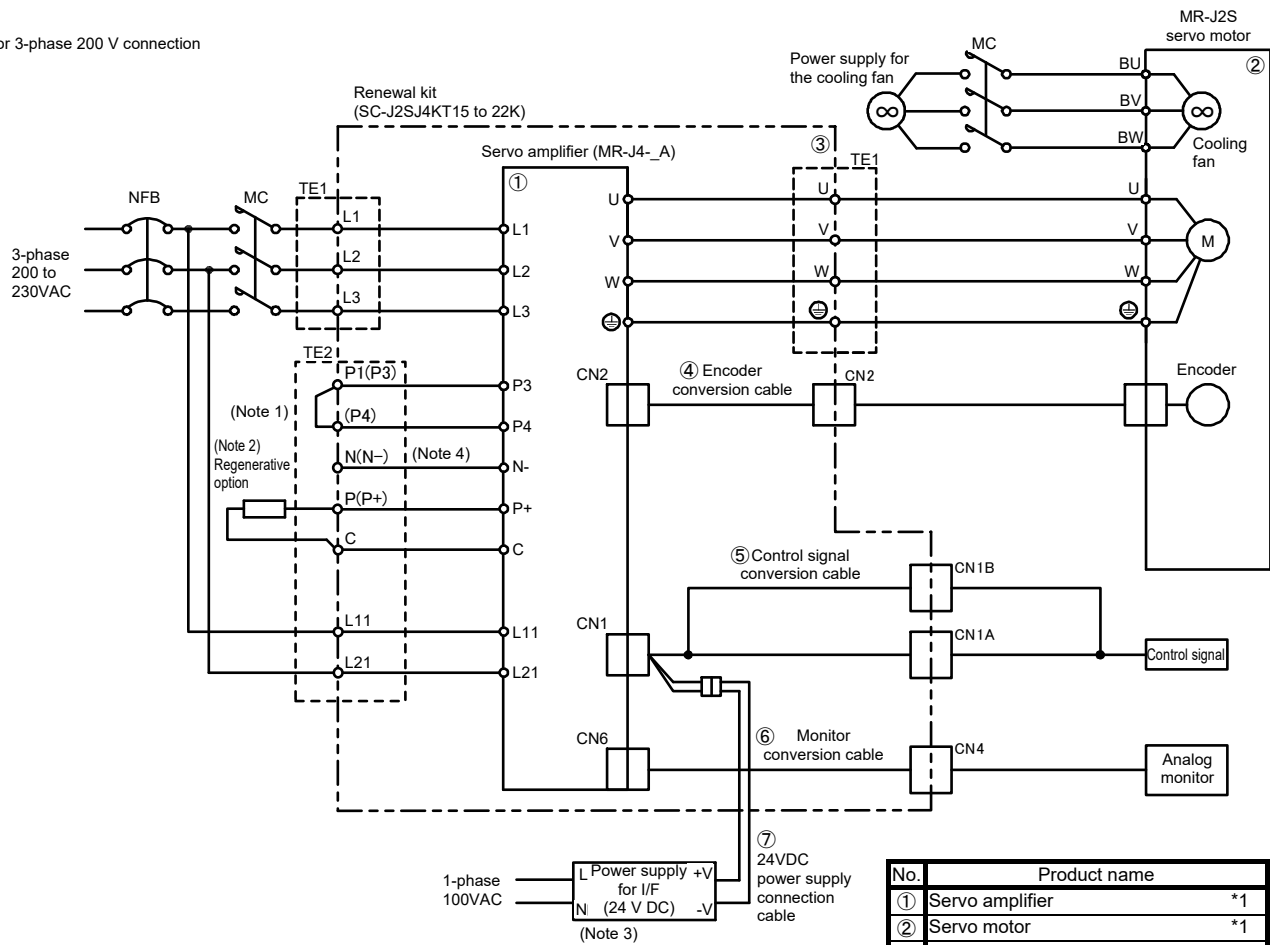

# [Appendix 2] Introduction to Renewal Tool

## 5.4 SC-J2SJ4KT15K, 22K

### (1) Primary replacement (when replacing the servo amplifier only)

For 3-phase 200 V connection

- Note 1. Make sure to connect between P3 and P4. When using the power factor improving DC reactor, remove the short circuit bar between P3 and P4 before connection.
- Note 2. When using the regenerative option, make sure to mount the regenerative option between P+ and C. Ensure the connection destinations are correct. The servo amplifier may malfunction if the connection destinations are incorrect.
- Note 3. Required only when the internal power supply (24 V DC) for the I/F is used in the existing MR-J2S- \_A\_ servo amplifier. Not included with the renewal tool. Note that a separate 24 V DC power supply (current capacity: 80 mA or more) is required when replacing.  
When connecting the 24 V DC power supply, use the "24 V DC power supply connection cable (model: SC-J2SJ4CTPWC5M)" included in the package. (Electric wire colors: Red (+ side); white (- side))
- Note 4. When connecting a power regenerative converter (FR-RC-\_K) and a brake unit (FR-BU2-\_K), connect between P+ and N-. Make sure to remove the built-in regenerative resistor or the regenerative option.

## [Appendix 2] Introduction to Renewal Tool

### (2) Secondary replacement (when replacing the servo motor after replacing the servo amplifier)/Simultaneous replacement (when replacing the servo amplifier and the servo motor simultaneously)

For 3-phase 200 V connection

No.	Product name	
①	Servo amplifier	*1,2
②	Servo motor	*1
③	Renewal kit	
④	Encoder conversion cable	*2
⑤	Control signal conversion cable	*2
⑥	Monitor conversion cable	*2
⑦	24 V DC power supply connection cable	*2
⑧	Power supply conversion cable on the motor side	
⑨	Encoder conversion cable on the motor side	
⑩	Brake conversion cable on the motor side	
⑪	Conversion cable for the cooling fan on the motor side	

\*1: Manufactured by Mitsubishi Electric.

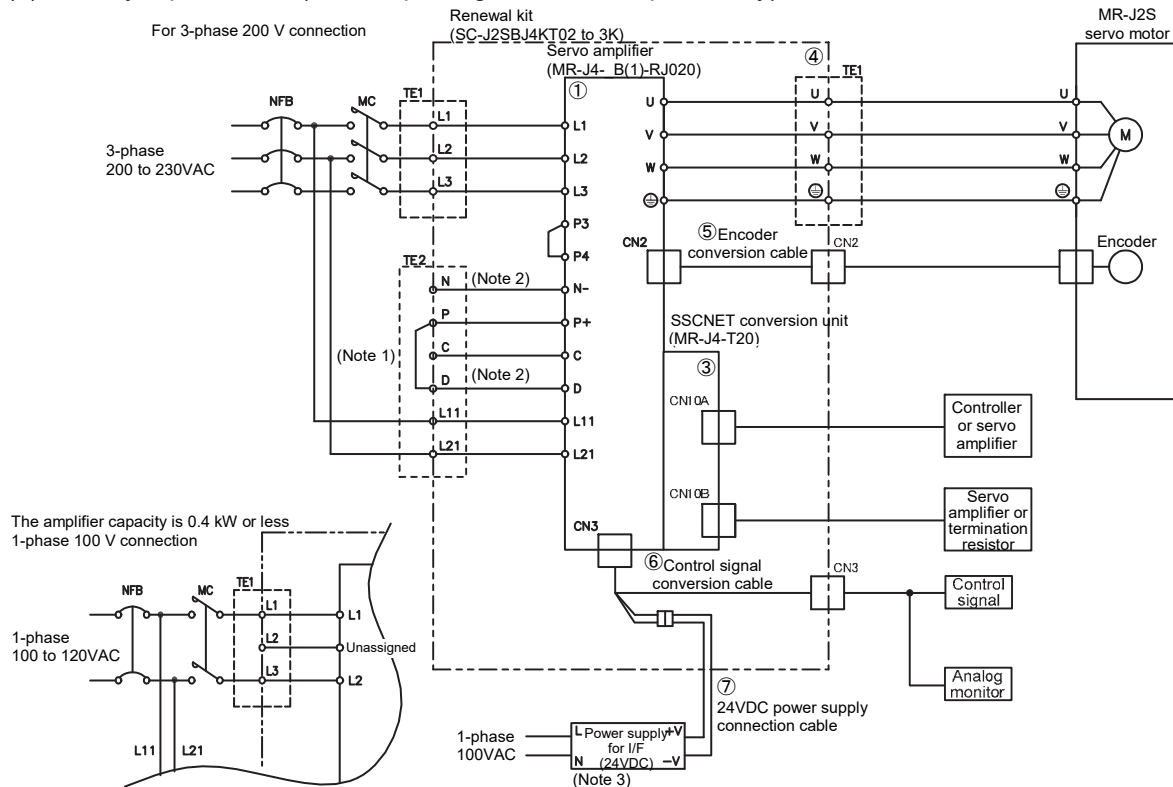

\*2: For secondary replacement, replacement finished through the primary replacement

- Note
- Make sure to connect between P3 and P4. When using the power factor improving DC reactor, remove the short circuit bar between P3 and P4 before connection.
  - When using the regenerative option, make sure to mount the regenerative option between P+ and C. Ensure the connection destinations are correct. If the connection destinations are incorrect, the servo amplifier may malfunction
  - Required only when the internal power supply (24 V DC) for the I/F is used in the existing MR-J2S- \_A\_ servo amplifier. Not included with the renewal tool. Note that a separate 24 V DC power supply (current capacity: 80 mA or more) is required when replacing.  
When connecting the 24 V DC power supply, use the "24 V DC power supply connection cable (model: SC-J2SJ4CTPWC5M)" included in the package.  
(Electric wire colors: Red (+ side); white (- side))
  - When connecting a power regenerative converter (FR-RC- \_K) and a brake unit (FR-BU2- \_K), connect between P+ and N-. Make sure to remove the built-in regenerative resistor or the regenerative option.
  - Unnecessary if electromagnetic brakes are not installed.
  - Required for the HG-JR22K1M motor only. There is no cooling fan for the HG-JR11K1M or HG-JR15K1M motor. Because the existing wiring becomes unnecessary, insulate as needed.
  - There is no cooling fan for the HG-JR11K1M or HG-JR15K1M motor. Because the existing wiring will become unnecessary, terminate the cables.
  - After replacing with the HG-JR22K1M, HG-JR30K1M, HG-JR37K1M, HG-JR45K1M or HG-JR55K1M motor, a new encoder cable is required to be laid. Contact Mitsubishi Electric System & Service Co., Ltd. if a new cable required.  
\* When using an existing encoder cable, an alarm No. AL 46.3 (thermistor disconnected error) occurs.

# [Appendix 2] Introduction to Renewal Tool

## 5.5 SC-J2SBJ4KT02K to 3K

### (1) Primary replacement (when replacing the servo amplifier only)

Connection of regenerative option (for SC-J2SBJ4KT02K to 1K)

Make sure to remove the short-circuit bar across P and D.

(for SC-J2SBJ4KT3K)

Make sure to remove the wiring between P+ and D.

Connection of the built-in regenerative option (for SC-J2SBJ4KT02K to 1K)

Make sure to connect the short-circuit bar across P and D.

(for SC-J2SBJ4KT3K)

Make sure to connect the wiring between P+ and D.

**Note 1.** When using the regenerative option, make sure to remove the wiring or the short-circuit bar across P (+) and D, connect with the wiring between the renewal kit and the servo amplifier, and mount the regenerative option between P and C. When using a built-in regenerative resistor, make sure to connect the wiring or the short-circuit bar across P (+) and D. For SC-J2SBJ4KT3K, insulate the wiring between the renewal kit and the servo amplifier. Ensure the connection destinations are correct. The servo amplifier may malfunction if the connection destinations are incorrect.

**Note 2.** The N terminal of TE2 is limited to SC-J2SBJ4KT1K and 3K. There is no D terminal wiring for SC-J2SBJ4KT3K.

**Note 3.** Required only when the internal power supply (24 V DC) for the I/F is used in the existing MR-J2S- \_B servo amplifier.

Not included with the renewal tool. Note that a separate 24 V DC power supply (current capacity: 80 mA or more) is required when replacing.

When connecting the 24 V DC power supply, use the "24 V DC power supply connection cable (model: SC-J2SJ4CTPWC5M)" included in the package. (Electric wire colors: Red (+ side); white (- side))

# [Appendix 2] Introduction to Renewal Tool

- (2) Secondary replacement (when replacing the servo motor after replacing the servo amplifier)/Simultaneous replacement (when replacing the servo amplifier and the servo motor simultaneously)

No.	Product name	
①	Servo amplifier	*1,2
②	Servo motor	*1
③	SSCNET conversion unit	*1,2
④	Renewal kit	*2
⑤	Encoder conversion cable	*2
⑥	Control signal conversion cable	*2
⑦	24 V DC power supply connection cable	*2
⑧	Power supply conversion cable on the motor side	
⑨	Encoder conversion cable on the motor side	
⑩	Brake conversion cable on the motor side	

\*1: Manufactured by Mitsubishi Electric.  
 \*2: For secondary replacement, replacement finished through the primary replacement

Connection of regenerative option (for SC-J2SBJ4KT02K to 1K)

Make sure to remove the short-circuit bar across P and D.

(for SC-J2SBJ4KT3K)

Make sure to remove the wiring between P+ and D.

Connection of the built-in regenerative option (for SC-J2SBJ4KT02K to 1K)

Make sure to connect the short-circuit bar across P and D.

(for SC-J2SBJ4KT3K)

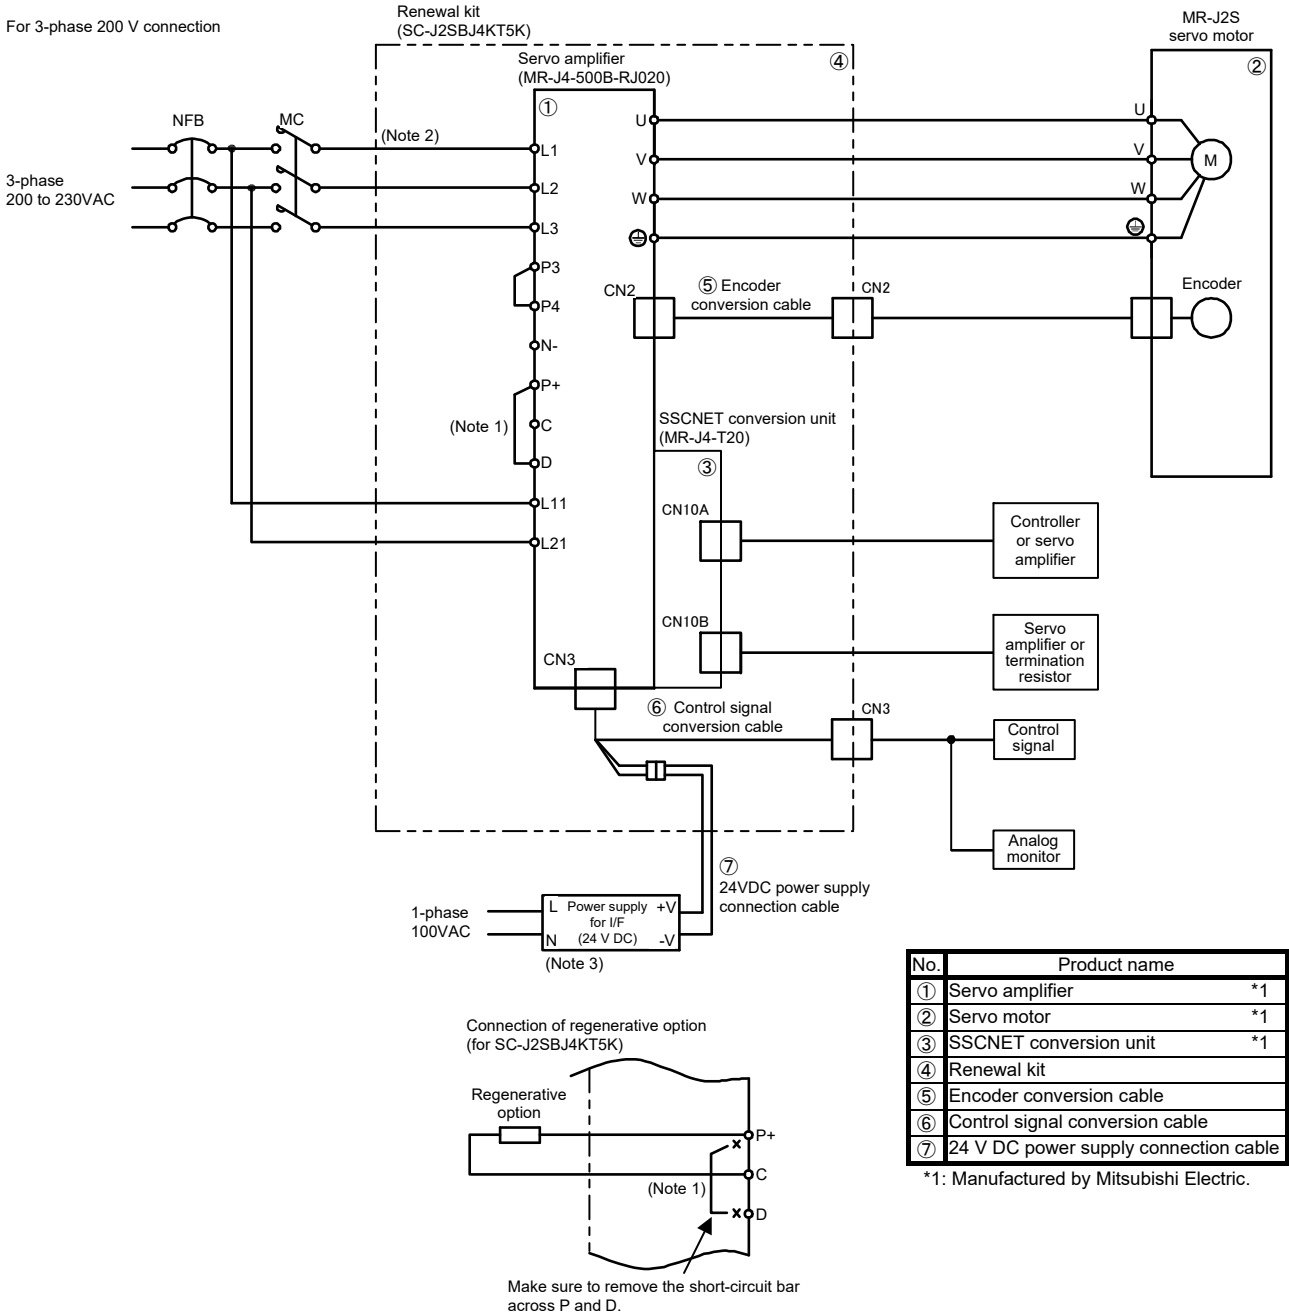

Make sure to insulate the wiring.

- Note 1. When using the regenerative option, make sure to remove the wiring or the short-circuit bar across P (+) and D, connect with the wiring between the renewal kit and the servo amplifier, and mount the regenerative option between P and C.  
 When using a built-in regenerative resistor, make sure to connect the wiring or the short-circuit bar across P (+) and D. For SC-J2SBJ4KT3K, insulate the wiring between the renewal kit and the servo amplifier. Ensure the connection destinations are correct. The servo amplifier may malfunction if the connection destinations are incorrect.
- Note 2. The N terminal of TE2 is limited to SC-J2SBJ4KT1K and 3K. There is no D terminal wiring for SC-J2SBJ4KT3K.
- Note 3. Unnecessary if electromagnetic brakes are not installed.
- Note 4. Required only when the internal power supply (24 V DC) for the I/F is used in the existing MR-J2S- \_B servo amplifier. Not included with the renewal tool. Note that a separate 24 V DC power supply (current capacity: 80 mA or more) is required when replacing.  
 When connecting the 24 V DC power supply, use the "24 V DC power supply connection cable (model: SC-J2SJ4CTPWC5M)" included in the package. (Electric wire colors: Red (+ side); white (- side))

# [Appendix 2] Introduction to Renewal Tool

## 5.6 SC-J2SBJ4KT5K

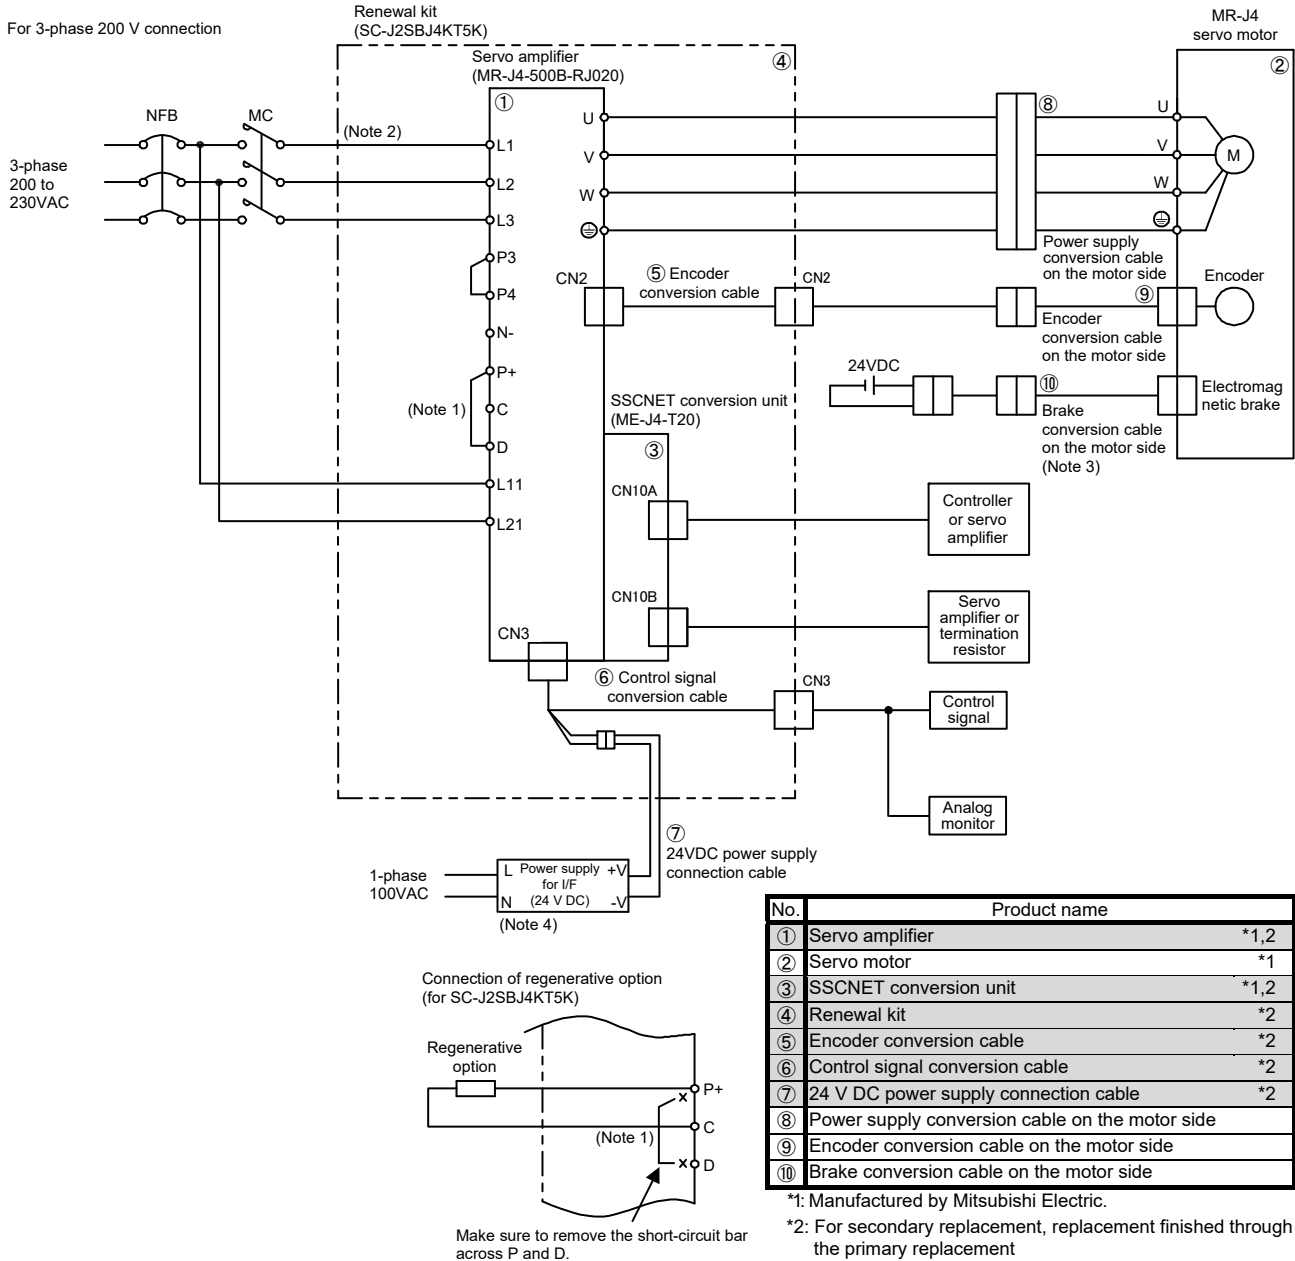

### (1) Primary replacement (when replacing the servo amplifier only)

- Note 1. When using the regenerative option, make sure to remove the short-circuit bar between P+ and D, connect with the wiring between the renewal kit and the servo amplifier, and mount the regenerative option between P+ and C. Ensure the connection destinations are correct. The servo amplifier may malfunction if the connection destinations are incorrect.
- Note 2. There is no conversion terminal block in the SC-J2SBJ4KT5K renewal kit. Directly connect to the MR-J4 servo amplifier.
- Note 3. Required only when the internal power supply (24 V DC) for the I/F is used in the existing MR-J2S- \_B servo amplifier. Not included with the renewal tool. Note that a separate 24 V DC power supply (current capacity: 80 mA or more) is required when replacing.
- When connecting the 24 V DC power supply, use the "24 V DC power supply connection cable (model: SC-J2SJ4CTPWC5M)" included in the package. (Electric wire colors: Red (+ side); white (- side))

# [Appendix 2] Introduction to Renewal Tool

- (2) Secondary replacement (when replacing the servo motor after replacing the servo amplifier)/Simultaneous replacement (when replacing the servo amplifier and the servo motor simultaneously)

- Note 1. When using the regenerative option, make sure to remove the short-circuit bar between P+ and D, connect with the wiring between the renewal kit and the servo amplifier, and mount the regenerative option between P+ and C. Ensure the connection destinations are correct. The servo amplifier may malfunction if the connection destinations are incorrect.
- Note 2. There is no conversion terminal block in the SC-J2SBJ4KT5K renewal kit. Directly connect to the MR-J4 servo amplifier.
- Note 3. Unnecessary if electromagnetic brakes are not installed.
- Note 4. Required only when the internal power supply (24 V DC) for the I/F is used in the existing MR-J2S- \_B servo amplifier. Not included with the renewal tool. Note that a separate 24 V DC power supply (current capacity: 80 mA or more) is required when replacing.
- When connecting the 24 V DC power supply, use the "24 V DC power supply connection cable (model: SC-J2SJ4CTPWC5M)" included in the package. (Electric wire colors: Red (+ side); white (- side))

# [Appendix 2] Introduction to Renewal Tool

## 5.7 SC-J2SBJ4KT7K

### (1) Primary replacement (when replacing the servo amplifier only)

For 3-phase 200 V connection

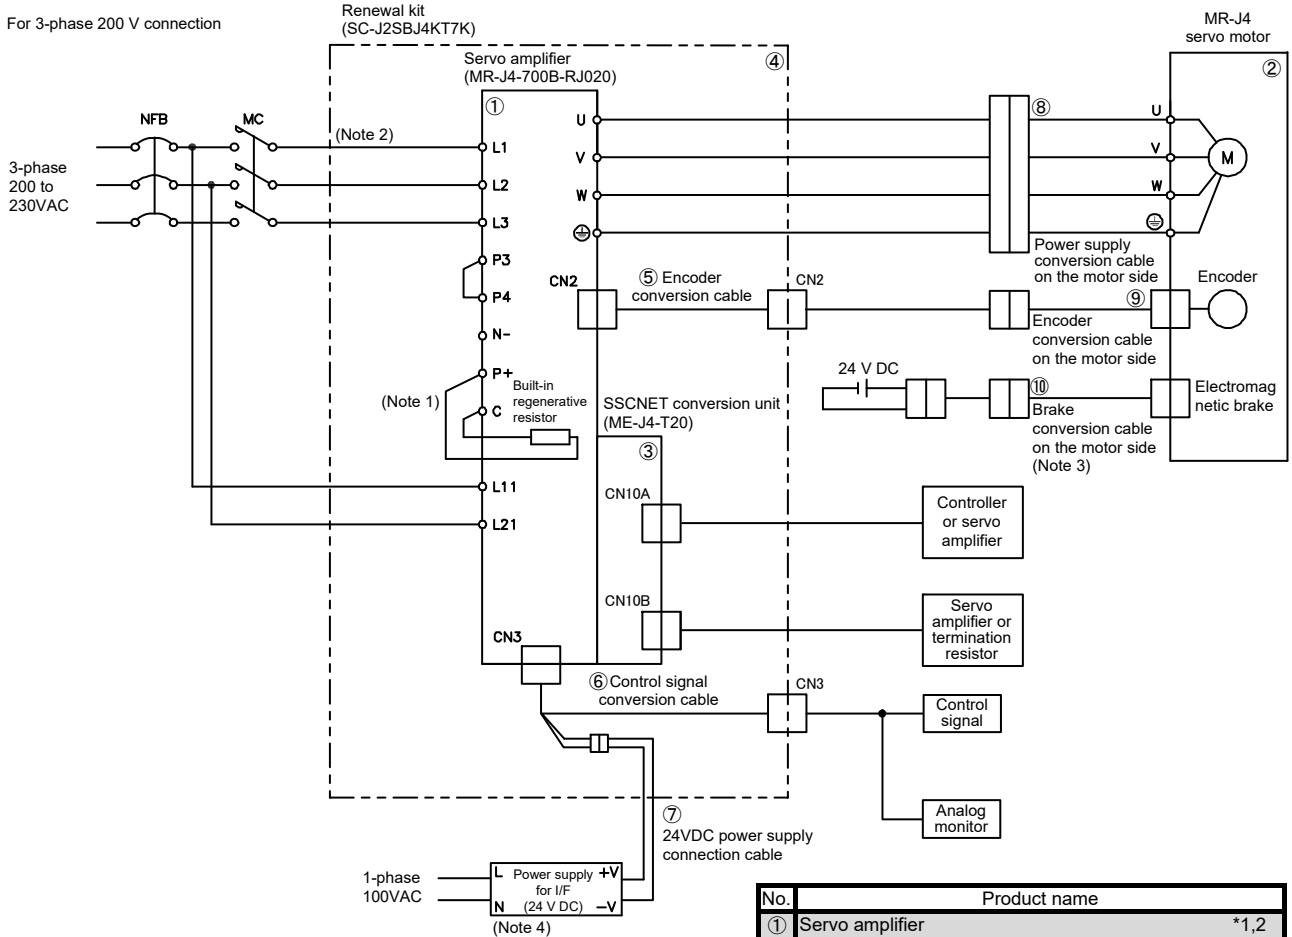

- Note 1. When using the regenerative option, make sure to remove the wiring for the regenerative resistor built in to the servo amplifier, and mount the regenerative option between P+ and C. Ensure the connection destinations are correct. The servo amplifier may malfunction if the connection destinations are incorrect.
- Note 2. There is no conversion terminal block in the SC-J2SBJ4KT7K renewal kit. Directly connect to the MR-J4 servo amplifier.
- Note 3. Required only when the internal power supply (24 V DC) for the I/F is used in the existing MR-J2S-\_B servo amplifier. Not included with the renewal tool. Note that a separate 24 V DC power supply (current capacity: 80 mA or more) is required when replacing.

When connecting the 24 V DC power supply, use the "24 V DC power supply connection cable (model: SC-J2SJ4CTPWC5M)" included in the package. (Electric wire colors: Red (+ side); white (- side))

# [Appendix 2] Introduction to Renewal Tool

(2) Secondary replacement (when replacing the servo motor after replacing the servo amplifier)/Simultaneous replacement (when replacing the servo amplifier and the servo motor simultaneously)

No.	Product name	
①	Servo amplifier	*1,2
②	Servo motor	*1
③	SSCNET conversion unit	*1,2
④	Renewal kit	*2
⑤	Encoder conversion cable	*2
⑥	Control signal conversion cable	*2
⑦	24 V DC power supply connection cable	*2
⑧	Power supply conversion cable on the motor side	
⑨	Encoder conversion cable on the motor side	
⑩	Brake conversion cable on the motor side	

\*1: Manufactured by Mitsubishi Electric.  
 \*2: For secondary replacement, replacement finished through the primary replacement

- Note 1. When using the regenerative option, make sure to remove the wiring for the regenerative resistor built in to the servo amplifier, and mount the regenerative option between P+ and C. Ensure the connection destinations are correct. The servo amplifier may malfunction if the connection destinations are incorrect.
- Note 2. There is no conversion terminal block in the SC-J2SBJ4KT7K renewal kit. Directly connect to the MR-J4 servo amplifier.
- Note 3. Unnecessary if electromagnetic brakes are not installed.
- Note 4. Required only when the internal power supply (24 V DC) for the I/F is used in the existing MR-J2S- B servo amplifier. Not included with the renewal tool. Note that a separate 24 V DC power supply (current capacity: 80 mA or more) is required when replacing.

When connecting the 24 V DC power supply, use the "24 V DC power supply connection cable (model: SC-J2S4CTPWC5M)" included in the package.  
 (Electric wire colors: Red (+ side); white (- side))

# [Appendix 2] Introduction to Renewal Tool

## 5.8 SC-J2SBJ4KT15K, 22K

### (1) Primary replacement (when replacing the servo amplifier only)

For 3-phase 200 V connection

No.	Product name	
①	Servo amplifier	*1
②	Servo motor	*1
③	SSCNET conversion unit	*1
④	Renewal kit	
⑤	Encoder conversion cable	
⑥	Control signal conversion cable	
⑦	24 V DC power supply connection cable	

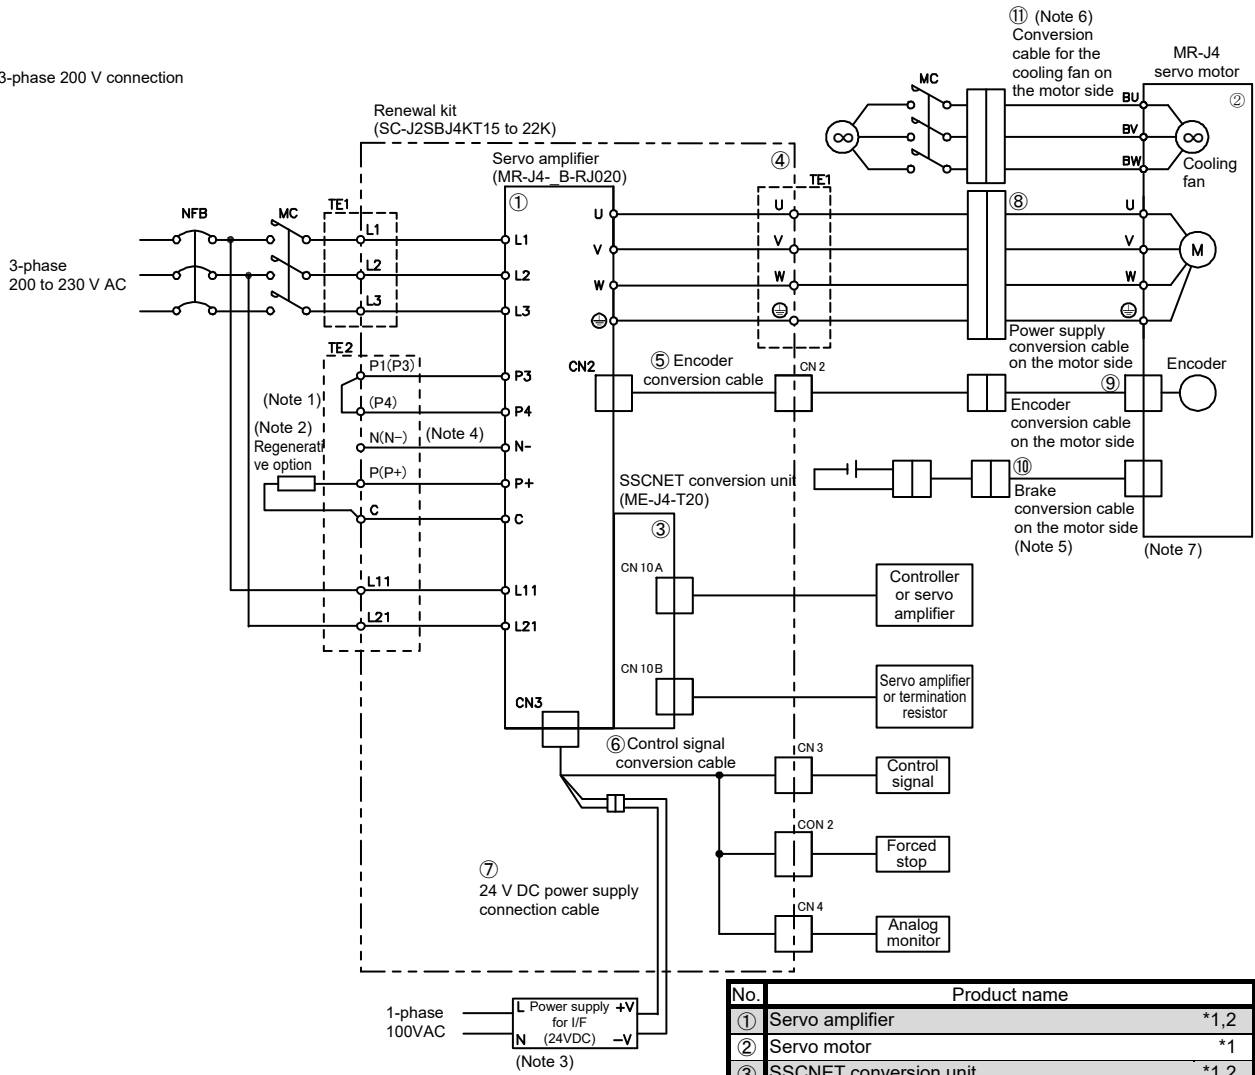

\*1: Manufactured by Mitsubishi Electric.

- Note
1. Make sure to connect between P3 and P4. When using the power factor improving DC reactor, remove the short circuit bar between P3 and P4 before connection.
  2. When using the regenerative option, make sure to mount the regenerative option between P+ and C. Ensure the connection destinations are correct. The servo amplifier may malfunction if the connection destinations are incorrect.
  3. Required only when the internal power supply (24 V DC) for the I/F is used in the existing MR-J2S-\_B servo amplifier. Not included with the renewal tool. Note that a separate 24 V DC power supply (current capacity: 80 mA or more) is required when replacing.  
When connecting the 24 V DC power supply, use the "24 V DC power supply connection cable (model: SC-J2SJ4CTPWC5M)" included in the package.  
(Electric wire colors: Red (+ side); white (- side))
  4. When connecting a power regenerative converter (FR-RC-\_K) and a brake unit (FR-BU2-\_K), connect between P+ and N-. Make sure to remove the built-in regenerative resistor or the regenerative option.

# [Appendix 2] Introduction to Renewal Tool

- (2) Secondary replacement (when replacing the servo motor after replacing the servo amplifier)/  
 Simultaneous replacement (when replacing the servo amplifier and the servo motor simultaneously)

For 3-phase 200 V connection

No.	Product name	
①	Servo amplifier	*1,2
②	Servo motor	*1
③	SSCNET conversion unit	*1,2
④	Renewal kit	*2
⑤	Encoder conversion cable	*2
⑥	Control signal conversion cable	*2
⑦	24 V DC power supply connection cable	*2
⑧	Power supply conversion cable on the motor side	
⑨	Encoder conversion cable on the motor side	
⑩	Brake conversion cable on the motor side	
⑪	Conversion cable for the cooling fan on the motor side	

\*1: Manufactured by Mitsubishi Electric.  
 \*2: For secondary replacement, replacement finished through the primary replacement

Note 1. Make sure to connect between P3 and P4. When using the power factor improving DC reactor, remove the short circuit bar between P3 and P4 before connection.

2. When using the regenerative option, make sure to mount the regenerative option between P+ and C. Ensure the connection destinations are correct. The servo amplifier may malfunction if the connection destinations are incorrect.

3. Required only when the internal power supply (24 V DC) for the I/F is used in the existing MR-J2S-\_A servo amplifier.  
Not included with the renewal tool. Note that a separate 24 V DC power supply (current capacity: 80 mA or more) is required when replacing.

When connecting the 24 V DC power supply, use the "24 V DC power supply connection cable (model: SC-J2SJ4CTPWC5M)" included in the package.

(Electric wire colors: Red (+ side); white (- side))

4. When connecting a power regenerative converter (FR-RC-\_K) and a brake unit (FR-BU2-\_K), connect between P+ and N-. Make sure to remove the built-in regenerative resistor or the regenerative option.

5. Unnecessary if electromagnetic brakes are not installed.

6. Required for the HG-JR22K1M motor only. There is no cooling fan for the HG-JR11K1M or HG-JR15K1M motor. Because the existing wiring becomes unnecessary, insulate as needed.

7. There is no cooling fan for the HG-JR11K1M or HG-JR15K1M motor. Because the existing wiring will become unnecessary, terminate the cables.

8. After replacing with the HG-JR22K1M, HG-JR30K1M, HG-JR37K1M, HG-JR45K1M or HG-JR55K1M motor, a new encoder cable is required to be laid. Contact Mitsubishi Electric System & Service Co., Ltd. if a new cable required.

\* When using an existing encoder cable, an alarm No. AL46.3 (thermistor disconnected error) occurs.

### 6. SPECIFICATIONS

#### 6.1 Standard Specifications

##### (1) Renewal kit specifications

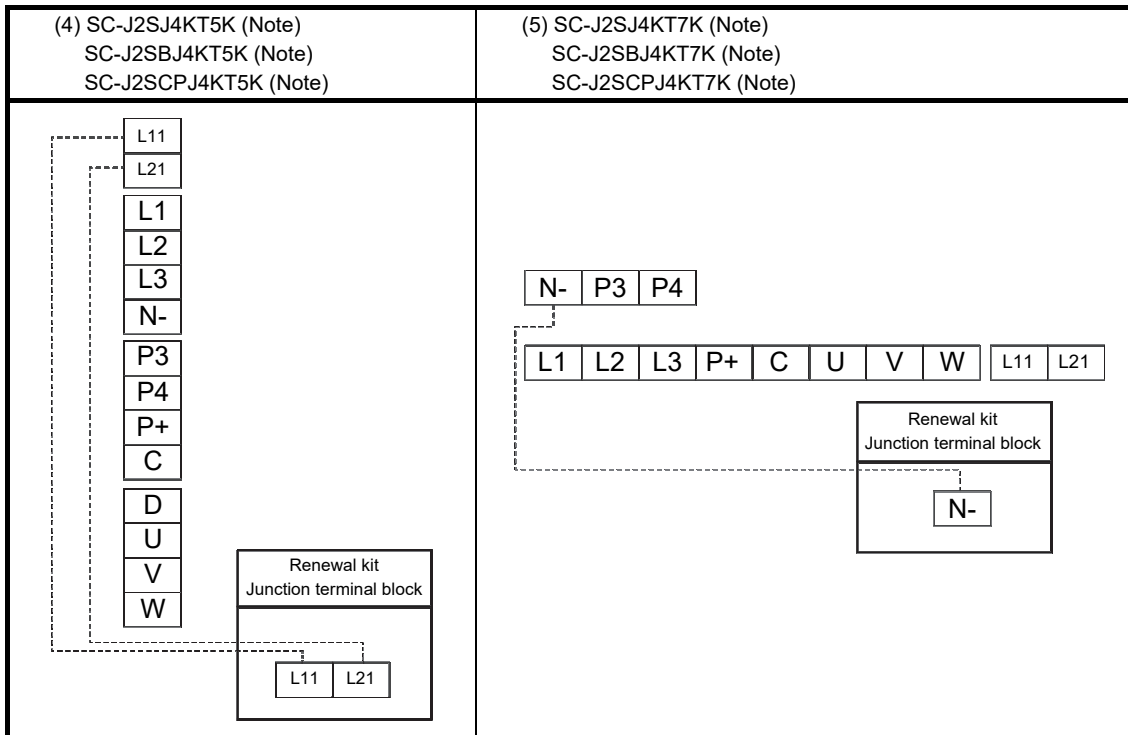

Item		Specifications	
Power supply	Voltage/Frequency (Note)	1-phase 100 V AC to 120 V AC, 50/60 Hz. 3-phase 200 V AC to 240 V AC, 50/60 Hz.	
	Permissible voltage fluctuation (Note)	1-phase 85 to 127 V 3-phase 170 V AC to 264 V AC.	
	Permissible frequency fluctuation	Within $\pm 5\%$ .	
Environment	Ambient temperature	Operation	0 to +55 °C (non-freezing).
		Storage	-20 to +65 °C (non-freezing).
	Ambient humidity	Operation	90% RH or less (non-condensing).
		Storage	
	Ambience	Indoors (no direct sunlight) and free from corrosive gas, flammable gas, oil mist, dust, and dirt	
	Altitude	1000 m or less above sea level.	
Vibration	5.9 m/s <sup>2</sup> or less, 10 to 55 Hz (Each direction of X, Y, and Z).		

Note: Exclude for 400 V, since a terminal block is not included with.

#### 6.2 Terminal Block Specifications

Note. The renewal kits for the MR-J2S-11K\_, MR-J2S-15K\_ and MR-J2S-22K\_ servo amplifiers have a different terminal position than the MR-J2S servo amplifier.

### 6.3 Recommended 24 V DC Power Supply Specifications for Interface

These are the recommended specifications for a 24 V DC power source for interface that is required for renewal.

Make a selection according to the following specifications.

Product name	Specifications
For interface	24 V DC ±10%
24 V DC power	Power capacity: 80 mA or more

## [Appendix 2] Introduction to Renewal Tool

### 7. PARAMETER SETTING

#### 7.1 List of General-Purpose Interface Setting Requisite Parameters

##### (1) For primary replacement

The following parameters are a minimum number of parameters that need to be set for primary replacement. Depending on the settings of the currently used servo amplifier, parameters other than these may need to be set. For details, **refer to Part 2 Section 3.6.**

Parameter number	Setting item	Setting value	Description
<b>Changing required.</b>			
PA04	Function selection A-1	0000h	Forced stop deceleration function selection To configure the same settings as those for MR-J2S, select "Forced stop deceleration function disabled (EM1)".
PC22	Function selection C-1	_ 1 _ _ h	Serial encoder selection. This setting is for communication with the encoder of MR-J2S. An incorrect setting causes encoder initial communication data error 1 (AL.20.1).
PA09	Auto Tuning Response	8	Auto tuning response setting When replacing, switch the power on after setting the parameter value to "8". <b>* It is necessary to make gain adjustment again when replacing.</b> The setting value of this parameter is equivalent to the slow response of the MR-J2S. Perform adjustment since the gain can be too low for the slow response. For details on how to make gain adjustments, refer to Chapter 6 of the MR-J4 Servo Amplifier Instruction Manual.
PD27	Output device selection 2 <b>* 11 kW or more, only when using this function</b>	0006h	Dynamic brake interlock (DB) selection When using this function for the MR-J2S servo amplifier of 11 kW or more, set the parameter. Assign a DB signal to pin CN1-48.
PD03 to PD14	Input signal device selection	-	When the assignment of the Input/output signal for the existing MR-J2S servo amplifier is changed, setting is required. For details, refer to Section 5.2 in "Manual for Replacement from MR-J2S Renewal Tool (X903120707)" issued by Mitsubishi Electric System & Service Co., Ltd.
<b>Position control mode only</b>			
PA06	Electronic gear numerator (CMX) (Command input pulse multiplication numerator)	8 (Note 1)	When using an electronic gear, it is necessary to change the setting value. <b>Set the same value as [Pr. 3] or [Pr. 4] of for the MR-J2S- A servo amplifier.</b>
PA07	Electronic gear denominator (CDV) (Commanded pulse multiplication denominator)	1 (Note 1)	
PA21	Electronic gear selection	0001h	A setting value for the electronic gear [Pr. PA06] or [Pr. PA07] becomes effective.
PA13	Command pulse input form	_ 2 _ _ h	Pulse train filter selection The setting value mentioned at the left side is a command pulse train filter setting equivalent to the MR-J2S- _A_ (when setting the differential line driver type). <b>* If it is not set, position mismatch will occur. Make sure to set a filter.</b> In addition, it is necessary to adjust the command pulse logic to the positioning module. For details, refer to Part 2 Section 3.7. <b>* An incorrect logic setting causes the servo motor to not rotate. Make sure to configure the settings.</b>
PA10	In-position range	100 (Note 2)	In-position range Used to set an in-position range per command pulse unit. <b>Set the same value as [Pr. 5] of for the MR-J2S- A servo amplifier.</b>
<b>Speed control mode only</b>			
PA01	Control mode	_ _ _ 2h	Select the servo amplifier control mode. Select the speed control mode.
PC12	Analog speed command - Maximum speed	3000 (Note 3)	Analog speed command - Maximum speed

- Note
1. The example value shown is for when the electronic gear setting of an existing servo amplifier is set as "8/1".
  2. The example value shown is for when the in-position range of an existing servo amplifier is set as "100".
  3. The example value shown is for when the servo amplifier setting of an existing servo amplifier is set as "3000".

## [Appendix 2] Introduction to Renewal Tool

### (2) For secondary replacement

The following parameters are a minimum number of parameters that need to be set for secondary replacement. Depending on the settings of the currently used servo amplifier, parameters other than these may need to be set. For details, **refer to Part 2 Section 3.6.**

Parameter number	Setting item	Setting value		Description
		Before changing (Note 1)	After changing	
Changing required.				
PC22	Function selection C-1	_ 1 _ _ h	_ 0 _ _ h	Serial encoder selection. This setting is for communication with the encoder of MR-J4. An incorrect setting causes encoder initial communication data error 1 (AL.20.1).
Position control mode only				
PA21	Electronic gear selection	0001h	3001h	J2S electronic gear setting value compatibility mode <b>* For [Pr. PA06] or [Pr. PA07], the value when performing the primary replacement is required to be maintained.</b> Magnify the electronic gear setting value by 32 times.
Speed control mode only				
PC12	Analog speed command - Maximum speed	0	3000	Analog speed command - Maximum speed The setting value at left is for when the HC-SFS53 motor is replaced with the HG-SR52 motor.
Torque control mode only				
PC12	Analog speed limit - Maximum speed	0	3000	Analog speed limit - Maximum speed The setting value at left is for when the HC-SFS53 motor is replaced with the HG-SR52 motor.
When using encoder output pulses				
PA15	Encoder output pulses	4 (Note 3)	128	Used to set the encoder pulses (A-phase and B-phase) output by the servo amplifier. An output pulse is required to be set.
PC19	Encoder output pulse setting selection	0 _ 1 _ h (Note 3)	1 _ 1 _ h	Encoder output pulse setting selection Used to set the encoder pulses output by the servo amplifier. The setting value at left is according to the dividing ratio setting.

- Note
1. Setting example at primary replacement.
  2. The value is for when the electronic gear setting of an existing servo motor (encoder resolution: 131072 pulses/rev) is "8/1".
  3. The value is for when the output pulse setting of an existing HC-KFS motor (encoder resolution: 131072 pulses/rev) is "Dividing ratio: 1/4".

## [Appendix 2] Introduction to Renewal Tool

### (3) For simultaneous replacement

The following parameters are a minimum number of parameters that need to be set for simultaneous replacement. Depending on the settings of the currently used servo amplifier, parameters other than these may need to be set. For details, **refer to Part 2 Section 3.6.**

Parameter number	Setting item	Setting value	Description
<b>Changing required.</b>			
PA04	Function selection A-1	0000h	Forced stop deceleration function selection To configure the same settings as those for MR-J2S, select "Forced stop deceleration function disabled (EM1)".
PA09	Auto Tuning Response	8	Auto tuning response setting When replacing, switch the power on after setting the parameter value to "8". <b>* It is necessary to make gain adjustment again when replacing.</b> The setting value of this parameter is equivalent to the slow response of the MR-J2S. Perform adjustment since the gain can be too low for the slow response. For details on how to make gain adjustments, refer to Chapter 6 of the MR-J4 Servo Amplifier Instruction Manual.
PD27	Output device selection 2 <b>* 11 kW or more, only when using this function</b>	0006h	Dynamic brake interlock (DB) selection When using this function for the MR-J2S servo amplifier of 11 kW or more, set the parameter. Assign a DB signal to pin CN1-48.
PD03 to 14	Input signal device selection	-	When the assignment of the Input/output signal for the existing MR-J2S servo amplifier, setting is required. For details, refer to Part 2 Section 3.6.
<b>Position control mode only</b>			
PA06	Electronic gear numerator (CMX) (Command input pulse multiplication numerator)	8 (Note 1)	When using an electronic gear, it is necessary to change the setting value. <b>Set the same value as [Pr. 3] or [Pr. 4] of for the MR-J2S- A servo amplifier.</b>
PA07	Electronic gear denominator (CDV) (Commanded pulse multiplication denominator)	1 (Note 1)	
PA21	Electronic gear selection	3001h	J2S electronic gear setting value compatibility mode Magnify the electronic gear setting value by 32 times.
PA13	Command pulse input form	_ 2 _ _ h	Pulse train filter selection The setting value mentioned at the left side is a command pulse train filter setting equivalent to the MR-J2S- _A_ (when setting the differential line driver type). <b>* If it is not set, position mismatch will occur. Make sure to set a filter.</b> In addition, it is necessary to adjust the command pulse logic to the positioning module. For details, refer to Part 2 Section 3.7. <b>* An incorrect logic setting causes the servo motor to not rotate. Make sure to configure the settings.</b>
PA10	In-position range	100 (Note 2)	In-position range Used to set an in-position range per command pulse unit. <b>Set the value of [Pr. 5] for the MR-J2S- A servo amplifier in this parameter as well.</b>
<b>Speed control mode only</b>			
PA01	Control mode	_ _ _ 2h	Select the servo amplifier control mode. Select the speed control mode.
PC12	Analog speed command - Maximum speed	3000	Analog speed command - Maximum speed The setting value at left is for when the HC-SFS53 motor is replaced with the HG-SR52 motor.
<b>Torque control mode only</b>			
PA01	Control mode	_ _ _ 4h	Select the servo amplifier control mode. Select the torque control mode.
PC12	Analog speed limit - Maximum speed	3000	Analog speed limit - Maximum speed The setting value at left is for when the HC-SFS53 motor is replaced with the HG-SR52 motor.
PC13	Analog torque command maximum output	100	Analog torque command maximum output <b>Set the same value as for the MR-J2S- A servo amplifier.</b>
<b>When using encoder output pulses</b>			
PA15	Encoder output pulses	128 (Note 3)	Used to set the encoder pulses (A-phase and B-phase) output by the servo amplifier.
PC19	Encoder output pulse setting selection	0 _ 1 _ h (Note 3)	Encoder output pulse setting selection Used to set the encoder pulses output by the servo amplifier. The setting value at left is according to the dividing ratio setting.

- Note
1. The example value shown is for when the electronic gear setting of an existing servo amplifier is set as "8/1".
  2. The example value shown is for when the in-position range of an existing servo amplifier is set as "100".
  3. The example value shown is for when the output pulse setting of an existing HC-KFS motor (encoder resolution: 131072 pulses/rev) is "Dividing ratio: 1/4".

## [Appendix 2] Introduction to Renewal Tool

### 7.2 List of SSCNET Interface Setting Requisite Parameters

POINT
<p>● When the MR-J4-_B-RJ020 servo amplifier is combined with the MR-J4-T20 SSCNET conversion unit, the servo amplifier is recognized as MR-J2S by the controller. For parameters, changes to the program or the parameters are required as necessary. (For details, refer to "[Appendix 1] Summary of MR-J4-_B_-RJ020 + MR-J4-T20" in this document.)</p> <p>● For details on how to set parameters, refer to <b>Chapter 5 of the "MR-J4- B - RJ020 Servo Amplifier Instruction Manual (SH(NA)030124)".</b></p>

### 7.3 List of Built-in Positioning Function Setting Requisite Parameters

#### (1) For primary replacement

The parameters shown below are a minimum number of parameters that need to be set for primary replacement. Depending on the settings of the currently used servo amplifier, parameters other than these may need to be set. For details, **refer to Part 4 Section 3.6.**

Parameter number	Setting item	Setting value	Description
Changing required.			
PA01	Control mode	___ 6h	Select the servo amplifier control mode. Select the positioning mode (point table method).
PA04	Function selection A-1	0000h	Forced stop deceleration function selection To configure the same settings as those for MR-J2S, select "Forced stop deceleration function disabled (EM1)".
PC22	Function selection C-1	_ 1 __ h	Serial encoder selection. This setting is for communication with the encoder of MR-J2S. An incorrect setting causes encoder initial communication data error 1 (AL.20.1).
PA09	Auto Tuning Response	8	Auto tuning response setting When replacing, switch the power on after setting the parameter value to "8". <b>* It is necessary to make gain adjustment again when replacing.</b> The setting value of this parameter is equivalent to the slow response of the MR-J2S. Perform adjustment since the gain can be too low for the slow response. For details on how to make gain adjustments, refer to Chapter 6 of the MR-J4 Servo Amplifier Instruction Manual.
PA06	Electronic gear numerator (CMX) (Command input pulse multiplication numerator)	8 (Note 1)	When using an electronic gear, it is necessary to change the setting value. <b>Set the same value as [Pr. 4] and [Pr. 5] of for the MR-J2S- CP servo amplifier.</b>
PA07	Electronic gear denominator (CDV) (Commanded pulse multiplication denominator)	1 (Note 1)	
PA21	Electronic gear selection	0001h	A setting value for the electronic gear [Pr. PA06] or [Pr. PA07] becomes effective.
PA10	In-position range	100 (Note 2)	In-position range Used to set an in-position range per command pulse unit. <b>Set the same value as [Pr. 6] of for the MR-J2S- CP servo amplifier.</b>
PA15	Encoder output pulses	4 (Note 3)	Used to set the encoder pulses (A-phase and B-phase) output by the servo amplifier.
PC19	Encoder output pulse setting selection	0 _ 1 _ h (Note 3)	Encoder output pulse setting selection Used to set the encoder pulses output by the servo amplifier. The setting value at left is according to the dividing ratio setting.
PD01	Input signal automatic on selection	1 ___ h	When the EMG signal of the existing MR-J2S-CP servo amplifier has not been assigned, enable automatic on of the forced stop signal after replacement. An incorrect setting causes Servo forced stop warning (AL. E6.1).
PD04 to 28	Input signal device selection	-	When the assignment of the Input/output signal for the existing MR-J2S servo amplifier, setting is required. For details, refer to Part 4 Section 3.6.

- Note
1. The example value shown is for when the electronic gear setting of an existing servo amplifier is set as "8/1".
  2. The example value shown is for when the in-position range of an existing servo amplifier is set as "100".
  3. The example value shown is for when the output pulse setting of an existing HC-KFS motor (encoder resolution: 131072 pulses/rev) is "Dividing ratio: 1/4".

## [Appendix 2] Introduction to Renewal Tool

### (2) For secondary replacement

The parameters shown in this section are a minimum number of parameters that need to be set for secondary replacement. Depending on the settings of the currently used servo amplifier, parameters other than these may need to be set. For details, **refer to Part 4 Section 3.6.**

Parameter number	Setting item	Setting value		Description
		Before changing (Note 1)	After changing	
Changing required.				
PC22	Function selection C-1	_ 1 _ _ h	_ 0 _ _ h	Serial encoder selection. This setting is for communication with the encoder of MR-J4. An incorrect setting causes encoder initial communication data error 1 (AL.20.1).
PA21	Electronic gear selection	0001h	3001h	J2S electronic gear setting value compatibility mode <b>* For [Pr. PA06] or [Pr. PA07], the value when performing the primary replacement is required to be maintained.</b> Magnify the electronic gear setting value by 32 times.
PA10	In-position range	100	3200	Set the range of droop pulses occurred when outputting a positioning completion signal (INP). <b>Set the value as magnified by 32 times of the parameter No. 6 for the MR-J2S-CP servo amplifier.</b>
PA15	Encoder output pulses	4 (Note 3)	128	Used to set the encoder pulses (A-phase and B-phase) output by the servo amplifier. An output pulse is required to be set.
PC19	Encoder output pulse setting selection	0 _ 1 _ h (Note 3)	1 _ 1 _ h	Encoder output pulse setting selection Used to set the encoder pulses output by the servo amplifier. The setting value at left is according to the dividing ratio setting.

Note 1. Setting example at primary replacement.

2. The value is for when the electronic gear setting of an existing servo motor (encoder resolution: 131072 pulses/rev) is "8/1".
3. The example value shown is for when the output pulse setting of an existing HC-KFS motor (encoder resolution: 131072 pulses/rev) is "Dividing ratio: 1/4".

## [Appendix 2] Introduction to Renewal Tool

### (3) For simultaneous replacement

The parameters shown below are a minimum number of parameters that need to be set for simultaneous replacement. Depending on the settings of the currently used servo amplifier, parameters other than these may need to be set. For details, **refer to Part 4 Section 3.6.**

Parameter number	Setting item	Setting value	Description
Changing required.			
PA01	Control mode	___6h	Select the servo amplifier control mode. Select the positioning mode (point table method).
PA04	Function selection A-1	0000h	Forced stop deceleration function selection To configure the same settings as those for MR-J2S, select "Forced stop deceleration function disabled (EM1)".
PA09	Auto Tuning Response	8	Auto tuning response setting When replacing, switch the power on after setting the parameter value to "8". <b>* It is necessary to make gain adjustment again when replacing.</b> The setting value of this parameter is equivalent to the slow response of the MR-J2S. Perform adjustment since the gain can be too low for the slow response. For details on how to make gain adjustments, refer to Chapter 6 of the MR-J4-_A_ Servo Amplifier Instruction Manual.
PA06	Electronic gear numerator (CMX) (Command input pulse multiplication numerator)	8 (Note 1)	When using an electronic gear, it is necessary to change the setting value. <b>Set the same value as [Pr. 3] or [Pr. 4] of for the MR-J2S- A servo amplifier.</b>
PA07	Electronic gear denominator (CDV) (Commanded pulse multiplication denominator)	1 (Note 1)	
PA21	Electronic gear selection	3001h	J2S electronic gear setting value compatibility mode Magnify the electronic gear setting value by 32 times.
PA10	In-position range	3200 (Note 2)	In-position range Used to set an in-position range per command pulse unit. <b>Set the value of [Pr. 6] for the MR-J2S- CP servo amplifier in this parameter as well.</b>
PA15	Encoder output pulses	128 (Note 3)	Used to set the encoder pulses (A-phase and B-phase) output by the servo amplifier.
PC19	Encoder output pulse setting selection	0_1_h (Note 3)	Encoder output pulse setting selection Used to set the encoder pulses output by the servo amplifier. The setting value at left is according to the dividing ratio setting.
PD01	Input signal automatic on selection	1___h	When the EMG signal of the existing MR-J2S-CP servo amplifier has not been assigned, enable automatic on of the forced stop signal after replacement. An incorrect setting causes Servo forced stop warning (AL. E6.1).

- Note
1. The example value shown is for when the electronic gear setting of an existing servo amplifier is set as "8/1".
  2. The example value shown is for when the in-position range of an existing servo amplifier is set as "100".
  3. The example value shown is for when the output pulse setting of an existing HC-KFS motor (encoder resolution: 131072 pulses/rev) is "Dividing ratio: 1/4".

# [Appendix 2] Introduction to Renewal Tool

## 8. DIMENSIONS

### 8.1 Renewal Kit

The dimensions are the same for general-purpose interface, SSCNET interface, and built-in positioning function.

- (1) SC-J2SJ4KT02K
- SC-J2SBJ4KT02K
- SC-J2SCPJ4KT02K

Note 1. The above dimensions are for when MR-BAT6V1SET has been mounted. Note that MR-BAT6V1BJ cannot be mounted.  
 Note 2. Wiring and other items in the renewal kit are not drawn so that mounting method can be easily seen.

# [Appendix 2] Introduction to Renewal Tool

- (2) SC-J2SJ4KT06K
- SC-J2SBJ4KT06K
- SC-J2SCPJ4KT06K

- Note 1. The above dimensions are for when MR-BAT6V1SET has been mounted. Note that MR-BAT6V1BJ cannot be mounted.
- Note 2. Wiring and other items in the renewal kit are not drawn so that mounting method can be easily seen.

# [Appendix 2] Introduction to Renewal Tool

- (3) SC-J2SJ4KT1K
- SC-J2SBJ4KT1K
- SC-J2SCPJ4KT1K

Unit [mm]

- Note 1. The above dimensions are for when MR-BAT6V1SET has been mounted. Note that MR-BAT6V1BJ cannot be mounted.
- Note 2. Wiring and other items in the renewal kit are not drawn so that mounting method can be easily seen.

# [Appendix 2] Introduction to Renewal Tool

- (4) SC-J2SJ4KT3K
- SC-J2SBJ4KT3K
- SC-J2SCPJ4KT3K

Unit [mm]

- Note
1. The above dimensions are for when MR-BAT6V1SET has been mounted. Note that MR-BAT6V1BJ cannot be mounted.
  2. Wiring and other items in the renewal kit are not drawn so that mounting method can be easily seen.

# [Appendix 2] Introduction to Renewal Tool

- (5) SC-J2SJ4KT5K
- SC-J2SBJ4KT5K
- SC-J2SCPJ4KT5K

Note. Wiring and other items in the renewal kit are not drawn so that mounting method can be easily seen.

# [Appendix 2] Introduction to Renewal Tool

- (6) SC-J2SJ4KT7K
- SC-J2SBJ4KT7K
- SC-J2SCPJ4KT7K

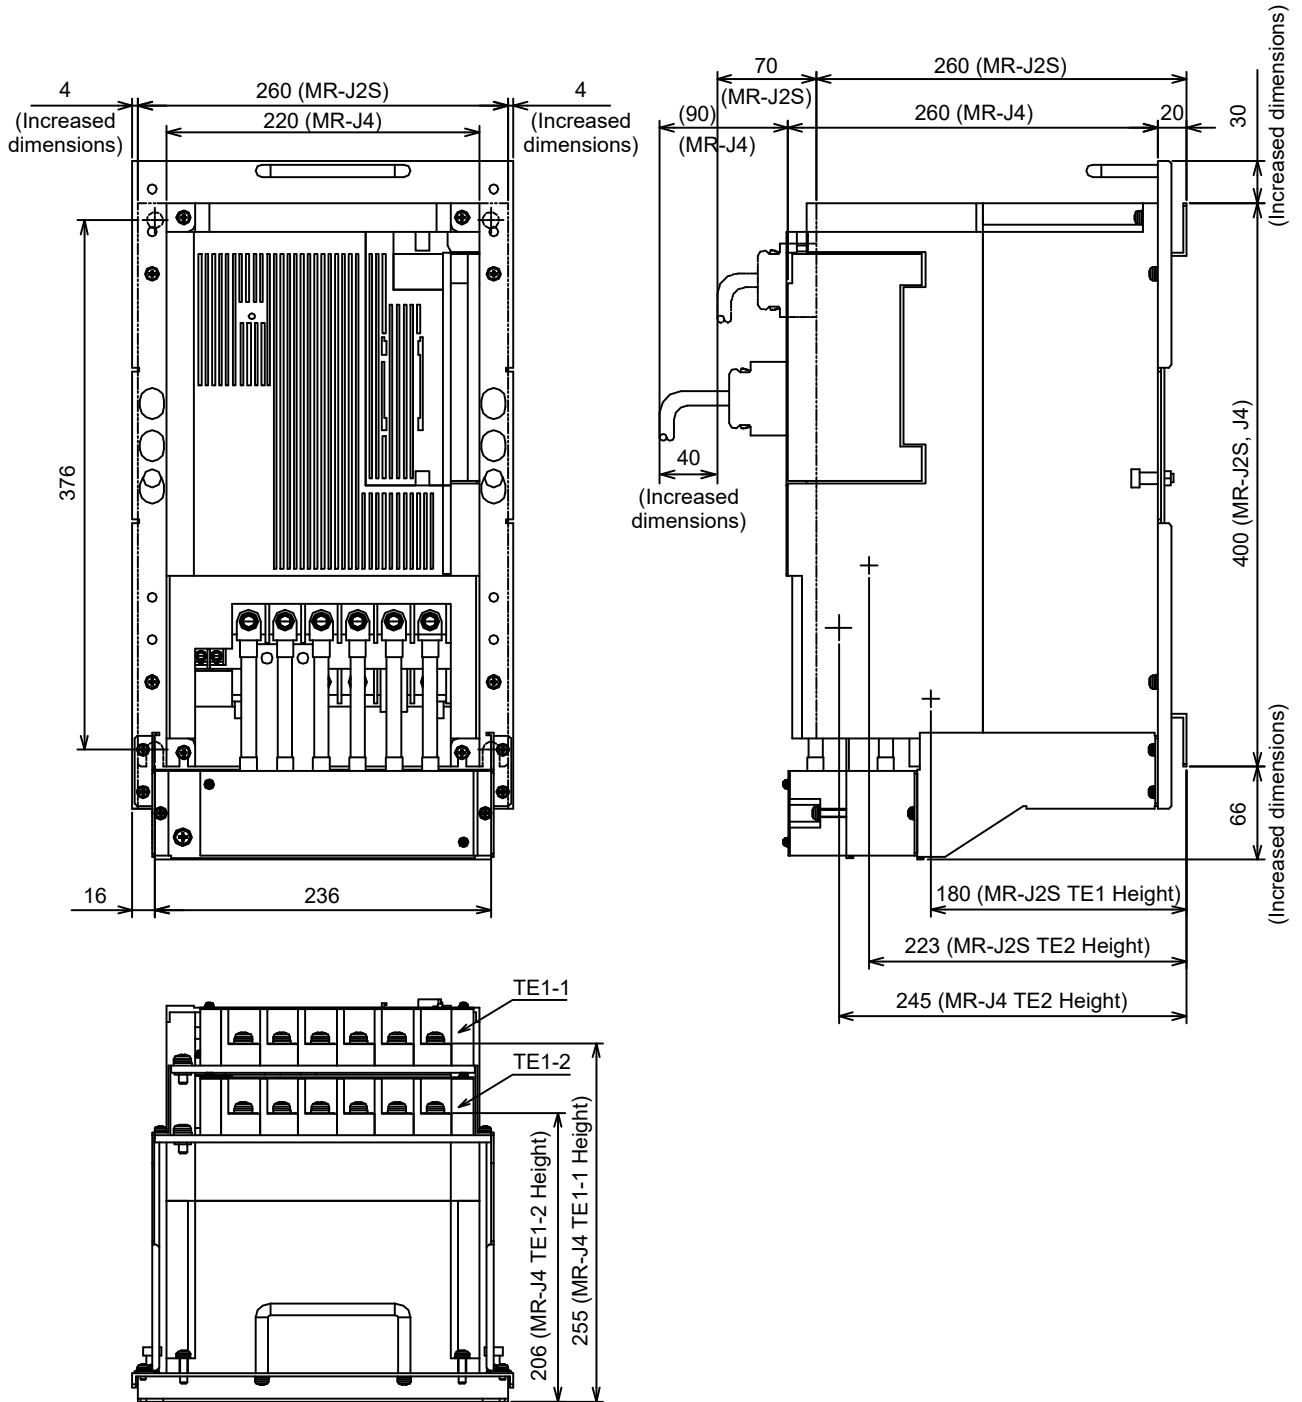

Note. Wiring and other items in the renewal kit are not drawn so that mounting method can be easily seen.

# [Appendix 2] Introduction to Renewal Tool

(7) SC-J2SJ4KT15K  
 SC-J2SBJ4KT15K

Unit [mm]

Note. A renewal kit is not compatible with a heat sink outside mounting attachment of the MR-J2S servo amplifier.

# [Appendix 2] Introduction to Renewal Tool

- (8) SC-J2SJ4KT22K  
SC-J2SBJ4KT22K

Unit [mm]

Note. A renewal kit is not compatible with a heat sink outside mounting attachment of the MR-J2S servo amplifier.

# [Appendix 2] Introduction to Renewal Tool

## (9) SC-J2SJ4BS01

Unit [mm]

Note 1: When the battery is mounted

# [Appendix 2] Introduction to Renewal Tool

(10) SC-J2SJ4BS02

Unit [mm]

Note 1: When the battery is mounted

## Warranty

### 1. Warranty period and coverage

We will repair any failure or defect hereinafter referred to as "failure" in our FA equipment hereinafter referred to as the "Product" arisen during warranty period at no charge due to causes for which we are responsible through the distributor from which you purchased the Product or our service provider. However, we will charge the actual cost of dispatching our engineer for an on-site repair work on request by customer in Japan or overseas countries. We are not responsible for any on-site readjustment and/or trial run that may be required after a defective unit are repaired or replaced.

### [Term]

For terms of warranty, please contact your original place of purchase.

### [Limitations]

- (1) You are requested to conduct an initial failure diagnosis by yourself, as a general rule.  
It can also be carried out by us or our service company upon your request and the actual cost will be charged. However, it will not be charged if we are responsible for the cause of the failure.
- (2) This limited warranty applies only when the condition, method, environment, etc. of use are in compliance with the terms and conditions and instructions that are set forth in the instruction manual and user manual for the Product and the caution label affixed to the Product.
- (3) Even during the term of warranty, the repair cost will be charged on you in the following cases;
  - (i) a failure caused by your improper storing or handling, carelessness or negligence, etc., and a failure caused by your hardware or software problem
  - (ii) a failure caused by any alteration, etc. to the Product made on your side without our approval
  - (iii) a failure which may be regarded as avoidable, if your equipment in which the Product is incorporated is equipped with a safety device required by applicable laws and has any function or structure considered to be indispensable according to a common sense in the industry
  - (iv) a failure which may be regarded as avoidable if consumable parts designated in the instruction manual, etc. are duly maintained and replaced
  - (v) any replacement of consumable parts (battery, fan, smoothing capacitor, etc.)
  - (vi) a failure caused by external factors such as inevitable accidents, including without limitation fire and abnormal fluctuation of voltage, and acts of God, including without limitation earthquake, lightning and natural disasters
  - (vii) a failure generated by an unforeseeable cause with a scientific technology that was not available at the time of the shipment of the Product from our company
  - (viii) any other failures which we are not responsible for or which you acknowledge we are not responsible for

### 2. Term of warranty after the stop of production

- (1) We may accept the repair at charge for another seven (7) years after the production of the product is discontinued. The announcement of the stop of production for each model can be seen in our Sales and Service, etc.
- (2) Please note that the Product (including its spare parts) cannot be ordered after its stop of production.

### 3. Service in overseas countries

Our regional FA Center in overseas countries will accept the repair work of the Product. However, the terms and conditions of the repair work may differ depending on each FA Center. Please ask your local FA center for details.

### 4. Exclusion of loss in opportunity and secondary loss from warranty liability

Regardless of the gratis warranty term, Mitsubishi shall not be liable for compensation to:

- (1) Damages caused by any cause found not to be the responsibility of Mitsubishi.
- (2) Loss in opportunity, lost profits incurred to the user by Failures of Mitsubishi products.
- (3) Special damages and secondary damages whether foreseeable or not, compensation for accidents, and compensation for damages to products other than Mitsubishi products.
- (4) Replacement by the user, maintenance of on-site equipment, start-up test run and other tasks.

### 5. Change of Product specifications

Specifications listed in our catalogs, manuals or technical documents may be changed without notice.

### 6. Application and use of the Product

- (1) For the use of our AC Servo, its applications should be those that may not result in a serious damage even if any failure or malfunction occurs in AC Servo, and a backup or fail-safe function should operate on an external system to AC Servo when any failure or malfunction occurs.
- (2) Our AC Servo is designed and manufactured as a general purpose product for use at general industries.  
Therefore, applications substantially influential to the public interest for such as atomic power plants and other power plants of electric power companies, and also which require a special quality assurance system, including applications for railway companies and government or public offices are not recommended, and we assume no responsibility for any failure caused by these applications when used  
In addition, applications which may be substantially influential to human lives or properties for such as airlines, medical treatments, railway service, incineration and fuel systems, man-operated material handling equipment, entertainment machines, safety machines, etc. are not recommended, and we assume no responsibility for any failure caused by these applications when used.  
We will review the acceptability of the abovementioned applications, if you agree not to require a specific quality for a specific application. Please contact us for consultation.
