Technical Data

Part numbers with rod end bracket and/or pivot bracket available

Not necessary to order a bracket for the applicable cylinder separately

Note) Mounting bracket is shipped together with the product, but not assembled.

Example) **MDB****D**-40-100Z-**N V**-M9BW

● Mounting type

Pivot bracket

Nil	No bracket
N	Pivot bracket is shipped together with the product, but not assembled.

* Applicable to only D (Double clevis) and T (Center trunnion) mounting types.

Double clevis

Center trunnion

Rod end bracket

Nil	No bracket
V	Single knuckle joint
W	Double knuckle joint

With rod end bracket

V: Single knuckle joint **W:** Double knuckle joint

Various mounting bracket options

- Suitable mounting brackets can be selected for the installation condition.
- Improved amount of mounting freedom

N: Double clevis pivot bracket

Lightweight

Reduced weight by changing the shape of the rod cover and head cover.

Bore size [mm]	MB	Reduction rate [%]	Current model [kg]
32	0.66	8	0.72
40	0.91	10	1.01
50	1.56	9	1.71
63	1.83	9	2.01
80	3.25	9	3.57
100	4.48	7	4.82
125	6.90	0	6.90

* At 100 stroke

Applicable speed/load

- Piston speed: Max. **1000** mm/s (ø32 to ø125)
- Load yield: See table below.

Bore size [mm]	Maximum load mass [kg]
32	80
40	140
50	190
63	310
80	500
100	800
125	1300

* Speed: 200 mm/s

Mounting dimensions are the same as the current product.

No environmental hazardous substances used
Lead free bushing is used as sliding material. Compliant with EU RoHS directive.

Various switches such as compact auto switches and magnetic field resistant auto switches can be mounted.

Compact auto switches

- D-M9
- D-A9

Magnetic field resistant auto switches

- D-P3DWA

*1 Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance.
A water resistant type cylinder is recommended for use in an environment which requires water resistance.

* Lead wire length symbols: 0.5 m.....Nil (Example) M9NW 3 m.....L (Example) M9NWL
1 m.....M (Example) M9NWM 5 m.....Z (Example) M9NZ

* Solid state auto switches marked with "○" are produced upon receipt of order.

* Since there are other applicable auto switches than listed above, refer to page 432 for details.

* The D-A9□/M9□/P3DWA□ auto switches are shipped together, (but not assembled). (However, auto switch mounting brackets are assembled for the D-A9□/M9□ before shipment.)

Note 1) Manufacture of intermediate strokes is possible. (Spacers are not used.)

Note 2) Applicable strokes should be confirmed according to the usage. For details, refer to "Air Cylinders Model Selection" on front matter pages. In addition, the products that exceed the stroke range ① might not be able to fulfill the specifications due to the deflection etc.

Note 3) Please consult with SMC for manufacturability and the part numbers when exceeding the stroke range ②.

Note 4) The stroke range with rod boot is up to 1000 mm. Please consult with SMC when exceeding 1000 mm strokes.

Note 5) Using a stroke of a length which is smaller than the effective cushion length may result in reduced air cushion performance. Refer to "Technical Data 1" on page 1901 for details on the effective cushion length.

Rod Boot Material

Symbol	Material	Max. ambient temp.
J	Nylon tarpaulin	70°C
K	Heat resistant tarpaulin	110°C*

* Max. ambient temperature for rod boot itself.

Allowable Kinetic Energy

Example) Load limit at rod end when the air cylinder ø63 is actuated at 500 mm/s.

Extend upward from 500 mm/s on the horizontal axis of the graph to the intersection point with the line for a tube bore size of 63 mm, and then extend leftward from this point to find the load of 80 kg.

Calculation

Example) **MBB32-100Z** (Basic, ø32, 100 stroke)

- Basic weight 0.44 (Basic, ø32)
 - Additional weight 0.11/50 stroke
 - Cylinder stroke 100 stroke
- 0.44 + 0.11 x 100/50 = **0.66 kg**

* Seal kits consist of items 14, 15, 16, 18, and can be ordered by using the seal kit number corresponding to each bore size.

* Center trunnion type should not be disassembled. (Refer to page 434.)

* The seal kit includes a grease pack (10 g for ø32 to ø50, 20 g for ø63 and ø80, 30 g for ø100 and ø125).

Order with the following part number when only the grease pack is needed.

Grease pack part number: GR-S-010 (10 g), **GR-S-020** (20 g)

Water Resistant Air Cylinder

Water resistant air cylinders are also available in the MB series, which are suitable for use on machine tools, where exposure to coolant is possible and applicable for food machinery and automobile washing equipment in an environment where water splashes. Please refer to page 1125 for more information.

- *1 The cover shape is the same as the current product.
- *2 ø125 only
- *3 Except ø125

For special port location (-XC3), the mounting bracket and port location can be determined using the standard product corresponding to the operating conditions. Also, this is only applicable to -XC3BB, -XC3CC and -XC3DD with trunnion bracket.

For parts made of stainless steel (-XC6), use the same specification stainless steel with the surface treatment (with hard chrome plated piston rod) (-XC68).

Refer to pages 425 to 432 for cylinders with auto switches.

Water Resistant Air Cylinder

Water resistant air cylinders are also available in the MB series, which are suitable for use on machine tools in an atmosphere with coolant and applicable to food machinery and automobile washing equipment in an environment with water splashes. Please refer to page 1125 for more information.

Specifications

Bore size [mm]	32	40	50	63	80	100	125
Action	Double acting, Double rod						
Fluid	Air						
Proof pressure	1.5 MPa						
Max. operating pressure	1.0 MPa						
Min. operating pressure	0.05 MPa						
Ambient and fluid temperature	Without auto switch: -10 to 70°C (No freezing) With auto switch: -10 to 60°C						
Lubrication	Not required (Non-lube)						
Operating piston speed	50 to 1000 mm/s						50 to 700 mm/s
Allowable stroke tolerance	Up to 250: $^{+1.0}_0$, 251 to 1000: $^{+1.4}_0$, 1001 to 1500						
Cushion ^(Note)	Air cushion or Rubber bumper						
Port size (Rc, NPT, G)	1/8	1/4	3/8	1/2			
Mounting	Basic, Axial foot, Rod flange, Center trunnion						

Note) Kinetic energy absorbable by the cushion mechanism is identical to double acting, single rod.

Note 1) Manufacture of intermediate strokes is possible. (Spacers are not used.)

Note 2) Applicable strokes should be confirmed according to the usage. For details, refer to "Air Cylinders Model Selection" on front matter pages. In addition, the products that exceed the stroke range ① might not be able to fulfill the specifications due to the deflection etc.

Note 3) Please consult with SMC for manufacturability and the part numbers when exceeding the stroke range ②. Note 4) The stroke range with rod boot is up to 1000 mm. Please consult with SMC when exceeding 1000 mm strokes. Note 5) Using a stroke of a length which is smaller than the effective cushion length may result in reduced air cushion performance. Refer to "Technical Data 1" on page 1901 for details on the effective cushion length.

- * Seal kits consist of items ①, ⑫, ⑬, ⑮, and can be ordered by using the seal kit number corresponding to each bore size.
- * Trunnion type should not be disassembled. (Refer to page 434.)
- * The seal kit includes a grease pack (10 g for ø32 to ø50, 20 g for ø63 and ø80, 30 g for ø100 and ø125).
- Order with the following part number when only the grease pack is needed.
Grease pack part number: GR-S-010 (10 g), **GR-S-020** (20 g)

Cylinder stroke [mm]

Refer to "Standard Strokes" on page 409.

* Only for D and T mounting types.
* Pivot bracket is shipped together with the product.
* For details, refer to page 400.* Since the bumpers are attached to the both sides of the piston for rubber bumper type, the overall length is longer than the cylinder with air cushion as follows: ø32, ø40: +6 mm, ø50, ø63: +8 mm, ø80, ø100: +10 mm.
* A knuckle joint pin is not provided with the single knuckle joint.
* Rod end bracket is shipped together with the product.
* The screw-in amount of the piston rod end cannot be adjusted when a clevis bracket, trunnion bracket and knuckle joint are used together.

*1 Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance.
A water resistant type cylinder is recommended for use in an environment which requires water resistance.

* Seal kits consist of items 14, 15, 16, 18, and can be ordered by using the seal kit number corresponding to each bore size.
* Seal kit includes a grease pack (ø32 to 50: 10 g, ø63, 80: 20 g, ø100: 30 g). Order with the following part number when only the grease pack is needed.
Grease pack part number: GR-S-010 (10 g), GR-S-020 (20 g)

* Model without air cushion is designed to include rubber bumpers. The overall length is longer than the cylinder with air cushion as follows because the bumpers are attached to the both sides of the piston;
ø32, ø40: +6 mm, ø50, ø63: +8 mm, ø80, ø100: +10 mm

Symbol	Specifications
-XC3	Special port location*
-XC7	Tie-rod, cushion valve, tie-rod nut, etc. made of stainless steel

* The cover shape is the same as the current product.

For special port location (-XC3), the mounting bracket and port location can be determined using the standard product corresponding to the operating conditions. Also, this is only applicable to -XC3BB, -XC3CC and -XC3DD with trunnion bracket.

Note 1) Manufacture of intermediate strokes is possible. (Spacers are not used.)

Note 2) Using a stroke of a length which is smaller than the effective cushion length may result in reduced air cushion performance. Refer to "Technical Data 1" on page 1901 for details on the effective cushion length.

*1 Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance.

Please contact SMC regarding water resistant types with the above model numbers.

* Lead wire length symbols: 0.5 m..... Nil (Example) M9NW 3 m..... L (Example) M9NWL
1 m..... M (Example) M9NWM 5 m..... Z (Example) M9NWZ

* Solid state auto switches marked with "○" are produced upon receipt of order.

* Since there are other applicable auto switches than listed above, refer to page 432 for details.

* The D-A9□/M9□/P3DWA□A auto switches are shipped together, (but not assembled). (However, auto switch mounting brackets are assembled for the D-A9□/M9□ before shipment.)

Cautions for Using

1. Use recommended pneumatic circuit.

⚠ Caution

For correct operation of locking or releasing mechanism, use the following pneumatic circuit.

① Do not use a 3-position solenoid valve.

Avoid using circuit with 3-position solenoid valve (especially closed center, metal seal type).

When pressure is trapped in the port with locking mechanism, end lock is free. When utilizing a 3-position closed center valve, even if the lock is engaged, it may become unlocked due to pressure leakage either across the piston or the valve spool.

② Back pressure is required to release lock.

Before starting operation, supply air to side without locking mechanism as figure above. (or side without locking the piston rod for models with locking at both ends.) Otherwise, lock may not be released. (Refer to "Release of lock".)

③ Release lock when mounting or adjusting the cylinder.

If mounting is done with lock engaged, lock may be damaged.

④ Use with load 50% or less of rated capacity.

If cylinder is used over 50% load capacity, lock may be damaged.

⑤ Do not use multiple cylinders synchronously.

Avoid using 2 or more end lock cylinders synchronously to perform a single task because one of the cylinders may not allow lock to release.

⑥ Use a speed controller as meter-out.

Meter-in control may not allow lock to release.

⑦ Use complete stroke or cylinder at side with lock.

If cylinder piston does not reach end of stroke, lock may not be engaged or released.

2. Operating pressure

⚠ Caution

Use pressures 0.15 MPa or more at port with locking mechanism. Otherwise, lock will not be released.

3. Exhaust speed

⚠ Caution

When pressures at port with locking mechanism is decreased to 0.05 MPa or less, it is automatically locked. When exhaust pipe at port with locking mechanism is thin and long or speed controller is distanced from cylinder port, exhaust speed is slow and will require additional time for lock engagement. Clogging the silencer mounted on exhaust port of solenoid valve leads to the same result.

4. Relationship with cushion

⚠ Caution

When cushion valve at side with locking mechanism is fully closed or nearly fully closed, piston rod may not reach the stroke end. Thus lock is not established. And when locking is done with the cushion valve nearly fully closed, adjust the cushion valve since lock may not be released.

5. Release of lock

⚠ Warning

When lock is to be released, supply air pressure to the port without the locking mechanism, this relieves the load from the lock mechanism. (Refer to recommended pneumatic circuit.) When port without lock mechanism is exhausted and locking mechanism is loaded, the lock may be damaged due to excessive force on lock during release. Also, piston rod will operate immediately.

6. Manual release

⚠ Caution

Non-locking type

Insert attached bolt from upper side of rubber cover (no need to remove rubber cover), tighten locking piston and pull bolt, lock will be released. When bolt is released, locking begins to take place. Thread size, required pulling force and stroke are listed below.

Bore size [mm]	Thread size	Pulling force	Stroke [mm]
32	≥ M2.5 x 0.45 x 25 L	4.9 N	2
40, 50, 63	≥ M3 x 0.5 x 30 L	10 N	3
80, 100	≥ M5 x 0.8 x 40 L	24.5 N	3

* Remove bolt under normal operations.
It may cause malfunction of locking and release.

Locking type

Turn 90° counterclockwise while pushing the M/O knob. Lock is released when ▲ on the cap and ▼ OFF mark on the M/O knob correspond. (Lock remains released.)

When locking is desired, turn 90° clockwise while fully pushing the M/O knob and correspond ▲ on the cap and ▲ ON mark on the M/O knob. Confirm the correct position by click sound "click". Otherwise, lock may not be engaged.

[Stainless Steel Mounting Screw]

The following stainless steel mounting screw kit (including set screws) is available. Use it in accordance with the operating environment. (Since the auto switch mounting bracket is not included, order it separately.)

BBA1: For D-A5/A6/F5/J5 types

Note 1) Refer to page 1689 for details on the BBA1.

The above stainless steel screws are used when a cylinder is shipped with the D-F5BA auto switch. When only one auto switch is shipped independently, the BBA1 is attached.

Note 2) When using the D-M9□A(V) or Y7BA, do not use the steel set screws which are included with the auto switch mounting brackets above (BMB5-032, BA7-□□□, BMB4-□□□, BA4-□□□). Order a stainless steel screw kit (BBA1) separately, and use the M4 x 6 L stainless steel set screws included in the BBA1.

• The figure shows the mounting example for the D-M9□(V)/M9□W(V)/M9□A(V)/A9□(V).

Specifications

Ambient temperature range	-10°C to 120°C
Bore size	40, 50, 63, 80, 100
Seal material	Fluororubber
Grease	Heat resistant grease

Warning Precautions

Be aware that smoking cigarettes etc. after your hands have come into contact with the grease used in this cylinder can create a gas that is hazardous to humans.

Specific Product Precautions

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 3 to 12 for Actuator and Auto Switch Precautions.

Adjustment

Warning

1. Do not open the cushion valve beyond the stopper.

Crimping ($\phi 32$) or a retaining ring ($\phi 40$ to $\phi 100$) is provided to prevent the accidental removal of the cushion valve. Do not open the valve beyond the mechanism. If air is supplied, the cushion valve may shoot out from the cover.

Bore size [mm]	Cushion valve width across flats [mm]	Hexagon wrench
32, 40	2.5	JIS 4648 Hexagonal wrench key 2.5
50, 63	3	JIS 4648 Hexagonal wrench key 3
80, 100, 125	4	JIS 4648 Hexagonal wrench key 4

2. Use the air cushion at the end of cylinder stroke.

Select the cylinder with bumper if the cushion valve is to be fully opened. Otherwise, tie-rods or piston assembly may be damaged.

3. When replacing mounting brackets, use a hexagon wrench.

Bore size [mm]		Bolt	Width across flats [mm]	Tightening torque [N·m]
32, 40		MB-32-48-C1247A	4	5.1
50, 63		MB-50-48-C1249A	5	11
80, 100	Foot	MB-80-48AC1251A	6	25
	Others	MB-80-48BC1251A		
125	Foot	CE00008	8	30.1
	Others	CE00032		

4. When replacing mounting brackets, tie-rod nuts on the cylinder body become loosened.

After retightening the tie-rod nuts with the proper tightening torque (Refer to Adjustment 3.), mount a mounting bracket.

5. Do not disassemble the trunnion type cylinder because the mounting precision is required.

It is difficult to align the axial center of the trunnion with the axial center of the cylinder. Thus, if this type of cylinder is disassembled and reassembled, the required dimensional accuracy cannot be attained, which may lead to malfunctions.

With Rod Boot

Handling

Caution

1. Do not turn the piston rod with the rod boot kept locked.

When turning the piston rod, loosen the band once and do not twist the rod boot.

2. Set the breathing hole in the rod boot downward or in the direction that prevents entry of dust or water content.
